REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF SEPTEMBER, 1910

Four hundred and fifty-two deaths were registered this month, twenty-eight more than in September, 1909, and five more than in the same month of 1908. Annual mortality rate in 1909 per thousand of population was 10.70 (estimated population 475,000); this month is 11.41 (estimated population 475,000); in 1908 it was 12.60 (estimated population 425,000).

The following comparative tables will show the deaths from some of the principal causes during the month of September for the past three years.

DEATHS

Table of Deaths, all causes	1908	1909	1910
From—	447	424	452
Tuberculosis	50	42	40
Pneumonia, Lobar	23	16	27
Pneumonia, Broncho	7	8	8
Organic Heart Disease	49	63	58
Cancer (all organs, etc.)	35	34	37
Bright's Disease	21	22	12
Diseases Digestive System	54	40	48
Typhoid Fever	5	5	11
Diphtheria	3	1	6
Scarlet Fever	1	4	
Whooping Cough	3	2	1
Diseases Early Infancy	14	18	6
Old Age	6	11	4
Deaths from Violence	42	37	50

BIRTHS

Births registered total 547 as against 587 in September, 1909, and 515 in the corresponding month of 1908. The annual birth rate in September 1908 was 14.52 (estimated population 425,000); in 1909 it was 14.83 (estimated population 475,000); this month it is 13.81 (estimated population 475,000).

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding months of 1908 and 1909:

	1908	1909	1910
Diphtheria	36	30	30
Scarlet Fever	18	47	26
Smallpox	12		
Measles	31	15	69
Whooping Cough	7	26	26
Mumps	5	18	2
Pneumonia	13	26	43
Chickenpox	7	11	39
Tuberculosis	88	112	93
Typhoid Fever	22	26	*35

*NOTE.—Of these cases seventeen were of local origin and eighteen not local.

It will be noted that there is a decrease in the number of cases of scarlet fever as compared with 1909, and a slight increase over 1908. Smallpox did not develop any cases during the month. Measles shows a considerable increase as compared with the corresponding months of the two years previous, while whooping cough shows the same number of cases as developed in 1909 and nineteen more than in 1908. Chicken pox also shows an increase over the corresponding months of the two previous years. Typhoid fever shows increase over the two previous years, totalling thirty-five cases, seventeen of these being of local origin.

BUREAU OF SANITATION

On September 1st, five additional sanitary inspectors were assigned to duty with a particular view to controlling as far as possible the fly situation. Cards of information regarding flies (a copy of which appeared in the August Bulletin) were posted as follows: In Bakeries, 122; butcher shops, 191; candy stores, 24; delicatessen stores, 61; fish markets, 41; fruit stores, 221; grocery stores, 184; milk depots, 27; poultry stores, 14; restaurants, 447; stables, 322—a total of 1654. Continual inspection and re-inspections will be the rule in this phase of our work, and this plan will no doubt result in greatly minimizing the danger from this source of infection, if it will not entirely eradicate the pest. This is a Health Department work that is receiving a great deal of attention in many cities throughout the United States, and this Department confidently expects to accomplish great things in this direction.

DIVISION OF TRUCK GARDEN INSPECTION

Twenty-two of the fifty-two truck gardens located within the confines of the City and County were inspected during the month, and eight special or re-inspections were also made. The report of the inspection of this Division indicates that but one of these premises has failed to comply with the regulations of this Department, which indicates the true value of the work that has been accomplished in this Division.

One of the chief obstacles with which this Department has met in this particular line of work is the fact that most of these gardens are located on the borders of Islais Creek, which, owing to the lack of proper sewerage facilities in the outlying districts, has been and is receiving discharge from various sewers, thus contaminating the waters of said creek. At a conference held at which were a representative of the District Attorney's office, the City and County Attorney's office, the Health Officer, the Engineer of Sewers of the Board of Public Works, and attorneys representing the truck gardeners, it was stated by the Assistant City Engineer that within ten months the plans will have been perfected, which will enable that Division to begin the work of construction of what is known as Islais Creek Bond Sewer, which will carry off the drainage from various sewers now emptying into said creek. It was further agreed by the attorneys representing the truck gardeners that their clients would not use the waters from this creek for the purpose of sprinkling vegetables, but would be permitted to irrigate the soil and if, in the event that bacteriological analysis of vegetables should show the presence of B. Coli Communis or amoeba, such product would be promptly confiscated. This agreement is to take effect when the present growing crop will be harvested, which will occur sometime during the current month. The District Attorney and City and County Attorney advised the acceptance of this proposition rather than engage in litigation which might eventually result in nullifying the efforts of the Board of Health to correct the conditions existing from the use of the waters of this creek.

DIVISION OF FOOD INSPECTION

In the August report submitted by the Health Officer, it was stated that an ordinance to prohibit the use of aniline dyes and other synthetic compounds of carbon in or upon any article of food, would be submitted to the Board of Supervisors for adoption. Said ordinance was duly submitted and has been returned to the Board of Health for a slight revision and has been placed in the hands of the Assistant District Attorney to be re-written. The terms of this ordinance will compel all manufacturers of candy, ice cream cones, ice cream, bakery products such as cake, etc., to label each separate article with the legend "Artificially Colored" on all material above mentioned which might contain any artificial coloring matter. The manufacturers of carbonated drinks, such as bottled sodas, etc., are all complying with the law of labeling glass containers with an inscription showing that same are artificially colored. It is proposed to apply this rule to all glass containers holding jellies, jams and other preserves.

While the Pure Food Laws of the United States Department of Agriculture permit the use of certain dyes and other artificial coloring matter in certain food products, it is the intention of this Department to rigidly enforce the provisions of the proposed ordinance when same becomes a law, in order to put a stop to the pernicious practice of using poisonous dyes in food stuffs which are consumed in large quantities by young children. It has developed during the course of the inquiry which led up to the drafting of this proposed ordinance, that certain manufacturers in preparing ice cream cones had covered up the evidence of half-cooked or improperly baked cones by dipping them in a preservative containing aniline dyes. This practice obtained merely for economical reasons, as it was found that a properly prepared and thoroughly baked cone became very brittle and consequently was easily subject to breakage. I have every reason to believe that when this ordinance is finally adopted that the practice of saving expense at the cost of the health of the children of this community will be brought to an effectual standstill, as all offenders against the ordinance will be promptly arrested and vigorously prosecuted.

DIVISION OF MARKET INSPECTION

A reference to the report of this Bulletin which appears on page 14 will prove to be of much interest.

On September 1st, 1910, ten additional market inspectors were placed in the field, and the report mentioned will show the assignment of the various inspectors. Under the heading of condemnations and seizures it will be noted that the following was confiscated and destroyed as being unfit for food:

150 lbs. fish; 7825 lbs. beef; 226 calves; 29 sheep; 15 lambs, and 36 hogs.

In addition to this, two beef heads, 157 hog's heads, 677 livers and 135 lbs. pork were coal-oiled, and sent to the reduction works. 871 chickens were also seized and destroyed. These figures will indicate the importance of the work that is now being done in this Division. A comparison of the record of inspections made during the month of August and this month shows that a total of 2686 inspections were made during the month first above mentioned, and 4116 during the ensuing month. In August, 804 market inspections were made, in September 2002; 348 inspections on wharves in August against 527 in September; 75 railroad depot stations in August, 107 in September; 89 commission house inspections in August, 166 in September; 419 Chinatown inspections in August, 445 in September. The number of inspections of food stuffs as shown in the September report indicate an increase of from 15 to 500 per cent. as compared with August, 1910. These figures are given as an indication that the increase in the market inspection force was a move in the right direction, and the results already attained and the future value to be derived from this work will assure the citizens of this city a clean and healthy meat supply.

DIVISION OF DAIRY AND MILK INSPECTION

Ninety-three dairies in other counties were inspected during the month, and 28 dairies and 105 dairy depots within the city limits were also covered. 8006 cows were inspected, 15 placed under quarantine and 5 condemned and killed. 79 milk cans were destroyed as being unfit for further use, and 11 samples of water were taken from various dairies for bacteriological and chemical analysis. 223 samples of milk were taken for analysis, 209 of these being from railroad depots and wharves, ten from dairies and depots, three from milk rooms, and one from restaurants. Fourteen arrests were made during the month and \$160 in fines imposed upon the offenders. For a detailed report of arrests made I would refer you to the record of arrests appearing on page 19 of this Bulletin.

VENTILATION OF NICKELODEONS

A proposed ordinance regulating the proper ventilation of these places of amusement is being drafted with the aid of the Assistant District Attorney, and will be submitted to the Board of Supervisors for their approval and adoption as a law. A personal investigation by the Health Officer revealed the fact that these places of amusement, with but several exceptions, were entirely without any form of ventilation whatever, and the need for the correction of this condition was very apparent. The building law of the City and County while providing for ventilation of stages, etc., in theatres, entirely omitted any allusion to that portion of the structure occupied by the audience. The main feature of this proposed ordinance is indicated in the following language:

"In every building or part of building intended for audience room only as a theatre, hall or nickelodeon, provision shall be made for at least eight square feet of floor space and 200 cubic feet of air space for each occupant to be accommodated therein and supplying at least 30 cubic feet of pure air per minute for each occupant thereof."

When this proposed ordinance becomes a law and is put into effect, the insanitary condition now surrounding the majority of these places of amusement will be abated, and the danger of transmission of many forms of communicable diseases will be reduced to a minimum. The nickelodeon industry in this city has assumed large proportions and is constantly increasing. Hence the urgent necessity of the adoption of an ordinance regulating the proper ventilation of these structures to be made a part of the building law of the City and County.

DIVISION OF SCHOOL MEDICAL INSPECTION

Twenty schools with a total enrollment of 10,712 pupils were visited during the month of September; 158 visits being necessary to cover this work. Forty-five children were excluded from school on account of suffering from various contagious diseases common to childhood. Eleven contacts were also excluded, and 9 were refused further attendance on account of non-vaccination. A reference to the report of this Division, which appears on page 16, will prove to be of much interest.

It is to be regretted that of the eighty-five schools operating in this city, but twenty are under school medical inspection; this owing to the fact, as has already been brought to the attention of the Board, that the force now working, while splendidly organized, and accomplishing great work, is entirely inadequate to the needs of a city of this size. Only those schools which are known to require constant inspection can be covered by our present force, but wherever complaints are received from the Board of Education or the principals of schools with reference to conditions obtaining therein, the Medical Inspector of Schools immediately causes an inspection to be made, and steps are taken to relieve conditions calling for action on his part, even though such schools are not included in the category of those requiring continual supervision.

ARRESTS

The arrests made during the month are shown in tabulated form on page 19 of this Bulletin, and should be referred to in order to readily ascertain the extent of the work which the Department is doing in an effort to enforce sanitary regulations.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF OCTOBER, 1910

Five hundred and seventy-two deaths were registered this month, fifty-four more than in October, 1909, and seventy-four more than in the same month of 1908. Annual mortality rate in 1909 per thousand of population was 13.08 (estimated population 475,000); this month it is 14.44 (estimated population 475,000); in 1908 it was 14.04 (estimated population 425,000).

The following comparative tables will show the deaths from some of the principal causes during the month of October for the past three years.

DEATHS

	1908	1909	1910
Table of Deaths, all causes	498	518	572
From—			
Tuberculosis	54	65	67
Pneumonia, Lobar	23	34	25
Pneumonia, Broncho	14	18	14
Organic Heart Disease	54	74	80
Cancer (all organs, etc.)	29	40	43
Bright's Disease	34	19	31
Diseases Digestive System	45	54	84
Typhoid Fever	10	6	6
Diphtheria	3	—	3
Scarlet Fever	2	1	1
Whooping Cough	2	6	1
Diseases Early Infancy	26	17	19
Old Age	6	8	3
Deaths from External Causes	49	57	38

BIRTHS

Births registered total 583 as against 591 in October, 1909, and 567 in the corresponding month of 1908. The annual birth rate in October, 1908, was 15.96 (estimated population 425,000); in 1909 it was 14.88 (estimated population 475,000); this month it is 14.72 (estimated population 475,000).

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding months in 1908 and 1909.

	1908	1909	1910
Diphtheria	36	31	22
Scarlet Fever	56	33	25
Smallpox	34	—	—
Measles	69	18	36
Whooping Cough	37	36	15
Mumps	13	6	28
Pneumonia	12	50	46
Chickenpox	22	25	52
Tuberculosis	131	132	131
Typhoid Fever	40	†42	*20

†NOTE.—Of these cases 23 were of local origin and 19 not local.

*NOTE.—Of these cases 12 were of local origin and 8 not local.

It will be seen from the above table that the number of cases of diphtheria, scarlet fever and whooping cough have fallen off to a great extent as compared with the two previous years. While measles, mumps, and chickenpox show an increase, typhoid fever shows a marked decrease over the corresponding month for the two preceding years, but eight cases of local origin being reported during the current month.

District No. 3, which embraces Mission and Ocean View, shows the largest number of cases of contagious diseases, these being shown in detail under the report of Division of Sanitary Inspection, which appears on page 12.

District No. 2 (Western Addition, Richmond and Sunset) comes second; District No. 1 (North Beach, Cow Hollow and north of Market Street east of Van Ness Avenue) comes third, while District No. 4 (south of Market Street east of Tenth Street, Potrero and South San Francisco) shows the smallest number of cases.

BUREAU OF SANITATION

One of the most difficult problems with which the Department of Health has ever been confronted is the abatement of the nuisance caused by impounded waters in the territory bounded by Kentucky, Minnesota, Twenty-third and Twenty-fifth streets (familarly known as "The Red Sea"). Owing to solid fills having been made in this district cutting off a portion of the bay, the discharges from plumbing fixtures of approximately one hundred and sixty premises are emptying into this body of water, creating a condition that has caused an intolerable nuisance. Owing to the lack of sewerage facilities in this district the fixtures above mentioned must of a necessity have an outlet, and this pond is the only available place. Conferences have been held by the Board of Health with representatives of various commercial bodies, Improvement Clubs, and City officials, namely the City Engineer's Department, the City and County Attorney, and the District Attorney, with a view to devising some plan whereby the insanitary condition can be remedied. The matter is now in the hands of the City Attorney with a view to drafting an ordinance which will empower the Board of Health to summarily abate nuisances of this character. At a meeting of the Board of Health held on Friday, November 4th, a resolution was adopted condemning the Red Sea as a nuisance. This is the first step in the direction of eventually obliterating this body of water.

ENFORCEMENT OF ANTI-EXPECTORATION ORDINANCE

During this month your Health Officer forwarded a communication to the Chief of Police calling his attention to the general disregard of the provisions of this ordinance, and requesting that he take steps to enforce same. Said official has forwarded a letter to this office enclosing a copy of an order issued to all Company Commanders directing them to instruct patrolmen to this effect, and to arrest all offenders.

A similar communication was sent to the General Manager of the United Railroads, requesting him to aid in the enforcement of the law by causing the arrest of all persons found expectorating in street cars. This gentleman has also written to this office, assuring this Department of his hearty co-operation, and his issued orders to his platform men to this effect.

VENTILATION OF NICKELODEONS

In an endeavor to create better sanitary conditions in these places of amusements, the Police Commission has been requested to withhold the issuance of licenses to applicants, who desire to open such places, until the Health Department has passed upon the question of proper ventilation of these structures. This rule is to include not alone those who apply to open new places, but also to those who may ask for a renewal of their old licenses. The proposed ordinance regulating this feature, which was made mention of in my report for the month of September, is still under consideration by the Board of Supervisors.

DIVISION OF MARKET INSPECTION

In this division a total of 4260 inspections were made, including abbatoirs, markets, wharves, railroad depots, commission houses, and the Chinese quarter. Inspections were made covering one million and fifty-eight thousand pounds of fish, eleven thousand four hundred and thirty-eight beeves, five thousand nine hundred and nine calves, ten thousand one hundred and forty three hogs, one hundred and seven thousand and sixty two sheep, twenty-four thousand and sixty-six lambs, and three hundred and sixty-four thousand two hundred and thirty-one head of poultry. The following articles were seized, condemned and sent to the Sanitary Reduction Works: 3075 lbs. fish; 14,175 lbs. beef; 347 calves; 44 sheep; 8½ lambs; 3 hogs; 1,582 chickens were condemned; 273 hare and 206 head of wild game; 1,252 livers; 301 hog's heads; and 4 beef heads were also confiscated, and destroyed.

DIVISION OF DAIRY AND MILK INSPECTION

During the month thirty-five dairies in this county and eighty-five in other counties were inspected, also 188 dairy depots: total of 308 inspections. 11,640 cows were examined, 18 placed under quarantine and three condemned and killed. 104 milk cans were also condemned as being unfit for further use. 12 samples of water were taken for analysis. 230 samples of milk were taken for chemical and bacteriological analysis; 220 of these being from railroad depots and from wharves, 3 from depots and dairies, 7 from miscellaneous sources. Six arrests were made during the month.

ARRESTS MADE

Twelve arrests were made during the month for violation of health laws, as follows:

One for insanitary garbage wagon; 3 for violation of wire screen ordinance; 1 for violation of the plumbing ordinance; under ordinance regulating disposal of milk; 1 for Two Cow ordinance. Fines amounted to \$130 were imposed on offenders arrested during October, and \$25 on pending cases. At the present time there are ten cases on appeal to the Superior Court where persons have been arrested for violation of the ordinance prohibiting more than two cows to the acre.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF NOVEMBER, 1910

Five hundred and twenty-two deaths were registered this month, 11 less than in November, 1909, and 3 more than in the same month of 1908. Annual mortality rate in 1909 per 1,000 of population was 13.68 (estimated population 475,000). This month it is 13.17 (estimated population 475,000). In 1908 it was 14.64 (estimated population 425,000). The following comparative tables will show the deaths from some of the principal causes during the month of November for the past three years:

DEATHS

Table of Deaths, all causes	1908	1909	1910
From—	519	533	522
Tuberculosis	51	59	59
Pneumonia, Lobar	38	39	26
Pneumonia, Broncho	11	12	11
Organic Heart Disease	69	68	72
Cancer (all organs, etc.)	36	39	46
Bright's Disease	40	34	33
Diseases Digestive System	45	45	62
Typhoid Fever	14	7	6
Diphtheria	4	4	2
Scarlet Fever	4		1
Whooping Cough	1	2	1
Diseases Early Infancy	19	16	14
Old Age	15	13	8
Deaths from External Causes	41	56	42

BIRTHS

Births registered total 570, as against 567 in November, 1909, and 654 in the corresponding month of 1908. The annual birth rate in November, 1908, was 18.36 (estimated population (425,000)). In 1909 it was 14.28 (estimated population 475,000). This month it is 14.40 (estimated population 475,000). The figures given for the month of November, 1908, while showing to be in excess of the other months mentioned, do not necessarily indicate a decrease in the birth rate, as in the first mentioned month an artificial stimulus, as it were, was given to the registration of births owing to the fact that many physicians were compelled to file reports which had apparently been withheld.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month, as compared with the corresponding months in 1908 and 1909:

	1908	1909	1910
Diphtheria	56	37	28
Scarlet Fever	66	50	40
Smallpox	16	4	
Measles	213	42	47
Whooping Cough	19	37	17
Mumps	31	10	89
Pneumonia	18	56	57
Chickenpox	63	55	50
Tuberculosis	94	104	101
Typhoid Fever	30	†28	*25

†NOTE.—Of these cases 22 were of local origin and 6 not local.

*NOTE.—Of these cases 12 were of local origin and 13 not local.

From the above table it will be seen that there is a decrease in the number of diphtheria cases as compared with the two previous years. The same can also be said of scarlet fever. Mumps shows a very large increase over 1909. Typhoid fever shows a decline in the number of cases, but 12 of local origin being reported during the month. During last month (October) 22 cases of local origin were reported.

BUREAU OF SANITATION

Favorable progress can be reported in the case of the nuisance existing in the Potrero District known as the "Red Sea" and treated of in my last monthly report. The Board of Public Works has petitioned the Board of Supervisors to adopt an ordinance authorizing the grading to official grade of the intersecting streets which will stretch across this pond and when this is done the first real step will be taken that will eventually result in the filling up of this body of water. One manufacturing concern which in the past had been emptying 50,000 gallons of water daily into this sea is now engaged in building a sewer to connect with a private sewer emptying into the bay and a number of premises the plumbing fixtures of which are now emptying into this pond have made arrangements to connect with the sewer first above mentioned. When the practice of emptying water etc., into the pond is discontinued it will naturally dry up through evaporation, which process will be materially aided when the solid fill is deposited.

VENTILATION OF NICKELODEONS

This subject was treated of in my last report and since that time the ordinance mentioned therein has been returned to this office for minor amendments, and is still under consideration by the Board of Supervisors. Many of these places of amusement are now being put in shape to comply with the requirements demanding adequate ventilation. This is made possible through the action of the Police Commission who will not issue licenses until a report is submitted by this Department to the effect that the premises comply with our requirements. I have to recommend at this time that a list of the names of the proprietors of these theatres be published showing those who do comply and those who do not.

DIVISION OF TRUCK GARDEN INSPECTION

I have to report that fifteen samples of vegetables taken from various gardens located along the borders of Islais Creek were examined during the month by the Bacteriologist to determine the presence or absence of *B. Coli Communis*, and in every instance the report has read "Absent." This clearly indicates that the agreement made by the growers several months since to not use the waters of said creek for irrigation purposes, is being carried out.

DIVISION OF DAIRY AND MILK INSPECTION

Under this heading I have to report that the dairy of Joseph Kennell, located in San Mateo County, and which has been a source of trouble to this Department for many years, is now being placed in a condition to comply with the requirements of this Board. This party has been a chronic offender for many years. Repeated arrests did not seem to change conditions, as he appeared satisfied to pay his fine and continue in the same old groove. Your Health Officer therefore deemed it necessary to take some decisive action in the matter, and the Dairy Inspectors were directed to confiscate and destroy his product upon its entering the city limits. These orders were followed out and seventy-five gallons of milk were dumped into the gutter. This appeared to have the desired effect, and Mr. Kennell now seems disposed to comply in every detail with the requirements of this Department.

GARBAGE INSPECTION

Your Health Officer during this month has given a great deal of attention to the matter of the disposal of garbage by the City of Oakland, it being the custom for said city to convey this material out to sea in barges and dumping same. It would appear that sufficient precautions have not been taken to tow these barges far enough to prevent the garbage from finding its way back to the shore, with the result that the ocean beach adjacent to our city has been littered with refuse from the city of Oakland. The garbage inspector of this department was directed to proceed to said city and secure information as to the methods of dumping, etc., and was directed to take samples of papers, milk bottle caps, etc., in order to compare same with the samples collected along the beach. A comparison of these articles has shown beyond a reasonable doubt that the conditions as above stated do obtain, and every effort that it is possible to make to prevent the continuance of this practice will be put forth in an endeavor to put an effectual stop to this nuisance.

COPPER IN OYSTERS

One of the Market Inspectors of this department during the month brought in a sample of oyster which, to him, had a strange appearance. Same was submitted to the chemist of this department who discovered evidences of copper. When this result became known the Inspectors of the Food Bureau were directed to bring in other samples and of eight submitted seven have shown the presence of copper in large quantities. All of the samples above mentioned were of oysters shipped into the city from eastern points by the gallon, that is, opened and ready for use. Analyses made of native-grown oysters failed to show the presence of this mineral substance. As soon as the findings of the chemist are published it is proposed to notify the United States Department of Agriculture in this city and also in Washington of the result, and an effort will be made to stop the shipments of this product into the city.

CONFERENCE OF HEALTH OFFICERS AT SAN DIEGO, CAL.

Your Health Officer attended the conference of the League of California Municipalities in the city of San Diego, from November 16th to 19th. At this conference there were present many health officers representing cities throughout the State. Many papers on various subjects relating to Health Department affairs were read, the subject assigned to me being "Garbage Disposal in City and Country by the Crematory Method." A fifteen-minute paper previously prepared on this subject was read and evidently was received with much interest. A general discussion followed, and the result was that much valuable information with regard to this subject was brought out. In due course of time a full transcript of the papers read at this conference will appear in printed form and copies thereof mailed to all Health Departments throughout the State.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF DECEMBER, 1910

Five hundred and twenty-seven deaths were registered this month; 43 less than in November, 1909, and 1 less than in the same month of 1908. Annual mortality rate in 1909 per 1000 of population was 14.40 (estimated population 475,000). This month it is 13.30 (estimated population 475,000). In 1908 it was 14.76 (estimated population 425,000). The following comparative tables will show the deaths from some of the principal causes during the month of December for the past three years.

DEATHS

Table of Deaths, all causes	1908	1909	1910
From—	528	570	527
Tuberculosis	60	65	62
Pneumonia, Lobar	43	28	28
Pneumonia, Broncho	18	18	15
Organic Heart Disease	56	85	86
Cancer (all organs, etc.)	30	61	32
Bright's Disease	29	28	31
Diseases Digestive System	53	41	55
Typhoid Fever	4	4	2
Diphtheria	5	6	2
Scarlet Fever	5	—	2
Whooping Cough	2	5	1
Diseases Early Infancy	17	19	17
Old Age	13	11	4
Deaths from External Causes	56	49	40

BIRTHS

Births registered total 522 as against 548 in December, 1909, and 552 in the corresponding month of 1908. The annual birth rate in December, 1908, was 15.48; in 1909 it was 13.83; this month is 13.17. The number of births registered as compared to the deaths recorded does not necessarily indicate a falling off in the number of births, but it can likely be accounted for on the theory that many physicians and householders fail to report them as the law requires. There does not appear to be any immediate remedy at hand to correct this evil, and it is to be regretted that such conditions obtain.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding months in 1908 and 1909:

	1908	1909	1910
Diphtheria	51	51	32
Scarlet Fever	61	50	43
Smallpox	19	6	4
Measles	241	55	74
Whooping Cough	6	33	15
Mumps	45	1	49
Pneumonia	29	45	40
Chickenpox	60	57	51
Tuberculosis	103	136	134
Typhoid Fever	35	*24	†45

*Of these cases 15 were of local origin and 9 not local.

†Of these cases 28 were of local origin and 17 not local.

A comparison of the figures above given will show a decrease in the number of diphtheria, scarlet fever and small pox cases as compared with the corresponding months of the two previous years. Whooping cough shows a falling off as compared with 1909 and an increase over 1908. Typhoid fever cases show a decided increase over the previous two years and an increase of twenty cases over November, 1910. There does not appear to be any particular reason for the increase in the number of cases of this disease, as investigation of the typhoid fever chart shows that the infection is not confined to any particular locality, but is spread over a wide area. It should be noted, however, that of the 45 cases reported during the month, but 28 were of local origin.

BUREAU OF SANITATION

Special attention has been given this month to an investigation of the so-called Electric Water Heaters. This device heats water or other liquids by immersing same in a vessel and turning on an electric current. Experiments made by the Chemist of the Department demonstrated that the use of these instruments caused a copper deposit to be precipitated into the vessel. This clearly showed that the use of this invention was positively dangerous, especially where it might be used in heating or warming milk to be fed to infants. Your Health Officer at once notified the firms handling these heaters to discontinue the sale of same, under penalty of arrest.

PURE FOOD ORDINANCE

On December 19th the Board of Supervisors passed what is known as Ordinance No. 1426, regulating the manufacture, production, compounding, packing, selling, offering or keeping for sale articles of food or liquor, and prohibiting the adulteration, mislabeling, or misbranding of the same. On December 20th the Mayor attached his signature thereto and this law is now in operation. It follows very closely the terms of the California Pure Food Act, generally known as the "McCartney Law." It was found that this Department was considerably hampered in its attempts to enforce the law while operating under the State statutes, and the adoption of this ordinance has placed the power directly in the hands of the Health Department to act summarily in cases where the law is violated.

DAIRY AND MILK INSPECTION

The Dairy Inspectors of this Department during the month investigated the dairy of F. Mozetti, near Benicia, Cal., with the result that they found fifteen out of eighty-three cows that were being milked, afflicted with tuberculosis. Upon the failure of Mozetti to dispose of the diseased cows and after due notice being given, sixty gallons of milk which had been shipped in by him from Benicia on December 28th, were seized and emptied into the waters of the Bay. On December 29th one hundred and fifty gallons were seized and disposed of in the same manner. On the evening of the same day a further consignment was added to that which had gone before. This has had the effect of shutting out the Mozetto product until such time as he will comply fully with the requirements of this Department. This offender has performed considerable work in the way of cleaning up his dairy, but until the diseased cows are disposed of none of the milk from these premises will be allowed to enter San Francisco. In this connection it might be well to state that the daily milk supply of this city aggregates 26,746 gallons. Of this amount 22,312 gallons are shipped in from outside counties and 4,434 gallons are produced in the County of San Francisco. A very vigilant system of inspection is being maintained with regard to the milk supply, and this will continue without interruption. A tabulated report of the work performed by the Dairy and Milk Inspectors will be found on page 13 of this Bulletin.

CITY PHYSICIAN

During this month the Secretary of the State Board of Health at Sacramento, California, has been furnishing the Department with a list of names of immigrants who had arrived at various Eastern points from cholera-infected ports in Europe, with San Francisco as their ultimate destination. The information furnished by the State Board gives the location by street number of each immigrant, and it is the duty of the City Physician to make a personal inspection of each individual so named, in order to determine if such person is absolutely free from the possibility of cholera infection. This work will be continued indefinitely, and no chances will be taken to permit of the slightest opportunity of this disease taking hold in this city.

PLAGUE SUPPRESSION WORK

Although it is not generally known, much good work is being performed by the U. S. P. H. and M. H. S. force under command of Surgeon Rupert Blue, in the direction of suppressing the rat as a carrier of contagion. The following figures may prove of interest to show the extent of the work that is being performed in this direction. These are for the month of December, 1910.

Premises Inspected	5,062
Houses destroyed	43
Buildings condemned	27
Nuisances abated	559
Poisons placed	104,857
Rats trapped	8,553
Rats found dead	136
Rats identified	8,688
Gophers trapped	3
Mus Norvegicus	5,510
Mus Rattus	816
Mus Musculus	1,641
Mus Alexandrinus	722
Rats examined bacteriologically (negative)	6,605
Total rats infected to date	398
Gophers examined bacteriologically (negative)	2
Average number traps set daily	7,427
Date of last case of human plague, January 30, 1908.	
Date last case of rodent plague trapped, October 23, 1908.	

COPPER IN OYSTERS

Following up my mention in the November report of the presence of copper in oysters I will state that during this month 13 samples of this product were analyzed, with the result that copper was found in 12 cases. The work so far in this direction is really but of a preliminary character, as the investigation of this product is only in its first stages. In due course of time complete detailed reports will be submitted by the Chief Chemist and will be treated of in this Bulletin. The result so far attained has had the effect of stirring up the oyster dealers, especially the shippers from outside points (particularly on the Atlantic Coast), and these people appear to have awakened to the fact that there is something radically wrong with their product and will doubtless make efforts to remedy the evil.

CHEMICAL LABORATORY—Continued

WATER

Following are tabulated results of the examination of the samples of water from the properties of the Spring Valley Water Company, Golden Gate Park Water Works, and two miscellaneous samples.

REPORT OF ANALYSIS OF SAMPLES OF WATER FROM THE PROPERTIES OF THE SPRING VALLEY WATER COMPANY FOR THE MONTH OF DECEMBER, 1910

(Parts per 1,000,000)

Laboratory No.	SOURCE	Date 1910	Clear or Turbid	Total Solids	Loss on Ignition	Fixed Residue	Chlorine	Nitrogen as				Oxygen Consumed	REMARKS. DEPTH AT WHICH SAMPLES TAKEN—
								Nitrites	Nitrates	Free Ammonia	Albuminoid Ammonia		
131	Clarendon Heights Reservoir.....	Dec. 6	Clear	288	54	234	24	None	0.4	.024	.104	1	6' 9"
132	Clay Street Tank.....	Dec. 6	Clear	277	74	203	24	None	0.3	.014	.108	1	8' 9"
133	Presidio Heights Tank.....	Dec. 6	Clear	290	81	209	24	None	0.5	.022	.096	1	24' 6"
134	Lombard Street Reservoir.....	Dec. 6	Clear	246	50	196	40	.001	Trace	.032	.130	2	13' 4"
135	Francisco Street Reservoir.....	Dec. 6	Slight turbidity	281	68	213	25	None	Trace	.036	.106	1	2' 0"
136	Potrero Heights Reservoir.....	Dec. 6	Clear	147	49	98	27	.002	0.4	.016	.190	2	18' 0"
137	College Hill Reservoir.....	Dec. 6	Clear	282	69	213	22	None	None	.024	.202	2	14' 2"
138	University Mound Reservoir.....	Dec. 6	Turbid.....	288	70	218	24	None	0.6	.032	.188	1	16' 1"
139	South Lake Merced.....	Dec. 6	Turbid.....	290	79	211	61	None	None	.040	.466	5	16' 5"
140	North Lake Merced.....	Dec. 6	Turbid.....	246	59	187	62	None	None	.018	.466	6	17' 0"
141	Lake Honda.....	Dec. 6	Clear	277	71	206	49	.005	None	.026	.334	3	27' 0"

GOLDEN GATE PARK WATER WORKS

142*	Well Water, McLaren's Residence....	Dec. 15	Slight turbidity	426	150	236	40	None	12.5	.008	.128	1	27' 10"
143	Well, Golden Gate Park.....	Dec. 15	Clear	404	192	212	37	0.025	15.	.016	.092	1	
144	Children's Playground.....	Dec. 15	Turbid.....	280	90	190	56	None	None	.080	.312	2	
*Too high in nitrates.													

MISCELLANEOUS SAMPLES

145	Greenwich Street.....	Dec. 22	Pink & turbid ..	452	168	284	80		Present				H.S none, Odor, earthy.
146	Mrs. Leason, 3912 23rd St.....	Dec. 23					80						H.S none, Odor, earthy; no sewer contamination.

RECORD OF ARRESTS

Pending at Last Report

OFFICERS

M. TIERNEY and
H. PROWSE.

Arrested	NAME	VIOLATION	COMPLAINANT	JUDGE	DISPOSITION

Aug. 29	Bernard Cassou	Ord. 731	O'Connor	Conlan	Pending on Appeal to Sup. Ct.	
Aug. 31	Albert Engel	Ord. 731	O'Connor	Weller	Pending on Appeal to Sup. Ct.	
Aug. 31	Sam Aftergut	Ord. 731	O'Connor	Shortall	Pending on Appeal to Sup. Ct.	
Oct. 5	Jacob Bergman	Ord. 731	O'Connor	Shortall	Pending on Appeal to Sup. Ct.	
Nov. 9	M. M. Esperanza	Ord. 660	Lydon	Conlan		Case dismissed Dec. 23th.
Nov. 18	E. T. Azevedo	Ord. 660	O'Connor	Shortall		Case dismissed Dec. 17th.
Nov. 21	J. Cardoza	Ord. 660	Lydon	Deasy		Case dismissed Dec. 15th.
Nov. 29	E. O. Stewart	Sec. 373a penal code	Curtis	Deasy	Continued to January 6th.	
Nov. 30	Hippolyte Lapachet	Ord. 660	Murphy	Weller		Case dismissed Dec. 14th.

Arrested During the Month

Dec. 1	John Buhle	Ord. 660	O'Connor	Weller		Found guilty and fined \$25 Dec. 9.
Dec. 1	Henry Annixter	Ord. 660	Lydon	Conlan		Case dismissed Dec. 16th.
Dec. 1	Leo Anthenien	Ord. 660	Lendrum	Flood		Found guilty and fined \$10 Dec. 14.
Dec. 1	Manuel Silveira	Ord. 660	O'Connor	Weller		Found guilty and fined \$10 Dec. 2.
Dec. 1	L. Sartori	Ord. 660	Murphy	Shortall		Case dismissed Dec. 7th.
Dec. 1	Hippolyte Lapachet	Ord. 660	Lydon	Flood		Found guilty and fined \$25 Dec. 17.
Dec. 1	P. Torre	Ord. 660	Lydon	Conlan		Found guilty and fined \$25 Dec. 2.
Dec. 1	Chas. Poppiano	Ord. 660	Murphy	Conlan		Found guilty and fined \$25 Dec. 2.
Dec. 3	Patrick McGee	Ord. 660	Lydon	Weller		Case dismissed Dec. 12.
Dec. 3	H. C. Lunt	Ord. 660	O'Connor	Conlan		Case dismissed Dec. 16.
Dec. 3	Frank Mozetti	Ord. 660	Murphy	Weller		Found guilty and fined \$25 Dec. 7.
Dec. 3	John Beresini	Ord. 660	Murphy	Weller		Found guilty and fined \$25 Dec. 7.
Dec. 3	Frank LaBrucherie	Ord. 660	O'Connor	Weller		Found guilty and fined \$10 Dec. 5.
Dec. 3	Henry T. Porter	Ord. 1008 (Sec. 197)	Prowse	Flood	Continued to January 13th.	
Dec. 5	Henry C. Melone	Ord. 660	Lendrum	Flood		Case dismissed Dec. 6.
Dec. 5	Geo. Kaplanas	Ord. 13	Lydon	Conlan		Case dismissed Dec. 6.
Dec. 5	Geo. Hirt	Ord. 660	Lendrum	Weller		Found guilty and fined \$10 Dec. 9.
Dec. 8	J. A. Christen	Ord. 660	O'Connor	Flood		Found guilty and fined \$10 Dec. 9.
Dec. 9	Bert Davis	Ord. 660	O'Connor	Flood		Found guilty and fined \$10 Dec. 10.
Dec. 9	Edward Leach	Ord. 660	O'Connor	Weller		Case dismissed Dec. 17.
Dec. 9	B. Epp	Ord. 660	Lendrum	Conlan		Case dismissed Dec. 10.
Dec. 9	Mike Compagno	Ord. 162	O. Miller	Weller		Found guilty and sentenced 30 days.
Dec. 10	G. DeMartini	Ord. 65	O'Neill	Flood		Case dismissed Dec. 12.
Dec. 13	Leo Anthenien	Ord. 660	Lendrum	Conlan		Found guilty and fined \$25 Dec. 14.
Dec. 19	N. Campi	Ord. 65	O'Neill	Flood		Case dismissed Dec. 20.
Dec. 19	Geo. Prattis	Ord. 13	Murphy	Flood		Case dismissed Dec. 20.
Dec. 19	Geo. Braggi	Ord. 13	Lydon	Conlan		Case dismissed Dec. 20.
Dec. 19	Henry Miller	Ord. 13	Lydon	Conlan		Case dismissed Dec. 20.
Dec. 19	John T. Quarles	Ord. 660	O'Connor	Shortall		Case dismissed Dec. 20.
Dec. 19	G. Stamos	Ord. 13	Murphy	Flood		Case dismissed Dec. 20.
Dec. 20	O. Dell Osso	Ord. 13	Lydon	Conlan		Case dismissed Dec. 21.
Dec. 21	Dan Lynch	Ord. 13	Murphy	Weller		Case dismissed Dec. 22.
Dec. 22	Frank LaBrucherie	Ord. 660	O'Connor	Weller		Found guilty and fined \$10 Dec. 23.
Dec. 22	Barney Cassou	Ord. 660	Lendrum	Flood		Case dismissed Dec. 29.

Ordinance Numbers Defined

- 13 Screen Ordinance.
65 Regulating character of garbage wagons.
162 Regulating the gathering and sale of water cress.
373a Penal Code. Maintaining a nuisance.
660 Providing for inspection of milk in dairies.
731 Dairies (2 cows to the acre).
1008 (Sec. 197) Regulating the construction of stables.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF JANUARY, 1911.

Six hundred and fifteen deaths were registered this month; 14 more than in January, 1910, and 62 more than in the same month of 1909. Annual mortality rate in 1910 per one thousand population was 15.18 (estimated population 475,000). This month it is 15.52 (estimated population 475,000). In 1909 it was 13.92 (estimated population 475,000). The following comparative tables will show the total deaths from all causes during the month of January for the past three years, also those from some of the principal causes.

DEATHS

	1909	1910	1911
Table of Deaths, all causes	553	601	615
From—			
Tuberculosis	64	83	63
Pneumonia, Lobar	32	51	53
Pneumonia, Broncho	18	17	22
Organic Heart Disease	64	85	101
Cancer (all organs, etc.)	35	38	42
Bright's Disease	42	29	29
Diseases Digestive System	37	44	38
Typhoid Fever	3	1	8
Diphtheria	5	2	2
Scarlet Fever	2	—	3
Whooping Cough	4	1	4
Diseases Early Infancy	30	22	12
Old Age	10	14	7
Deaths from External Causes	46	68	57

BIRTHS

Births registered total 518 as against 511 in January, 1910, and 579 in the corresponding month of 1909. The annual birth rate in January, 1909, was 14.52. In 1910 it was 12.91. This month it is 13.08. It will be noted that 97 more deaths were recorded than there were births registered, which is clearly an indication that all of the births occurring in this city are not filed for record in this office.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding months in 1909-1910:

	1909	1910	1911
Diphtheria	53	55	40
Scarlet Fever	47	59	79
Smallpox	4	4	6
Measles	272	81	57
Whooping Cough	37	58	16
Mumps	42	2	55
Pneumonia	22	78	50
Chickenpox	70	65	52
Tuberculosis	121	170	124
Typhoid Fever	13	*24	†20

*Of these cases 13 were of local origin and 4 not local.

†Of these cases 9 were of local origin and 11 not local.

Diphtheria shows a decrease as compared with the corresponding months of the two previous years. Scarlet fever shows an increase in the number of cases. There does not appear to be any particular foci of infection in these diseases, as the cases are scattered over a wide area. Measles and whooping cough show a marked falling off in the number of cases, while mumps shows an increase. The number of chicken pox cases have been reduced. Typhoid fever shows a slight increase over the previous years, 20 cases having been reported, of which 9 were of local origin. It should be borne in mind that school medical inspection is a very important factor in making comparisons of cases reported, etc., as many of these communicable diseases are discovered by the nurses that would perhaps not otherwise be reported to this office.

SCHOOL MEDICAL INSPECTION

Through the action of the Board of Supervisors in furnishing additional funds for the purpose of employing six additional women inspectors of schools, this department will now be able to enlarge to a great extent the scope of this most important work. At present 4 nurses cover 19 schools. With the addition of the 6 mentioned above it is calculated that 40 schools of the 85 now operating will be covered by medical inspection. Our experience in this work has demonstrated the value of this character of inspection, and the increased cost will make it possible to minimize to a very great extent the dissemination of infectious diseases, particularly those common to childhood. A reference to the report of this division, which appears on page 16 of this Bulletin, will clearly indicate that the claims made as to the importance and value of this work are not overestimated.

DAIRY AND MILK INSPECTION

Attention is respectfully called to the report of the Chemist appearing on page 17, and the record of arrest appearing on page 19 of this Bulletin, in order to indicate the work that is being performed by this division in an effort to insure pure milk to the citizens of this city. Samples of milk have been freely taken from all sources, and a large number of warrants for arrest have been issued. On January 3rd, 70 samples were taken, and of this number 5 were found below standard. These samples were taken from the Ferry Depot. On January 6th, 53 samples were taken from ship-

ments arriving from San Mateo and Santa Clara Counties, 4 of these were found below standard, one containing much water. On January 7th, an inspection of restaurants, hotels, grocery and delicatessen stores, likewise milk depots, was started, and the Mission district was given particular attention, as reports indicated that considerable watering was being indulged in. The result of this campaign was that 3 restaurant keepers and 8 store keepers were arrested, all on charges of watering milk. On January 30th 38 samples of milk obtained from grocery stores showed that but three were below standard, indicating that the persistent campaign waged against milk dealers who had been in the habit of watering their milk, was having the desired effect. This work will continue, and there will be no let-up in our efforts to insure a pure milk supply to this city.

In this connection it might be well to mention that the enforcement of the "Two-Cow Ordinance" has been practically nullified for the time being, owing to the fact that a contest is now being waged in the courts by the several dairymen interested in maintaining their dairies within the city limits. One of these dairymen was arrested some months ago and was fined \$100 in the police court, but appealed from the decision of said court and the matter must now be decided by the Superior Court. Meanwhile the hands of this department are tied, and we must wait until the courts decide the matter before we can enforce the provisions of this ordinance, which was originally created on the belief that cows within the city limits are not alone a nuisance, but tend to retard its expansion.

BUREAU OF TROPICAL MEDICINE.

In compliance with the recommendation made by the Health Officer some months ago, at which time the Bureau of Tropical Medicine was created, Dr. Herbert Gunn, a former Health Officer and an eminent expert in the study of tropical diseases, was appointed to fill said chair, to take effect February 1st, 1911. He will conduct research work along these particular lines, and will be afforded the use of the Bacteriological Laboratory of this department for said purpose. This is a very important step at this particular time, owing to the fact that the Panama-Pacific Exposition is now an assured fact, and the appointment of this official means that this department will be in a position to maintain a strict surveillance over all cases of imported tropical diseases, and so situated as to readily check any invasion from that source.

RED PLAGUE SUPPRESSION WORK

The Department of Public Health has taken up very vigorously the most important work of medical regulation of diseases of a venereal character, and to that end has formulated a set of regulations fixing certain boundaries wherein it will be possible to segregate that class of individuals who, through the nature of their habits, tend to disseminate this class of diseases; in addition to this attempted segregation, it is proposed to establish medical clinics at various points for the purpose of examination, both physical and microscopical, of all persons coming within the meaning of the regulations, such examination to be had at regular intervals, etc. This work is practically at this time in the embryo stage and when fully developed and carried into practical execution will be given the amount of space that its importance requires.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF FEBRUARY, 1911.

Five hundred and five deaths were registered this month; 3 more than in February 1910,, and 26 less than in the same month of 1909. Annual mortality rate in 1910 per one thousand population 12.67 (estimated population 475,000). This month it is 12.75 (estimated population 475,000.) In 1909 it was 11.38 (estimated population 475,000). The following comparative tables will show the total deaths from all causes during the month of February for the past three years, also those from some of the principal causes.

DEATHS

	1909	1910	1911
Table of Deaths, all causes	531	502	505
From—			
Tuberculosis	55	56	56
Pneumonia, Lobar	23	30	27
Pneumonia, Broncho	14	13	23
Organic Heart Disease	68	58	91
Cancer (all organs, etc.)	39	37	28
Bright's Disease	39	30	23
Diseases Digestive System	37	43	37
Typhoid Fever	3	2	5
Diphtheria	6	3	2
Scarlet Fever	1		
Whooping Cough	3	3	1
Diseases Early Infancy	29	24	14
Old Age	16	10	5
Deaths from External Causes	51	53	48

BIRTHS

Births registered total 489 as against 501 in February 1910, and 597 in the corresponding month of 1909. The annual birth rate in February, 1909, was 12.72. In 1910 it was 12.64. This month it is 12.34. When compared with the death rate per 1000 these figures certainly do not indicate on their face that all births are being reported.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding months in 1909-1910:

	1909	1910	1911
Diphtheria	54	79	25
Scarlet Fever	25	60	47
Smallpox	8	10	1
Measles	348	96	92
Whooping Cough	20	28	27
Mumps	75	7	49
Pneumonia	23	47	35
Chickenpox	61	65	67
Tuberculosis	112	124	95
Typhoid Fever	6	*17	†10

*Of these cases 14 were of local origin and 3 not local.

†Of these cases 7 were of local origin and 3 not local.

A comparison of the above figures will show very satisfactory health conditions so far as the contagious diseases common to children are concerned. The number of diphtheria cases showing a marked decline as compared to 1909-1910. Scarlet fever shows a reduced number of cases as compared to 1910, and an increase over 1909. The number of cases of smallpox are practically nil. But ten cases of typhoid fever were reported during the month, 7 of these being of local origin. With the increased force at our command for medical inspection of schools it is expected that the danger of contagion among school children and especially with reference to the principal contagious diseases will be greatly minimized.

SCHOOL MEDICAL INSPECTION

Ten Health Inspectresses of Schools are now at work, six of these having been recently appointed, and who are rapidly familiarizing themselves with the duties of their position. Thirty-four schools are now being covered and the result of this work is making itself felt and is especially perceptible in the increased number of children applying for admission to school after being excluded on account of suffering from contagious disease and where no physician had been in attendance. Through the medium of this inspection many children suffering from disease, especially those of a contagious character, are discovered in attendance at school, thus proving a prolific source of dissemination of contagion. The report of the division of school medical inspection appearing on page 16 will show that 108 children were excluded during this month, 31 of these being contacts. The report for February does not include the work of all the nurses but will prove a fair index as to what is being done in this division.

DAIRY AND MILK INSPECTION

We are still carrying on the good work of insuring pure milk for the citizens of this city. Reports of these divisions appearing on page 13 of this Bulletin, will clearly indicate what is being accomplished in this direction. Likewise the report of the Chemist appearing on page 18. Also the record of arrests on page 19. One offender, who had insisted upon persistently violating the law prohibiting the watering of milk was fined \$200.00, and the Judge stated from the Bench that this was only an initial movement in this direction. I have reason to believe that this action will have a very salutary effect on other dealers similarly inclined, and continued efforts will be made to apprehend all offenders.

DIVISION OF FOOD INSPECTION.

During this month the food inspectors directed their attention to the violators of the new pure food ordinance, with the result that three offenders were brought before the Board of Health instructed as to the provisions of the law and were dismissed with a reprimand, this being their first offense. More citations to appear will follow and this policy will become a permanent feature of the work of this department. Where warnings are given and offenses follow, prompt measures will be taken to vigorously prosecute all violators of this law.

BUREAU OF TROPICAL MEDICINE.

Advices having reached this office that two cases of Asiatic cholera had been discovered in Honolulu, your Health Officer deemed it expedient to call the attention of the practicing physicians of this city to the matter with a view to having them closely observe any cases that might possibly show the symptoms of this dread disease. To this end postal cards were prepared and mailed to every practicing physician in this city reading as follows:

NOTICE TO PHYSICIANS.

On account of the appearance of cholera in the Hawaiian Islands, Physicians of San Francisco are warned to be especially on the alert for cases having great prostration, vomiting and diarrhea.

Suspicious cases should be reported at once to the Department of Public Health.

(Signed) W. F. McNUTT, JR.,
Health Officer.

RED PLAGUE SUPPRESSION WORK.

As mentioned in the January Bulletin, this feature of Health Department Work is now rapidly approaching the completion of its initiatory stage. A municipal clinic is to be opened about the 20th of March, same to be in charge of two physicians, one nurse and one clerk. The regulations call for two examinations per week for which a nominal fee will be charged. Boundaries have been set wherein a certain class shall confine their activities. A most thorough and comprehensive system of registration and identification is being inaugurated and while the movement may be said to be an absolutely new one in this city, it bids fair to meet with unqualified success, as the most representative people and the very best element of the city's business men are heartily in accord with the Board of Health in this great work. As this movement makes progress, due space will be accorded in this publication.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF MARCH, 1911.

Five hundred and seventy-one deaths were registered this month; 12 less than in March 1910, and 8 less than in the same month of 1909. Annual mortality rate in 1910 per one thousand population 14.72 (estimated population 475,000). This month it is 14.42 (estimated population 475,000). In 1909 it was 14.44 (estimated population 475,000). The following comparative tables will show the total deaths from all causes during the month of March for the past three years, also those from some of the principal causes.

DEATHS

Table of Deaths, all causes	1909	1910	1911
From—	579	583	571
Tuberculosis	80	80	58
Pneumonia, Lobar	42	34	32
Pneumonia, Broncho	17	22	15
Organic Heart Disease	74	84	92
Cancer (all organs, etc.)	39	43	30
Bright's Disease	41	30	43
Diseases Digestive System	42	40	41
Typhoid Fever	6	5	1
Diphtheria	4	3	1
Scarlet Fever	3	...	4
Whooping Cough	2	4	3
Diseases Early Infancy	14	20	16
Old Age	12	12	7
Deaths from External Causes	50	47	54

BIRTHS

Births registered total 583 against 581 in March, 1910 and 589 in the corresponding month of 1909. The annual birth rate in March 1909 was 14.88. In 1910 it was 14.67. This month it is 14.72.

A comparison of these figures will prove interesting inasmuch as the totals for the month of March during the past three years vary but little indicating that the rate appears to be somewhat normal, although, as heretofore stated, we have every reason to believe that many births that occur are never registered in this office. The theory on which this statement is based is that in comparing the number of deaths recorded and births registered in various European cities, where the system of birth registration is supposed to be absolutely perfect shows that usually the number of births exceeds by far the number of deaths.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding months in 1909-1910:

	1909	1910	1911
Diphtheria	65	55	23
Scarlet Fever	66	41	88
Smallpox	3	8	...
Measles	368	230	149
Whooping Cough	37	41	77
Mumps	111	8	12
Pneumonia	51	47	47
Chickenpox	28	148	119
Tuberculosis	186	161	117
Typhoid Fever	21	*25	†11

*Of these cases 22 were of local origin and 3 not local.

†Of these cases 4 were of local origin and 7 not local.

A reading of the above figures will indicate that number of diphtheria cases show a material falling off as compared to the two previous years while scarlet fever shows a decided increase in the number of cases. In the latter diseases there does not appear to be any particular foci of infection, the cases reported covering nearly every section of the city. District No. 2 (Western Addition, Richmond and Sunset) showing 34 cases; District No. 3 (Mission and Ocean View) showing 30 cases; District No. 1 (North Beach and North of Market St.) 17 cases, and the district south of Market Street, (Potrero and South San Francisco) 7 cases.

The report shows that the city is absolutely free from smallpox cases.

Measles shows a marked decline as compared to the two previous years. Whooping cough, and mumps an increase. The report on typhoid fever cases is of a very satisfactory character as it indicates a decided falling off as compared to the previous years, but four cases of local origin being reported during the month.

SCHOOL MEDICAL INSPECTION

Special attention is directed to page 16 of this Bulletin containing the report of School Medical Inspection as conducted with the additional force of Health Inspectresses of Schools, who were recently appointed. Much has been said and can be said of the value of this great and important work, but the best evidence of what is really being accomplished by this Department is shown in the tabulated results as set forth in said report. This department is entertaining strong hopes that when the Budget for the fiscal year 1911-1912 is created on July 1st, that provision will be made for the employment of six additional Inspectresses which will give us a complete working force covering every school throughout the city.

DAIRY AND MILK INSPECTION

Owing to the excessive inclemency of the weather which renders travel throughout the country difficult and at times impossible the work on inspection of outside dairies was necessarily curtailed. Twenty-three dairies in other counties being inspected and eighty-three within the city limits. 129 dairy depots were inspected and ten thousand two hundred and twelve cows were passed upon. 33 cows were placed under quarantine, five were condemned and killed. 104 milk cans found unfit for further use were destroyed. 13 arrests were made, all of the cases still pending. 345 inspections were made by the Milk Inspection division; i. e. Milk wagons 67, depots and dairies 67, Railroad depots and wharves 210; and samples taken in each case. The report of the Chemist which appears on page 17 will show the result of this work. 9 arrests were made during the month; 4 convictions were had, 4 cases were dismissed, 1 still pending. Fines aggregating \$70 were imposed upon offenders.

DIVISION OF FOOD AND MARKET INSPECTION.

For particulars of work performed in these divisions attention is called to pages 13 and 14 of this Bulletin. The Market inspection corps being filled to its full quota, is doing splendid work as the figures will indicate. The Food Inspection Bureau is woefully handicapped owing to the fact that two inspectors are charged with the duty of inspecting the food supply of a city containing approximately between 425,000 and 450,000 inhabitants. The Board of Supervisors have been requested to make provision for the employment of seven additional inspectors in this division after July 1st, and it is to be hoped that the request will be granted. If this be done then the provisions of Ordinance 1426, known as the "Pure Food Law" might be enforced to better advantage.

VARICELLA VERSUS SMALLPOX.

During this month the Visiting Physician of the Isolation Hospital submitted a report to the effect that the Physicians of San Francisco did not seem to appreciate the fact that Varicella is a reportable disease and as a result many children are kept at home for a few days and then returned to school, carrying disease with them, with the result that epidemic follows. In the Golden Gate School there had been a great many cases which were the result of neglect of physicians to notify the department. Chicken pox is not necessarily dangerous to life but it is a detriment to school children on account of the numbers that must be excluded when found suffering therefrom. Experience has demonstrated that it is not always easy to differentiate offhand between chicken pox and small pox, and as a matter of absolute safety and precaution to the citizens of this community physicians must conform to the law requiring reporting of cases of varicella coming under their observation within 24 hours after seeing the case. In all cases of reported varicella the Visiting Physician of the Isolation Hospital immediately proceeds to investigate the case in order to determine that there can be no mistake in the diagnosis. Physicians are expected to and we demand of them that they co-operate with us in the work of preventing the spread of infection.

RED PLAGUE SUPPRESSION WORK.

The Municipal Clinic for the medical regulation of diseases of a venereal character is now an assured fact and the work is in full swing. This clinic was opened on March 21st, and up to the 31st day of the same month 662 cases were registered; 751 examinations were made and 322 treatments administered. 72 cases of infected individuals is the sum total for the first ten days inspection. The clinic which at first was intended to be in charge of two physicians, one clerk and one nurse has already developed to such an extent as to require the services of three clerks, two nurses, 1 matron and an unlimited number of physicians, all with the exception of two being volunteers. All concerned show a most commendable appreciation of the value of the work and have co-operated very freely with the officials of the clinic in furthering its food efforts. In the forthcoming April report more complete particulars will be furnished and without a doubt will show a wonderful advance in this very important feature of health work.

The methods of registration, identification, etc. have been worked out in the most minute detail and a system is now in effect that will no doubt form the basis of a world wide movement in this direction.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF APRIL, 1911.

Five hundred and two deaths were registered this month, 36 less than in April, 1910, and 11 less than in the same month of 1909. Annual mortality rate in 1910 per 1,000 population, 13.56 (est. pop. 475,000). This month it is 12.67 (est. pop. 475,000). In 1909 it was 12.96 (est. pop. 475,000). The following comparative tables will show the total deaths from all causes during the month of April for the past three years, also those from some of the principal causes.

DEATHS

Table of Deaths, all causes	1909	1910	1911
From—	513	538	502
Tuberculosis	67	81	63
Pneumonia, Lobar	31	30	14
Pneumonia, Broncho	12	14	8
Organic Heart Disease	72	84	78
Cancer (all organs, etc.)	36	29	36
Bright's Disease	27	32	40
Diseases Digestive System	36	41	45
Typhoid Fever		6	3
Diphtheria	8	3	1
Scarlet Fever			2
Whooping Cough	5	3	1
Diseases Early Infancy	16	7	20
Old Age	14	14	4
Deaths from External Causes	56	55	35

BIRTHS

Births registered total 518, against 532 in April, 1910, and 511 in the corresponding month of 1909. The annual birth rate in April, 1909, was 12.84. In 1910 it was 13.44. This month it is 13.08.

The closeness of the foregoing figures would indicate that these are normal registrations, though without a doubt many births occur that never go on record, owing to carelessness on the part of those whose duty it is to report same.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month, as compared with the corresponding months in 1909-1910.

	1909	1910	1911
Diphtheria	69	60	22
Scarlet Fever	51	36	73
Smallpox	1	5	
Measles	204	199	166
Whooping Cough	50	31	58
Mumps	60	18	113
Pneumonia	42	43	24
Chickenpox	42	72	79
Tuberculosis	157	144	81
Typhoid Fever	11	*16	†23

*Of these cases 10 were of local origin and 6 not local.

†Of these cases 8 were of local origin and 15 not local.

Diphtheria shows a steady decline in the number of cases, as compared to the two years previous, while scarlet fever still shows an upward trend, though there are 15 cases less reported this month than in the month of March just closed.

Measles shows an increase of 17 cases reported over the preceding month, whooping cough 19 cases less. Mumps took an upward leap during this month, 113 cases being reported, as against 12 for March. Chickenpox also shows a decline, as 40 cases less were reported for April than in March. Typhoid fever, while showing an increase of 12 cases over the previous month, has but eight cases of local origin to its credit. The city still shows that it is free from smallpox, as not-one case was discovered during the month.

SCHOOL MEDICAL INSPECTION

As usual, this phase of our work proves to be of considerable interest, and a reference to Page 16 of this Bulletin will indicate that splendid work is being performed in this division. The intelligent co-operation of this division with the Sanitary Inspection Corps has rendered it possible to locate every case of contagious disease common to children attending school, and thus minimizing the danger of spread of infection.

DAIRY AND MILK INSPECTION.

The tabulated report of these divisions appears on Page 13 of this Bulletin and will show clearly the amount of work that is being performed by the Inspectors engaged in this work. It will be noted that one fine of \$300 was imposed, this being in the case of a persistent offender who had been arrested frequently for watering milk.

This sort of co-operation on the part of the Police Courts is highly commendable and will, without a doubt, have a deterrent effect on many violators of this class.

DIVISION OF FOOD, MARKET AND PLUMBING INSPECTION.

The reports of these Divisions are given in full under their various captions in the body of this Bulletin and should be consulted in order to get an idea of the character of work that is being performed by this department in these different branches.

DIVISION OF INDUSTRIAL INSPECTION.

Not the least important part of our work is devoted to the inspection and sanitary regulation of various factories, where many people are employed and where foodstuffs and other commodities are handled and prepared for human use. The report of this Division appearing on Page 15 will prove to be of interest.

BUREAU OF TROPICAL MEDICINE.

As has been before mentioned, the Bureau of Tropical Medicine was established in January of this year, for the purpose of obtaining information regarding tropical diseases which may be imported into the United States through this port. The work of the physician in charge of this Bureau presented itself in the following form:

1. Estimate of number of cases arriving in San Francisco.
2. Determination of infectiousness of such cases.
3. Development of some plan to control the spread of such diseases.

The work accomplished to date can be summed up as follows:

A clinic has been established, where cases may be seen three mornings a week, and a regular examination is made of a certain class of cases entering the City and County Hospital. In addition, a large number of people recently arrived from the tropics have been examined. Among the diseases thus far encountered may be mentioned Filariasis, Malaria, Beri-Beri, Amebic Dysentery and Uncinariasis. Exact data as to the percentage of those infected cannot yet be given, owing to the fact that many of the examinations have not yet been completed.

RED PLAGUE SUPPRESSION WORK.

The best idea that can be given as to the work that is being accomplished in this direction can be gained by the following extracts from the report of the Chief Clerk in charge of the Clinic. This covers the period to April 10th, 1911.

To the Honorable, The Board of Health.

Gentlemen:—

The Municipal Clinic, organized under your direction, in accordance with the ordinances of the Board of Health, for the examination and treatment of persons whose mode of life renders them liable to contract and spread venereal disease, was opened for business March 21st, 1911, at 682 Commercial Street.

The original force, as provided for, consisted of two physicians, one trained nurse, a matron and a clerk. The first few days demonstrated the fact that this force was inadequate to meet the demands that would be made upon it. In consequence, the Clinic offices were enlarged, and the force accordingly.

As it is now in existence, the Clinic consists of an outer office, where cases enter for treatment; a clerical office, a waiting room for the persons who are to be registered or examined, seven examination rooms equipped with surgical tables, etc.; a complete bacteriological department for the microscopical examinations, another waiting room for cases, where they are held pending the report of the physician and bacteriologist, and an exit office.

The force consists of one chief clinician and three assistants, one bacteriologist, a chief nurse and one assistant, a matron and a janitress, and a clerk and two assistants.

Owing to the limited facilities at the start, we were obliged to set the dates for examination of each case at from six to seven days apart; but, commencing Monday, April 10th, we will examine all cases twice a week, at not greater intervals than four days, nor less than three days.

Whereas, at the start, our cases came to us full of suspicion, nervous and afraid of how they would be treated, it is gratifying to be able to say that now the great majority of them state that they consider the Clinic a benefit to them themselves, and express perfect satisfaction with the manner with which they are treated.

From our records we find that since the start of the registration four of the people registered have left the city.

The following figures will, no doubt, prove interesting:

No. of cases registered	841
No. of examinations made	1487
No. of Syphilitic cases	15
No. of cases combining Syphilis and Gon.	2
No. of cases of Gonorrhea	78
Total No. of cases diseased.....	95
No. of treatments given at Clinic	355
No. of cases cured and discharged	10
No. of cases sent to the Hospital—Syph.....	7

In conclusion, the necessity for the installation of this institution has already been fully demonstrated.

First, from a material point of view, the amount of disease found in this short time, shows the absolute necessity for the effort to curtail the dangers of contagion.

Secondly, from a moral standpoint, accepting, as we must, that the social evil exists, always has and always will, every step taken to make the life less alluring renders it more difficult to obtain recruits for the ranks of this army, and we can contend that if by entering this life they must submit to registration, many will be deterred from stepping over the line of demarcation.

CHEMICAL LABORATORY

A. C. BOTHE, M. D., Chief Chemist.

FRED WEST, First Assistant Chemist.

GEO. AHLERS, Second Assistant Chemist.

During the month of April, 1911, 472 milk samples, 1 biscuit, 1 unknown liquid, 1 dry milk, 1 disinfectant, 1 ginger snap, 1 jam, 2 corn, 2 butter, 1 mineral water and 28 water samples were analyzed. A total of 511 samples.

RECORD OF ARRESTS

Pending at Last Report

OFFICERS
M. TIERNEY and
H. PROWSE.

Arrested	NAME	VIOLATION	COMPLAINANT	JUDGE	DISPOSITION	
					CONTINUANCES	FINAL ACTION
Aug. 24	Nick Hansen	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Aug. 26	Peter Cauba	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Aug. 26	John Buhle	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Aug. 26	Joseph Fassler	Ord. 731	O'Connor	Weller	Pending, appeal to Superior Ct.	
Aug. 26	John Mondott	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Aug. 26	Chas. Ballhaus	Ord. 731	O'Connor	Conlan	Pending, appeal to Superior Ct.	
Aug. 26	Mrs. Cerutti	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Aug. 29	Bernard Cassou	Ord. 731	O'Connor	Conlan	Pending, appeal to Superior Ct.	
Aug. 31	Albert Engel	Ord. 731	O'Connor	Weller	Pending, appeal to Superior Ct.	
Aug. 31	Sam Aftergut	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Oct. 5	Jacob Bergman	Ord. 731	O'Connor	Shortall	Pending, appeal to Superior Ct.	
Feb. 27	Bernard Wolski	Main. a nuisance	Campbell	Deasy		Case dismissed Apr. 6.
Mar. 2	Bernard Diller	Main. a nuisance	Campbell	Deasy		Case dismissed Apr. 6.
Mar. 7	Louis M. Laib	Sec. 373a, P. Code.	Haynes	Deasy	Continued to May 6.	
Mar. 8	H. Lapachet	Ord. 660	O'Connor	Shortall		Found guilty and fined \$300 Apr. 5.
Mar. 10	Edwin A. Green	Ord. 660	Lendrum	Weller		Case dismissed Apr. 5.
Mar. 13	G. Mazzucchi	Ord. 615	Farrell	Deasy	Continued to June 10.	

Arrested During the Month

Apr. 4	Manuel Borges	Ord. 660	O'Connor	Deasy		Case dismissed Apr. 5.
Apr. 17	John L. Barats	Ord. 660	Lendrum	Weller		Case dismissed Apr. 5.
Apr. 19	H. C. Lunt	Ord. 660	O'Connor	Shortall	Continued to May 3.	
Apr. 19	Isaac B. Parsons	Ord. 660	Murphy	Weller		Case dismissed Apr. 22.
Apr. 19	Antonio M. DeBorba	Ord. 660	Lydon	Weller		Case dismissed Apr. 20.
Apr. 26	Bert Davis	Ord. 660	Lydon	Weller		Case dismissed Apr. 27.
Apr. 29	Henry Lauberge	Ord. 660	Lendrum	Weller	Continued to May 4.	

Ordinance Numbers Defined

Ordinance	
373a Penal Code	Maintaining a nuisance.
615	Plumbing ordinance.
660	Providing for the inspection of milk.
731	Dairies (2 cows to the acre).

Summary

Pending at last report	17
Arrested during the month	7
Total	24
Convicted	1
Dismissed	8
Pending—April arrests, 2; previous months, 13	15
Proof total	24

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF MAY, 1911

Five hundred and fifty-five deaths were registered this month, 21 more than in May, 1910, and 20 more than in the same month of 1909. Annual mortality rate in 1910 per 1,000 population, 13.48 (est. pop., 475,000). This month it is 14.01 (est. pop., 475,000). In 1909 it was 13.51 (est. pop., 475,000). The following comparative tables will show the total deaths from all causes during the month of May for the past three years, also those from some of the principal causes.

DEATHS

Table of Deaths, all causes.....	1909	1910	1911
From—	535	534	555
Tuberculosis	65	52	62
Pneumonia	34	32	29
Pneumonia, Broncho	11	18	5
Organic Heart Disease	78	72	74
Cancer (all organs, etc.)	41	31	53
Bright's Disease	24	33	41
Diseases Digestive System	26	42	40
Typhoid Fever	4	5	7
Diphtheria	5	5	2
Scarlet Fever	1	2	3
Whooping Cough	4	7	4
Diseases Early Infancy	22	21	19
Old Age	19	5	8
Deaths from External Causes	52	44	43

BIRTHS

Births registered total 627, against 584 in May, 1910, and 526 in the corresponding month of 1909. The annual birth rate in May, 1909, was 13.20. In 1910 it was 14.74. This month it is 15.84.

This is the heaviest normal registration of births recorded since May, 1905. In May, 1908, the figures for the current month were exceeded by 14 births, but at that time there was a clearing up of old unrecorded cases, thus giving the figures for said month an inflated value.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month, as compared with the corresponding months in 1909-1910.

	1909	1910	1911
Diphtheria	66	43	23
Scarlet Fever	50	50	67
Smallpox	7	2	1
Measles	192	171	280
Whooping Cough	70	61	59
Mumps	59	23	69
Pneumonia	40	59	28
Chickenpox	29	44	68
Tuberculosis	110	122	102
Typhoid Fever	15	*26	†14

*Of these cases 21 were of local origin and 5 not local.

†Of these cases 8 were of local origin and 6 not local.

Diphtheria shows a falling off in the number of cases as compared with the two previous years while scarlet fever is still working upward, though there are six cases less reported this month than in the month of April just closed. Measles shows an increase of 114 cases reported over the preceding month. Whooping cough 1 case less. The figures on mumps took on a decline, 69 cases being reported as against 113 for April. Chicken pox also shows a slight decline as 11 cases less were reported for May than in April. Typhoid fever shows a falling off of 40 per cent in the number of cases as compared to the month of April, 23 cases being reported in April while 14 show for this month. Of this number but 6 are of local origin. One case of smallpox developed during the month, this being a case arriving direct from Kansas City, Missouri.

SCHOOL MEDICAL INSPECTION

A full and detailed report of this division appears on page 16 and attention is especially directed to this phase of Health Department work, which is now almost fully developed. The Board of Supervisors have very generously set aside sufficient funds to enable us to add four nurses to our staff and has likewise made provision for an assistant to the Chief School Medical Inspector. With this additional help every school in San Francisco will be under the supervision of this Department.

DAIRY AND MILK INSPECTION.

The full report of these divisions shows on page 13. Particular attention is now being given to the sanitary condition of outside dairies shipping milk into this city. One shipper who failed to comply with the requirements of this Department in this regard lost one shipment of seventy gallons which was confiscated and emptied into the waters of the bay. Not that the product was found to be impure, but simply as an indication that the Board of Health will insist that dairies and their surroundings and likewise the herd will be so maintained as to render absolute cleanliness possible. This same offender, located near Benicia, California, suffered the loss of five cows which were found to be tubercular after proper inspection by the Veterinarian of this Department.

RED PLAGUE SUPPRESSION WORK.

So much interest has been manifested in this most important work that it is deemed proper at this time to give the subject the space which it necessarily requires to show the full extent of what is being accomplished in this direction, therefore attention is called to the following extracts from the report of the chief clerk in charge of the Municipal Clinic.

I have the honor to submit the following report of the operation of the Municipal Clinic for the period ending April 30th, 1911.

In answer to the criticism that has been made as to the utility of the Clinic, I beg to quote in full the following letter from Major R. M. Thornberg, Chief of the Surgical Service, Presidio, San Francisco.

Considering the fact that the Clinic was opened in the middle of March, and that the houses immediately supervised by it were the ones principally frequented by enlisted men of the U. S. army, the good effects of your supervision are shown by the remarkable decrease in venereal disease among that body of men:

United States Army General Hospital.

San Francisco, Cal., May 13, 1911.

I have the honor to inform you that admissions to this hospital, for venereal diseases, during the past three month have been as follows:

1911		
February	11	per 1000
March	8.4	per 1000
April	3.1	per 1000

Syphilis is not included because no case of primary syphilis was admitted in that time. The secondary and tertiary cases were probably incurred prior to February.

If you desire to include syphilis, even if not primary, the result is:

February	13	per 1000
March	10	per 1000
April	4	per 1000

This shows decided improvement and at about the same ratio as when syphilis is not included.

The admission rate is computed from the official "strength of command" at Presidio of San Francisco.

Very respectfully,

R. M. THORNBERG (Signed)

Major, Medical Corps, Chief of Surgical Service.

The foregoing statement authenticated as it is by the signature of a United States Army Officer possesses something more than a passing value, and is the best evidence possible to obtain to show that some real good is being accomplished. Owing to the fact that this work has now passed the experimental stage I submit the following tabulated statement with the information that it must be distinctly borne in mind that this Clinic started with a voluntary subscription of \$500 donated by a public spirited citizen and has now rendered itself self supporting.

	Last Report April 10	Report April 11 to April 30	Total to April 30
Number of cases registered.....	841	175	1016
Number of examinations.....	1487	1929	3416

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF JUNE, 1911

Five hundred and fifty-three deaths were registered this month, 61 more than in June, 1910, and 27 more than in the same month of 1909. Annual mortality rate in 1910 per 1,000 population, 11.16 (Estimated population, 475,000). This month it is 12.69 (Estimated population, 475,000). In 1909 it was 12.24 (Estimated population, 475,000). The following comparative tables will show the total deaths from all causes during the month of June for the past three years, and also from some of the principal causes.

DEATHS

Table of Deaths, all causes	1909	1910	1911
From—	476	442	503
Tuberculosis	44	48	48
Pneumonia	27	15	31
Pneumonia, Broncho	9	18	15
Organic Heart Disease	65	73	65
Cancer (all organs, etc.)	34	35	39
Bright's Disease	32	24	24
Diseases Digestive System	45	47	50
Typhoid Fever	6	10	6
Diphtheria	4	6	2
Scarlet Fever	5	1	1
Whooping Cough	6	3	4
Diseases Early Infancy	19	11	15
Old Age.....	10	12	12
Deaths from External Causes.....	62	37	43

BIRTHS

Births registered total 602 against 536 in June, 1910, and 589 in the corresponding month of 1909. The annual birth rate in June, 1909, was 14.80. In 1910 it was 13.53. This month it is 15.20. This is a very satisfactory showing, comparatively speaking, and indicates that there is a tendency to recognize the importance of complete birth registration. Comparative tables in times past has shown in many instances the death rate exceeding the birth rate, but recently there appears a change for the better.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month, as compared with the corresponding months in 1909-1910:

	1909	1910	1911
Diphtheria	38	33	12
Scarlet Fever	42	33	67
Smallpox	2	1	1
Measles	108	106	171
Whooping Cough	23	38	19
Mumps	25	12	13
Pneumonia	37	32	52
Chickenpox	29	7	23
Tuberculosis	88	107	72
Typhoid Fever	28	*44	†16

*Of these cases 29 were of local origin and 15 not local.

†Of these cases 8 were of local origin and 8 not local.

Diphtheria shows a marked decline in the number of cases as compared with the two years previous, while the figures show a decrease in the number of cases by fifty per cent as compared with the month of May just closed. Scarlet fever shows an increase over the two previous years and exactly the same number of cases were reported as during the month of May. Measles show a reduction of 109 cases as compared to May. Whooping cough shows a lower rate than for the two previous years and forty cases less than in May. Mumps show 56 cases less than in May; chickenpox, 45 cases less; typhoid fever has fallen off fifty per cent as compared to June, 1910, and 12 cases less than in June, 1909. There were two cases more reported this month than in May, though of the 16 cases 8 were but of local origin.

SCHOOL MEDICAL INSPECTION

Owing to the midsummer vacation, but little work was accomplished in this division during this month. The fall term will not open until the 24th day of July. In connection with this work it must be stated that the Health Inspectresses attached to this division will be directed to be in constant attendance at the Convention of the National Educational Association which will open here in the early part of July.

CITY CASES IN PRIVATE HOSPITALS

For the past three and one-half years this Department has been sending City cases to private hospitals, owing to our inability to handle these cases in the temporary quarters of the City and County Hospital located at Ingleside. The expense of this arrangement has approximated four thousand dollars per month during this period. The completion of the Infirmary Building on the Relief Home Tract has rendered it possible for us to convert said building into a hospital for the reception of cases usually sent to the private institutions. During the month just closed the number of cases in the private hospitals have been reduced by one-half. The average number of cases in these hospitals being about 125 cases, and the record at the end of June shows that but 62 cases remain, and these are being cleared into the Infirmary Building as rapidly as circumstances will permit.

This class of cases does not include the tuberculars, who are to be provided with accommodations in the shape of temporary "Lean-to" buildings to be erected on the site of the San Francisco Hospital, Twenty-second and Potrero Avenue. Contagious cases are to be handled in the Isolation Hospital Division, the buildings in this group to be temporarily converted into contagious wards.

RED PLAGUE SUPPRESSION WORK.

Following up the report contained in the May Bulletin on this division, there is submitted herewith a statement of the Superintendent of the Clinic, which will no doubt prove of interest.

"I have the honor to submit the following report for the Municipal Clinic for the period ending May 21st, 1911:

	April.	May.	Total.
Cases registered	1,016	103	1,119
Examinations	3,416	3,452	6,868
Syphilis	17	2	19
Syphilis and G. C.	2		2
Gonorrhea	152	12	164
Total diseased cases	171	14	185
Treatments	1,015	410	1,425
Cured	18	22	40
Sent to hospital	9	2	11
Left the city	121	81	202
Quit and furnished work	12	10	22

"It is now the vacation period, and a number of these persons taking advantage of our clinic are temporarily out of town, hence, for the coming two months, we may look for a decrease in attendance. From actual experience it would appear that there are about 600 persons actually living in recognized houses all the time, although the individuals change and are constantly moving back and forth between this city and other towns. A movement is on foot to secure the attendance of certain members of this class who are not attending the clinic, and good results are expected to be obtained. The following financial statement may prove of interest:

RECEIPTS

Cash on hand May 31st		\$ 430.41
New cases	\$ 49.50	
Regular examinations	1,676.50	1,726.00
		<u>\$2,156.41</u>

DISBURSEMENTS

General expense	1,531.13
Balance cash on hand	<u>\$ 625.28</u>

NOTE.—Because of the midsummer vacation, necessarily work done by this Department in the schools does not appear. Vaccinations appear but are carried forward from the month of May. During the vacation home visits have been made by the nurse, to the end of accomplishing operative procedures, this appearing under head of visits to homes.

During the session of the National Education Association (July 8th to 14th) nurses from this Department were on duty. The July Bulletin will contain a report of the work done.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF JULY, 1911

Four hundred and twenty-seven deaths were registered this month, 106 less than in July, 1910, and 35 less than in the same month of 1909. Annual mortality rate in 1910 per 1,000 population was 13.46, this month it is 10.77. In 1909 it was 11.66. The following comparative tables will show the total deaths from all causes during the month of July for the past three years, and also from some of the principal causes:

DEATH

	1909	1910	1911
Table of deaths, all causes	462	533	427
From—			
Tuberculosis	44	63	44
Pneumonia	17	23	19
Pneumonia, broncho	5	15	10
Organic Heart Disease	63	87	55
Cancer (all organs, etc.)	41	53	44
Brights Disease	19	35	24
Diseases digestive system	44	47	45
Typhoid Fever	5	4	1
Diphtheria	3	1	1
Scarlet Fever	1	0	1
Whooping Cough	5	4	4
Diseases early infancy	29	20	14
Old Age	11	6	5
Deaths from external causes	47	48	41

BIRTHS

Births registered, total 652, against 523 in July, 1910, and 589 in the corresponding month of 1909. The annual birth rate in 1910 was 13.20, in 1909 it was 14.88. This month it is 16.46.

As will be seen from the foregoing figures the birth rate shows a very satisfactory increase over the preceding two years, and 225 more births were registered than there were deaths recorded. The figures for the past six months show an upward trend insofar as the registration of births are concerned, and this is as it should be, as in all States where normal registrations are recorded the birth rate is usually heavier than the death rate.

CONTAGIOUS DISEASES

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1909-1910:

	1909	1910	1911
Diphtheria	20	27	14
Scarlet Fever	23	17	28
Smallpox	0	1	1
Measles	14	37	46
Whooping Cough	27	59	27
Mumps	3	4	9
Pneumonia	30	42	27
Chickenpox	4	6	14
Tuberculosis	108	115	61
Typhoid Fever	35	*26	†13

*Of these cases 15 were of local origin and 11 not local.

†Of these cases 8 were of local origin and 5 not local.

Diphtheria shows a falling off in the number of cases when compared with the two years previous, while the number of cases reported in this month exceed by two those reported in the month of June just closed.

Scarlet Fever shows an increase over the two previous years but indicates a marked decline as compared to the month of June, when 67 cases were reported, the difference being a 55 per cent decline for this month.

Measles show a reduction of 122 cases as compared to June, and Whooping Cough shows an increase of about 50 per cent in the number of cases over the month of June.

Mumps show four cases less than in June; Chickenpox 25 cases less; Typhoid Fever 3 cases less than in the month of June just closed, 13 less than in July, 1910, and 22 less than July, 1909. Of the 13 cases reported during the present month but 8 were of local origin.

SCHOOL MEDICAL INSPECTION.

The Fall term opened on the 24th day of July, giving but about five school days to report upon during this month, consequently the report of this Division, which appears on page 16, will not show a great deal of work accomplished. However, the school term now being in full swing, the August report of this Department will show to better advantage.

CITY CASES IN PRIVATE HOSPITALS.

As indicated in my June report, the closing of the month of July marked the passing of city cases in private hospitals. On the 31st day of July not one case remained in these institutions, all of the city cases now being cared for in the Infirmary Building on the Relief Home Tract. The report of the City and County Hospital, which appears on page 11

of this Bulletin, will indicate the number of cases that are yet remaining at Ingleside, which is about to be cleaned out. The number of tuberculosis cases at Ingleside will be removed to the new "lean-to" quarters which are now in course of erection on the grounds of the S. F. Hospital at 22nd and Potrero Avenue.

At the present time there are at Ingleside 102 inmates of what was formerly known as Building No. 3 of the Relief Home, which was destroyed by fire some months ago, and steps are now about to be taken for accommodating these inmates in an addition to be provided for in the Relief Home group of buildings, and when this is done it will see the passing of Ingleside as a City and County Hospital location, where it has stood since the destruction by fire of the old City and County Hospital in the early part of 1908.

DIVISION OF FOOD, DAIRY AND MILK INSPECTION.

A full report of the work performed in these various divisions will appear on page 13 of this Bulletin.

As will be seen in reference to the figures, very good work is being accomplished by the inspectors in these various branches.

DIVISION OF MEAT INSPECTION.

The report of this Bureau shows on page 14, and a reference to the tables of condemnation and seizures readily demonstrates the fact that this inspection is vitally necessary.

During this month the carcasses of 19 hogs, which were being shipped from Point Arena into Oakland, via San Francisco, were intercepted by the inspectors of this Department for the reason that no inspection stamp or identification tag appeared thereon. These hogs were subsequently condemned, coal oiled and sent to the Reduction Works, as the fact that they were being shipped through San Francisco was a violation of our meat ordinance.

RED PLAGUE SUPPRESSION WORK.

The following report submitted by the Superintendent of the Municipal Clinic is herewith submitted, as no doubt same will prove to be of considerable interest:

	May Report	June Report	Total
Cases registered	1119	77	1196
Examinations	6868	2397	9265
Syphilis	19	6	25
Syphilis and Gonorrhea	2	0	2
Total diseased cases	185	42	227
Treatments	1425	225	1650
Cured	40	89	129
Sent to Hospital	11	3	14
Left the City	202	76	278
Quit and furnished work	22	..	22

Attendance at the Clinic is still affected by the vacation period, but it is gratifying to be able to say that there are very few delinquents among the persons actually known to be engaged in this traffic. The value of the Clinic has been recognized by the Federal authorities and one conviction under the white slave law was obtained by the aid of our records, and there is now pending a case in the Federal Courts where the male was arrested by our officers.

The financial statement of the Clinic is attached herewith:

June 30, 1911.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D. FOR THE MONTH OF AUGUST, 1911

Four hundred and sixty-nine deaths were registered this month, 30 less than in August, 1910, and 19 more than in the same month of 1909. It should be noted, however, that during this month 38 non-residents died in the city as against 15 in August, 1909. This will have some bearing on the explanation of the apparent increase. Annual mortality rate in 1910 per 1000 population was 12.60, this month it is 11.84. In 1909 it was 10.70. The following comparative tables will show the total deaths from all causes during the month of August for the past three years, and also from some of the principal causes:

DEATHS.					
	1909	1910	1911		
Table of deaths, all causes.....	450	499	469	From—	
From—				Diseases digestive system....	38
Tuberculosis.....	31	61	47	Typhoid fever.....	8
Pneumonia.....	25	31	22	Diphtheria.....	1
Pneumonia, Broncho.....	6	8	8	Scarlet fever.....	1
Organic heart disease.....	56	74	62	Whooping cough.....	4
Cancer (all organs, etc.).....	45	38	45	Diseases early infancy.....	16
Brights disease.....	32	22	34	Old age.....	13
				Deaths from external causes..	50
					38
					35

BIRTHS.

Births registered, total 601, against 554 in August, 1910, and 540 in the corresponding month of 1909. The annual birth rate in 1910 was 13.99, in 1909 it was 13.56. This month it is 15.18. One hundred thirty-two more births were registered than there were deaths recorded. The registration for the past four months has kept up its average remarkably well, and we are without doubt improving in the matter of accurate reporting of births.

CONTAGIOUS DISEASES.

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1909-1910:

	1909	1910	1911		1909	1910	1911
Diphtheria.....	27	32	16	Mumps.....	7	3	17
Scarlet fever.....	22	27	13	Pneumonia.....	32	52	22
Smallpox.....	0	1	2	Chickenpox.....	2	18	28
Measles.....	11	34	58	Tuberculosis.....	90	114	77
Whooping cough.....	26	44	16	Typhoid fever.....	38	*35	†14

*Of these 7 were of local origin and 28 not local.

†Of these cases 7 were of local origin and 7 not local.

Diphtheria shows a falling off in the number of cases by 50% when compared with the two years previous, while the number of cases reported in this month exceed by two those reported in the month of July just closed.

Scarlet fever shows a decrease of 50% over the two previous years, and a decline of 53% in the number of cases as compared to the month of July.

Measles show an increase of 12 cases as compared to July, and whooping cough shows a decrease of about 40% in the number of cases over the preceding month.

Mumps show eight cases more than in July; chickenpox an increase of 28 cases. Typhoid fever the same number as reported in the month of July, 21 less than in August, 1910, and 24 less than in August, 1909. Of the 14 cases reported during the present month, but seven were of local origin.

In connection with the foregoing report it will no doubt prove of interest to state that while the cases of measles, mumps and chickenpox show an increase over the figures for the corresponding month in the two previous years, the Health Inspectresses have reported exclusions from school during the month as follows:

Measles, 34 cases; mumps, 28 cases (half of these being contacts); chickenpox, 28 cases. In all probability had it not been for our system of school medical inspection many of these cases would not have been brought to the attention of this Department, as the fact that these children were permitted to attend school is evidence that no physician was in attendance, or if so, they did not realize the importance of reporting their cases. This will, in a measure, account for the apparent increase in the number of cases of these diseases as shown in the foregoing table.

SCHOOL MEDICAL INSPECTION.

The report of this division appearing on page 16 of this Bulletin, will be found to be replete with interest, the full corps in this Bureau, under the direction of the Chief Medical Inspector and one Assistant, performing work of much importance. The resumption of school work following the termination of the summer vacation naturally brings out more activity in this branch of inspection, and after September 1st four additional Health Inspectresses will be added to the force, also one Assistant Medical Inspector. This will place at the command of the Department a corps sufficient to cover all of the schools in the city with the exception of five, and these are what is known as "Grammar" schools, accommodating advanced pupils, who necessarily do not need the close inspection required for pupils in the primary grades.

CITY AND COUNTY HOSPITAL.

Following up my July report in the mention of disposition of city cases in private hospitals, I am pleased to state that during this month final arrangements have been perfected whereby the old temporary quarters of the City and County Hospital at Ingleside have been entirely abandoned, all acute and chronic cases now being housed in a modern hospital fitted up in the Infirmary Building on the Relief Home Tract, where all cases of this character will be cared for until such time as the new San Francisco Hospital, now in course of construction on 22nd and Potrero Avenue, shall have been completed.

The tuberculosis cases, number approximately 150, are comfortably housed in a group of frame buildings erected on a portion of the site of the San Francisco Hospital, and at the present time it can safely be said that the tubercular patients are being better cared for than ever before. This is rendered possible owing to the fact that they are now in a separate

institution where the method of segregation of incipient, advanced and hopeless cases may be effected to good advantage. All contagious cases are sent to the Isolation Hospital, which has been specially equipped for the reception of patients of this character, and while the City and County Hospital, as it is now constituted, consists of three separate and individual units, affairs are so arranged that it is possible to give all our patients the best of care without any appreciable increase in expense.

DIVISION OF FOOD, DAIRY AND MARKET INSPECTION.

The detailed reports of the work performed by these divisions appear on page 13 of this Bulletin. The force of the food Bureau has been increased during the present month by the addition of two inspectors, now making four in all, who are covering this phase of the work. The result of this addition is made manifest when the figures as shown in the total inspections for the month of July are compared with those of this month, July showing a total of 712 inspections and August showing 842, an increase of 130. There were 71 inspections of fruit stores made in July and 207 in August; 14 grocery stores were inspected last month and 181 were covered this month; 38 hotels and restaurants were visited during July and 145 were investigated during the month of August. These figures will give a fair idea of the wisdom of strengthening this branch of our work.

Dairy and milk inspection has been given the strict attention that its importance deserves; 82 dairies within the city limits were inspected during the month, and 46 outside dairies were covered; 117 dairy depots were also covered, the increase over the figures given in July being accounted for by the fact that the summer vacations are now at an end and the full force of inspectors are again in the field. A total of 245 inspections were made during the month of August, as compared with 130 during the month of July.

In the milk inspection division, 143 samples of milk were taken from various sources, same being submitted to the Chemist for analysis.

The report of the Chemist, which appears on pages 17 and 18 of this Bulletin, will indicate the results obtained. Thirty-five arrests were made during the month, and combined with four cases pending from July, fifteen convictions were obtained. 22 offenders were dismissed with reprimand (it being their first offense), and two cases are still pending. Fines to the extent of \$650 were imposed upon offenders during the month for violation of the Milk Ordinance, 95% of these violators having been arrested for watering their product.

ARRESTS MADE.

Particular attention is directed to the report of arrests made during the month, which appears on page 19. This report gives in minute detail the work in which the Department is engaged in the direction of enforcing Health Ordinances. A total of 37 arrests were made and fines amounting to \$880 were imposed upon offenders, this including the \$650 in fines as indicated in the report under the Division of Milk Inspection. There are 11 cases pending on appeal to the Superior Court where offenders have been arrested for violating the provisions of Ordinance No. 731, known as the "Two cows to the acre" Ordinance.

RED PLAGUE SUPPRESSION WORK.

The work of the Municipal Clinic is progressing favorably, as the following table submitted by the Superintendent thereof will show:

	Total to July 31st	August	Total to Aug. 31st
Cases registered.....	1,280	1,371	1,371
Examinations.....	11,790	3,084	14,874
Syphilis.....	33	2	35
Gonorrhea and syphilis.....	2	0	2
Gonorrhea.....	268	36	304
Total diseased cases.....	303	38	341
Treatments.....	1,970	425	2,395
Cured.....	171	34	205
Sent to Hospital.....	24	5	29
Left the city.....	290	60	350
Quit and furnished work.....	22	5	27

COMPARATIVE STATEMENT

	March	April	May	June	July	Aug.
Number of individuals examined.....	647	905	819	747	740	744
Number of examinations.....	1,487	1,929	3,452	2,397	2,525	3,084
Cases of syphilis.....	17	2	2	6	8	2
Cases of gonorrhea.....	78	74	12	36	68	36
Total diseased cases.....	95	76	14	42	76	38
Average examination per individual.....	2	2	4	3	3	4
Proportion diseased cases per thousand						
Syphilis.....	27	2	2	8	10	2½
Gonorrhea.....	120	81	15	48	92	48
Total diseased.....	147	83	17	56	102	50½
Number of free treatments given diseased cases.....	355	660	410	225	320	425

The foregoing figures show the total amount of work performed in the Clinic since its opening in the middle of March of the present year. In view of the fact that predictions had been more or less freely made by the opponents of this movement that the same would not prove to be a success, these figures should prove to be of more than ordinary interest. The report shows that 27 individuals have voluntarily abandoned a life of shame and have turned to respectable occupations. This feature in itself, if no other object were accomplished, should commend this very important work to every right thinking citizen, and is an evidence of the fact that the establishment of this feature of Health Department work has been at least of some slight benefit to the members of the human family.

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF SEPTEMBER, 1911

Five hundred and nineteen deaths were registered this month, 67 more than in September, 1910, and 95 more than in the same month of 1909. Annual mortality rate in 1910, per 1000 population, was 11.41, this month it is 13.08. In 1909 it was 10.70. The following comparative tables will show the total deaths from all causes during the month of September for the past three years, and also from some of the principal causes:

DEATHS.

	1909	1910	1911		1909	1910	1911
Table of deaths, all causes.....	424	452	519	From—			
From—				Diseases digestive system.....	40	48	68
Tuberculosis.....	42	40	53	Typhoid fever.....	5	11	11
Pneumonia.....	16	27	26	Diphtheria.....	1	6	1
Pneumonia, Broncho.....	8	8	13	Scarlet fever.....	4	0	0
Organic heart disease.....	63	58	51	Whooping cough.....	2	1	2
Cancer (all organs, etc.).....	34	37	33	Diseases early infancy.....	18	6	24
Brights disease.....	22	12	38	Old age.....	11	4	6
				Deaths from external causes..	27	50	55

BIRTHS.

Births registered, total 546, against 547 in September, 1910, and 587 in the corresponding month of 1909. The annual birth rate in 1910 was 13.81, in 1909 it was 14.83. This month it is 13.78.

CONTAGIOUS DISEASES.

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1909-1910:

	1909	1910	1911		1909	1910	1911
Diphtheria.....	30	30	13	Mumps.....	18	2	22
Scarlet fever.....	47	26	14	Pneumonia.....	26	43	30
Smallpox.....	0	0	3	Chickenpox.....	11	39	54
Measles.....	15	69	150	Tuberculosis.....	112	93	75
Whooping cough.....	26	26	33	Typhoid fever.....	26	*35	†48

*Of these 17 were of local origin and 18 not local.

†Of these cases 28 were of local origin and 20 not local.

Diphtheria shows a decrease of 56 per cent in the number of cases as compared with the corresponding month in the two years previous, while this month shows three cases less than the month of August just closed. Scarlet fever shows a falling off by over 50 per cent in the number of cases as reported in the two previous years and one case more was reported this month than in the month of August.

Measles shows a remarkable increase over 1909-10, as 66 more cases were reported during the month than in the corresponding period for the years 1909-10 combined, and an increase of 92 cases over the month of August.

Mumps showed 20 cases more than in August; chickenpox, 15 cases more.

Typhoid fever shows 13 cases more than in the same month of 1910, 12 more than in 1909, and 25 cases more than in the month of August just closed. The number of typhoid fever cases reported during this month as shown in the above table totaled 48, and of these 28 were of local origin and 20 not local. It is strongly suspected that there is a foci of infection in the Ocean View District, close to the county line, and an investigation is now on foot in an effort to trace the origin of this epidemic. The October report will deal with the details of the result of this inspection.

SCHOOL MEDICAL INSPECTION.

The work of this Division shows in full on page 16 of this Bulletin. As stated in my August report, four additional Health Inspectresses have been added to our force, also one Assistant Medical Inspector. Seventy-three out of 85 schools now operating in the city are thus brought under inspection and the work accomplished can best be appreciated by consulting the tabulated report of this Division.

DIVISION OF FOOD INSPECTION.

Five Inspectors are now detailed to duty in this Division, with the consequent increase in the efficiency of our work, a total of 1491 inspections being covered during the month, as against 842 for the month of August. We are now enabled to give very close attention to what is known as the "Commission House District"; 543 inspections being covered under this heading as compared to 186 in the preceding month. Where 145 hotel and restaurant inspections were made in August, 407 were made during this month, and a comparison of all the totals under the different captions of "Places visited" shows a marked increase. Where 13 samples were taken for chemical analysis in the previous month, 106 were gathered during this month. These few references will serve to indicate that this Division is now receiving the attention that its importance deserves.

Citations were issued during the month against a number of dealers for violation of the "Pure Food Law," and the disposition of these cases will be treated of in my October report.

DIVISION OF DAIRY AND MILK INSPECTION.

With the addition of three new food inspectors, it is now made possible to give more attention to the seizure of milk samples for chemical analysis, 283 of these being secured during the month as against 143 in August. Fifty-seven samples were taken from delivery wagons, and 225 from railroad depots and wharves. Reference to the report of the Chemist, which appears on page 17, will show how these samples worked out. The dairy inspectors visited 52 outside dairies and covered 174 dairy depots within the city limits; 9625 cows were inspected, 11 were placed under quarantine and two were condemned and killed. Sixty-six milk cans were condemned as unfit for further use, and 16 samples of water were taken from various dairies for chemical and bacteriological analysis.

DIVISION OF MARKET AND INDUSTRIAL INSPECTION.

The reports of these Divisions appear respectively on pages 14 and 15 of this Bulletin, and should be consulted in order to secure an idea as to the character of work being performed. Particularly in the Division of Industrial Inspection it will be shown that 65 nickelodeons were inspected during the month, this being in conformity with a new section of the building law requiring adequate ventilation in these places of amusement. Seventy-two of these theatres are now in operation in the city and are patronized by thousands of our citizens, mainly children, and the enforcement of this ordinance has no doubt tended to create a condition that minimizes to a great extent the possibility of dissemination of contagious diseases. An arrangement has been perfected between this Department and the Police Commission whereby no new license to operate such a place can be granted, or an old license renewed until this Department has certified to the fact that the place in question has complied with the requirements of the Cubic Air Law.

RED PLAGUE SUPPRESSION WORK.

Following up my previous reports on the Municipal Clinic, I have to state that the attendance thereat maintains a satisfactory standard. Owing to the numerous holidays occurring during the past month the income shows a slight decrease from the month of August. In an effort to enforce registration one arrest was made during the month, and upon examination the individual was found to be badly infected. The case was continued in the Police Court for a period of thirty days, the patient being remanded to the custody of this Department for treatment in the City and County Hospital. A detailed report of the operations for the month are here given, these figures having been submitted by the Superintendent of the Clinic:

	Total to August 31st	September	Total to Sept. 30th
Cases registered.....	1,371	89	1,460
Examinations.....	14,874	2,475	17,349

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF OCTOBER, 1911

Five hundred and forty-one deaths were registered this month, 31 less than in October, 1910, and 23 more than in October, 1909. Annual mortality rate in 1910 per one thousand population was 14.44, this month it was 13.65. In 1909 it was 13.08. The following comparative tables will show the total deaths from all causes during the month of October for the past three years and also from some of the principal causes:

DEATHS.

	1909	1910	1911		1909	1910	1911
Table of deaths, all causes.....	518	572	541	From—			
From—				Diseases digestive system.....	54	84	77
Tuberculosis.....	65	67	50	Typhoid fever.....	3	6	8
Pneumonia.....	34	25	28	Diphtheria.....	0	3	0
Pneumonia, Broncho.....	18	14	19	Scarlet fever.....	1	1	0
Organic heart disease.....	74	80	71	Whooping cough.....	6	1	2
Cancer (all organs, etc.).....	40	43	32	Diseases early infancy.....	17	19	22
Bright's disease.....	19	31	25	Old age.....	8	3	14
				Deaths from external causes..	57	42	52

BIRTHS.

Births registered, total 590, against 583 in October, 1910, and 591 in the corresponding month of 1909. The annual birth rate in 1910 was 14.72, in 1909 it was 14.92. This month it is 14.90.

CONTAGIOUS DISEASES.

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1909-1910:

	1909	1910	1911		1909	1910	1911
Diphtheria.....	31	22	16	Mumps.....	6	28	16
Scarlet fever.....	33	25	16	Pneumonia.....	50	46	34
Smallpox.....	0	0	0	Chickenpox.....	25	52	60
Measles.....	18	36	208	Tuberculosis.....	132	131	125
Whooping cough.....	36	15	36	Typhoid fever.....	*42	†20	‡74

*Of these 23 were of local origin and 19 not local.

†Local origin 12, not local 8.

‡Local origin 54, not local 20.

Diphtheria shows a decrease of 27% in the number of cases as compared with the corresponding month in 1910, and 50% as compared to October, 1909, while this month shows three cases more than in the month of September just closed. Scarlet fever shows a falling off by more than 36% in the number of cases as reported in the month of October, 1910, and 50% as compared to 1909, while two cases more reported than in the preceding month. Measles shows a decided increase as 100 more cases were reported during the month than in the corresponding period for the year 1909-10 combined, and an increase of 58 cases over the month of September. As I have stated in previous reports, this does not indicate an extraordinary increase in the number of cases of this disease. The comparison will show better than any other line of evidence that the work of School Medical Inspection is bearing good fruit, as the majority of the cases reported are found by the Health Inspectresses attached to this division. The report of the Division of School Medical Inspection, which appears on page 16, shows that there were 91 pupils excluded during the month who were found to be suffering with measles, and I am of the opinion, judging from past experience, that but a very small proportion of these cases would have come to the notice of this Department had it not been for this inspection. Mumps shows six cases less than in September, chicken pox six cases more. Typhoid fever shows six cases more than in the same month of 1910, and 32 more than in 1909, while 26 cases more were reported than in the month of September just closed. The number of cases of this disease as reported during the month, total 74, and of this 54 were of local origin and 20 not local. In my September report I stated that I was of the opinion that a foci of infection existed somewhere in the Ocean View District and a searching investigation was promptly started in an effort to discover the origin of the numerous cases coming from this district. The result of this investigation can best be learned from the following copy of a report submitted by the Health Officer relative to this affair:

"In reference to typhoid fever in the southern part of the Excelsior Homestead District, permit me to inform you that the presence of typhoid fever in this district did not become alarming until Monday, October 2nd, on which date the Health Officer made a careful examination of said district and located the source of infection in Hansen's dairy on Amazon Avenue. Upon investigating this dairy I found that one of the milkers was infected with an ambulatory case of typhoid fever, and that he was infecting the milk from the cows which he was employed to milk. On the confirmation of my diagnosis of typhoid fever in this individual he was immediately removed to the County Hospital. All milk utensils, tanks, buckets, etc., were thoroughly boiled, and the udders of the cows were properly washed and sterilized under instructions from the dairy inspector of this Department. The water in the well on these premises was tested for typhoid fever and found negative. The inspectors are now carefully going over the south portion of Excelsior Homestead tract and notifying the property owners to clean up back yards and eliminate the flies which might transfer the disease from one individual to another.

"The doctors in charge of these cases have been notified that they may obtain prophylactic typhoid vaccine free of charge from this Department.

"There has been one case developed since the second and there may be a few more, but since the source of the infection has been removed the epidemic may be considered to be under control."

The records show that a total of 34 typhoid fever cases originated directly from this one ambulatory case, all of these occurring between the dates of September 5th and October 19th. Of these 34 cases, 24 are known to have occurred in persons who were patrons of Hansen's dairy, using milk delivered directly from the ranch; 10 cases were those of actual contacts, or of those using milk purchased from various groceries, delicatessens, etc., who received their milk supply from the same dairy. A re-inspection of the dairy premises in question shows that the premises have been thoroughly cleaned, latrines moved to remote locations and all requirements of this department have been carried out to good effect.

SCHOOL MEDICAL INSPECTION.

A full report of this division will be found on page 16 of this Bulletin. Seventy-four schools are now under inspection and splendid work is being done in this very important branch of our work.

DIVISION OF DAIRY AND MILK INSPECTION.

The work of this Bureau is shown on page 13 of this Bulletin and indicates that very good work by our Inspectors is being done, 448 samples of milk being taken for chemical analysis, as against 283 in the month of September. Two hundred and seventy-one of these were taken from milk depots and dairies, 92 from railroad depots and wharves, and 82 from milk wagons, and three from miscellaneous sources. The report of the Chemist appearing on pages 17 and 18 will show the result of analyses. Seventy-three dairies in outside counties were visited, 30 in this county were covered, and 67 dairy depots were inspected.

DIVISION OF MARKET, INDUSTRIAL AND PLUMBING INSPECTION.

The reports of these divisions show respectively on pages 14 and 15 of this Bulletin, and should be consulted in order to get a fair idea of the work that is being performed in these various branches. Under the head of "Condemnations and Seizures" in the Division of Market Inspection, it is shown that 11,200 pounds of fish were confiscated, 1750 pounds of dressed beef, 121 calves, 91 sheep, 18 lambs, and 56 hogs were also condemned, coal-oiled and shipped to the Sanitary Reduction Works; 1227 chickens met with the same fate.

RED PLAGUE SUPPRESSION WORK.

The following extracts from the report of the Superintendent of the Municipal Clinic, covering the month of October, will convey a fair idea as to the status of this work:

"The attendance of the people for whom the Clinic was instituted is daily becoming more satisfactory. The increased attendance can be attributed to several causes:

"1. The older cases have come to appreciate the benefit of the Clinic to them and attend regularly.

"2. Several cases tried before the Police Judges have been decided favorably to the Clinic and this knowledge of the action of the Courts has caused all the cases to observe greater punctuality in so far as regular examinations are concerned.

"3. The Police Department has renewed very stringent orders to the keepers of the various houses that they must rigidly observe the rules of the Clinic. During the month eight arrests were made in order to compel the observance of the Clinic rules; the arrest of four males on charges of 'White Slavery' were also made as the direct result of the work of the Clinic. The following detailed statement will best indicate the actual work accomplished in this division."

REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

FOR THE MONTH OF NOVEMBER, 1911

Five hundred and ninety-four deaths were registered this month, 72 more than in November, 1910, and 61 more than in November, 1909. Annual mortality rate in 1910 per one thousand population was 13.17, this month it was 15. In 1909 it was 13.44. The following comparative tables will show the total deaths from all causes during the month of November for the past three years and also from some of the principal causes:

DEATHS.

	1909	1910	1911		1909	1910	1911
Table of deaths, all causes.....	533	522	594	From—			
From—				Diseases digestive system.....	45	62	61
Tuberculosis.....	59	59	48	Typhoid fever.....	7	6	10
Pneumonia.....	39	26	35	Diphtheria.....	4	2	2
Pneumonia, Broncho.....	12	11	16	Scarlet fever.....	0	1	0
Organic heart disease.....	68	72	78	Whooping cough.....	2	1	0
Cancer (all organs, etc.).....	39	46	48	Diseases early infancy.....	16	14	22
Brights disease.....	34	33	31	Old age.....	13	8	11
				Deaths from external causes..	56	42	55

BIRTHS.

Births registered, total 513, against 570 in November, 1910, and 567 in the corresponding month of 1909. The annual birth rate in 1910 was 14.40, in 1909 it was 14.28. This month it is 12.96.

CONTAGIOUS DISEASES.

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1909-1910:

	1909	1910	1911		1909	1910	1911
Diphtheria.....	37	28	24	Mumps.....	10	89	22
Scarlet fever.....	50	40	22	Pneumonia.....	56	57	34
Smallpox.....	4	..	1	Chickenpox.....	55	50	77
Measles.....	42	47	245	Tuberculosis.....	104	101	111
Whooping cough.....	37	17	47	Typhoid fever.....	*28	†25	‡37

*Of these 22 were of local origin and 6 not local.

†Local origin 12, not local 13.

‡Local origin 23, not local 14.

Diphtheria shows a decrease of 4 cases as compared with the corresponding month in 1910, and 13 less as compared to November, 1909, while this month shows 2 cases less than in the month of October just closed. Scarlet fever shows a falling off by more than 45% in the number of cases as reported in the month of November, 1910, and 56% as compared to 1909, while 3 cases less were reported than in the preceding month. Measles show an increase over 1909-1910 combined of 156 cases, and 37 cases more than in the month of October just closed. Mumps shows 6 cases more than in October, chicken pox 17 cases more. Typhoid fever shows 12 cases more than in the same month of 1910 and 9 more than in 1909, while as compared to October just closed it shows a decrease of exactly 50%. The number of cases of this disease as reported during the month, total 37, and of these 23 were of local origin and 14 not local.

In connection with this disease a somewhat perplexing condition has been presented owing to the occurrence of cases on the steamer "Acme," plying between San Francisco and Eureka, Cal., and engaged in the lumber and merchandise trade. Eighteen cases of typhoid have developed on this vessel within the past eighteen months. Repeated inspections of the steamer, bacteriological tests of the water supply, foodstuffs, etc., have absolutely failed to reveal anything that would indicate a source of origin. One of the members of the crew of the vessel who has been attached thereto for a period of over three years has voluntarily permitted himself to become an inmate of the City and County Hospital in order to give us an opportunity to examine his blood, feces, etc., for traces of the bacillus, it having been suggested that perhaps an ambulatory case was transmitting this disease to others. All of the tests known to bacteriological science have been made in his case without result. The matter is to be placed in the hands of the State Health Officials with a view to taking exhaustive measures in an effort to locate the focus of infection.

SCHOOL MEDICAL INSPECTION.

On page 16 the report of this Division appears in full, and the figures given are of a most interesting character. Under the caption of "Exclusion from school," it will be noted that seventy-five children were found who were suffering from

chicken pox, one hundred and sixty-eight had measles, four were afflicted with scarlet fever, six with diphtheria, and many others from different complaints. This record in itself speaks well for the value of this work.

DIVISION OF DAIRY AND MILK INSPECTION.

The work performed in these divisions appears in tabulated form on page 13. Thirty-five dairies in outside counties were inspected and 42 within the city limits were covered. Seven thousand six hundred and seven cows were inspected, 17 were placed under quarantine and 4 were condemned and killed. Owing to the failure of J. Diniz, dairyman at Stockton, and M. Jorgensen at Sacramento, to comply with the requirements of this Department, both of these places were declared insanitary by the dairy inspectors and the shipment of their product into the city was stopped. One hundred and twenty gallons of milk shipped into the city by these firms was stopped in transit and emptied into the bay. This has had the desired effect and these people now appear to be willing to comply with the requirements.

RED PLAGUE SUPPRESSION WORK.

The following table will readily indicate the progress being made in the Municipal Clinic. In connection with the work of this branch same has been highly commended by the existing Grand Jury and steps will be taken by that body to recommend to the Board of Supervisors that this work be placed directly under the jurisdiction of the Department of Public Health.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF DECEMBER, 1911

Six hundred and ninety-one deaths were registered this month, 164 more than in December, 1910, and 121 more than in December, 1909. Annual mortality rate in 1910 per one thousand population was 13.30, this month it is 17.44. In 1909 it was 14.40. The following comparative tables will show the total deaths from all causes during the month of December for the past three years and also from some of the principal causes:

DEATHS.

	1909	1910	1911	From—	1909	1910	1911
Table of deaths, all causes.....	570	527	691				
From—							
Tuberculosis.....	65	62	65	Diseases digestive system.....	41	55	66
Pneumonia.....	28	28	63	Typhoid fever.....	4	2	5
Pneumonia, Broncho.....	18	15	39	Diphtheria.....	6	2	4
Organic heart disease.....	85	86	99	Scarlet fever.....	0	2	1
Cancer (all organs, etc.).....	61	32	45	Whooping cough.....	5	1	3
Brights disease.....	28	31	48	Diseases early infancy.....	19	17	17
				Old age.....	11	4	10
				Deaths from external causes..	49	40	54

BIRTHS.

Births registered, total 543, against 522 in December, 1910, and 548 in the corresponding month of 1909. The annual birth rate in 1910 was 13.17, in 1909 it was 13.83. This month it is 13.71.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1909-1910:

	1909	1910	1911		1909	1910	1911
Diphtheria.....	51	32	27	Mumps.....	1	49	22
Scarlet fever.....	50	43	46	Pneumonia.....	45	40	82
Smallpox.....	6	4	..	Chickenpox.....	57	51	74
Measles.....	55	74	476	Tuberculosis.....	136	134	108
Whooping cough.....	33	15	20	Typhoid fever.....	*24	†45	‡18
*Of these 15 were of local origin and 9 not local.				†Local origin 28, not local 17.			
				‡Local origin 13, not local 5.			

Diphtheria shows a decrease of five cases as compared with the corresponding month in 1910, and 24 less as compared to December, 1909, while this month shows three cases more than in the month of November just closed. Scarlet fever shows no appreciable increase or decrease as compared to 1909-1910, but 24 cases more were reported than in last month. Not one case of smallpox was reported during the month. Measles show a remarkable increase when compared to the two previous years, and appears to be on the increase. Mumps show same number of cases as in November. Chickenpox, 23 cases more. Typhoid fever, 37 cases less than in the same month of 1910, and six less than in 1909, while as compared to November just closed it shows a decrease of 50%. The number of cases of this disease as reported during the month, total 18, and of these 13 were of local origin and five not local.

SCHOOL MEDICAL INSPECTION.

This feature continues to be one of the most important phases of Health Department work, and the report which appears in full on page 16 of this Bulletin, will clearly indicate its importance. A reference to the comparative table shown under contagious diseases reported will show a very marked increase in the number of measles cases reported as compared to previous years. A very large number of these cases were discovered by the Health Inspectresses of Schools, and 136 exclusions were made for this disease alone. Four cases of scarlet fever and three of diphtheria, 37 of chickenpox, were discovered and exclusion followed. There can be no doubt as to the extreme value of this work according to the figures given.

DAIRY AND MILK INSPECTION

One hundred and fourteen dairies in outside counties, and 26 in San Francisco County were inspected during the month. Five thousand seven hundred and fourteen cows were inspected, 16 were placed under quarantine, and three condemned and killed. Forty-five milk cans were condemned as unfit for further use.

Three hundred and eighty-six samples of milk were taken for chemical and bacteriological analyses, 28 of these being from milk wagons, 30 from depots and dairies, 118 from R. R. depots and wharves, 208 from hotels and restaurants. Twenty-nine arrests were made during the month; 16 convictions were obtained; 11 cases were dismissed, and two are still pending. Fines to the amount of \$345.00 were imposed upon various offenders.

FOOD AND MEAT INSPECTION

The reports of these Bureaus will be found on pages 13 and 14, respectively. One thousand two hundred and four inspections were made in the food division, 620 of these covering commission houses, 187 hotels and restaurants, 215 fruit and grocery stores, 43 bakeries, 101 miscellaneous; 3524 bottles and cans of assorted foods and condiments were condemned as unfit and destroyed.

Under the division of meat inspection, a total of 4849 inspections were made, covering abattoirs, markets, wharves, railroad depots and commission houses. Three thousand four hundred pounds of fish, 3036 pounds of beef, 184 calves, 78 sheep, nine lambs, 99 hogs and 1741 chickens were among the articles condemned and destroyed as unfit for food.

CHEMICAL LABORATORY

A full report of the work performed in this division will be found on page 17, and will prove to be of much interest in showing how the samples of milk taken by the different inspectors worked out under chemical analysis; also the arrests made for violation of the milk law. Samples of the drinking water supply of the city, taken for analysis, are fully reported under this heading, likewise samples from the Golden Gate Park and County Line Water supply.

ARRESTS

The full report of arrests made for various violations of health laws and ordinances appears on page 19, and should be consulted in order to readily ascertain the work this Department is doing in the enforcement of health regulations. Thirty-five arrests for various offenses were made during the month, combined with 14 carried over from previous months, making a total of 49 cases to be accounted for. Seventeen were convicted, 17 were dismissed, and 15 cases remain unsettled; four of these from December arrests; 11 remaining from previous months.

BOARD ACTIONS ON INSANITARY PREMISES

The tabulated report on these cases appearing on page 15, hardly gives a fair idea of the real value of the work accomplished in this direction. Fifteen condemnations are shown under this heading. Eleven nuisances were abated by destruction of insanitary structures, and one by vacation, though this report does not indicate that in all during this month 57 insanitary buildings, or structures, were demolished and the different districts affected were thereby cleared of unsightly nuisances. Of this total, 55 were of the refugee shack class, and two were temporary, nondescript structures. The vacation of buildings does not always necessarily mean that the structure is forthwith removed. Constant attention is required on the part of a special inspector to follow up these vacant premises in order to effect their complete abatement, and in many instances this is not accomplished until drastic measures are threatened. The obliteration of the "shack nuisance" is one of the most important pieces of work in which we are engaged, and in due course of time the refugee shack, which is a heritage from the disaster of April, 1906, will be a thing of the past.

132	Clay Street Tank.....	Dec. 20	Clear.....	390	75	315	19	None	None	.012	.066	1	
133	Lombard Street Reservoir.....	Dec. 20	Slightly turbid	208	34	174	19	Trace	None	.010	.096	3	
134	Francisco Street Reservoir.....	Dec. 20	Slightly turbid	261	61	200	15	Trace	None	.008	.096	2	
135	Presidio Heights Reservoir.....	Dec. 20	Clear.....	309	89	220	13	Trace	None	.010	.044	1	
136	Clarendon Heights Reservoir.....	Dec. 20	Slightly turbid	241	68	173	13	None	None	.010	.060	2	

Only such cases as were found sufficiently below standard to warrant arrest are tabulated in full.

The analysis of waters in the Park show the presence of nitrates nine parts to a million as seen in Nos. 118, 119 and 120. Nos. 121 and 122 are undoubtedly from Spring Valley and not from the Park pumping plant.

In reference to the analysis of samples of water taken from the County Line, would state that these are about the same as the analysis in the last report. In reference to Spring Valley would say that in Nos. 126, 127, 128 and 130 the nitrates are present in very minute quantities, just a little bit more than a trace. Nos. 126 and 128 also show the presence of nitrates. This shows a material improvement in these sources upon the November analysis, owing probably to a greater care having been taken by the Company in cleansing their reservoirs. Would state that I ordered these reservoirs cleaned during the month of November.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF JANUARY, 1912

Six hundred and forty-nine deaths were registered this month, 34 more than in January, 1911, and 48 more than in January, 1910. Annual mortality rate in 1911 per one thousand population, was 15.52; this month it was 16.39. In 1910 it was 15.18. The following comparative tables will show the total deaths from all causes during the month of January for the past three years, and also from some of the principal causes:

DEATHS.

	1910	1911	1912		1910	1911	1912
Table of deaths, all causes.....	601	615	649	From—			
From—				Diseases digestive system.....	44	38	50
Tuberculosis.....	83	63	56	Typhoid fever.....	1	8	7
Pneumonia.....	51	53	60	Diphtheria.....	2	2	3
Pneumonia, Broncho.....	17	22	27	Scarlet fever.....	0	3	0
Organic heart disease.....	85	101	103	Whooping cough.....	1	4	1
Cancer (all organs, etc.).....	38	29	36	Diseases early infancy.....	22	12	19
Brights disease.....	29	42	38	Old age.....	14	7	3
				Deaths from external causes..	68	57	61

BIRTHS.

Births registered, total 600, against 518 in January, 1911, and 511 in the corresponding month of 1910. The annual birth rate in 1911 was 13.08, in 1910 it was 12.91. This month it is 15.15.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of cases of the principal contagious diseases reported during the month as compared with the corresponding month in 1910-1911:

	1910	1911	1912		1910	1911	1912
Diphtheria.....	55	40	29	Mumps.....	2	55	38
Scarlet fever.....	59	79	46	Pneumonia.....	78	50	90
Smallpox.....	4	6	0	Chickenpox.....	65	52	74
Measles.....	81	57	1028	Tuberculosis.....	170	124	131
Whooping cough.....	58	16	41	Typhoid fever.....	*17	†20	‡15

*Of these 13 were of local origin and 4 not local.

†Local origin 9, not local 11.

‡Local origin 11, not local 4.

Diphtheria shows a decrease of 11 cases as compared with the corresponding month in 1911, and 26 less as compared to January, 1910, while this month shows two cases less than in the month of December just closed; scarlet fever, 33 less than January, 1911, and 13 less than in 1910. The same number of cases (46) were reported during last month.

Mumps show 16 cases more than in December; chickenpox the same number of cases as in preceding month (74). Typhoid fever shows five cases less than in the same month of 1911, two less than in 1910, and three cases less than in December just closed. The number of cases reported during the month total 15, and of these 11 were of local origin and four not local.

One thousand and twenty-eight cases of measles were reported this month, as against 57 in January, 1911, and 81 in the same month of 1910. This is such a marked increase that some special mention should be made of it at this time. The disease took on an epidemic form and at the close of January the number of cases did not appear to appreciably decrease. The value of School Medical Inspection was here again strongly shown, as 618 children affected with measles were excluded from school through the action of the Health Inspectresses, this being 60% of the total number of cases reported. In an effort to stamp out the contagion, a conference of the Sanitary Inspection Corps, the School Medical Inspection Division, and representatives of the medical profession was held, but at this writing the disease appears to show no sign of abatement.

SCHOOL MEDICAL INSPECTION.

The report of this division appears on page 16, and special attention is called to this feature of our work. Fifty-six children were excluded who were found suffering from chickenpox, seven from diphtheria, 18 from scarlet fever, 36 from mumps, 38 from whooping cough, 14 from contagious skin diseases, 12 from tonsillitis, and three from chorea, besides the 618 measles cases previously mentioned. One thousand and twenty-one contacts were also excluded. This represents but a portion of the work performed in this division, the details appearing in the tabulated report already mentioned.

PLAGUE SUPPRESSION MEASURES

Though the fact is not generally known, the United States government is expending approximately the sum of \$14,000 per month in the work of protecting this city against the possible invasion of bubonic plague. The most important work in this connection is the crusade being made against the gopher and squirrel in the adjacent Bay counties, viz: Alameda, Contra Costa, and Marin. According to the reports of the U. S. P. H. & M. H. S., the date of the last case of human plague was Jan. 30, 1908, last case of rodent plague, Oct. 23, 1908. In addition to the above amount appropriated by the Federal government, the city sets aside from its own funds the sum of \$1500 per month, which is used jointly with the government in the carrying on of this work.

BOARD ACTIONS ON INSANITARY PREMISES

The tabulated report appearing on page 15 of this Bulletin, under the foregoing caption, does not fully indicate the scope of the work performed in the crusade for the betterment of sanitary conditions. The Federal government, in addition to the large field force engaged in work in outside counties, devotes much time and expends a large amount of money in the crusade against the rat within the city limits. In the general plan for the betterment of sanitary conditions the removal of refugee shacks and other insanitary buildings erected hastily after the fire of 1906, has received a large share of attention. In 1907 it was estimated that 5000 refugee shacks were standing. At this writing, approximately 2000 of these remain and the work of eradication of these structures is still going on. The tabulated report on page 15, while showing 11 nuisances abated by demolition and one by vacation, does not give a fair idea of the real work being performed, as this refers in general terms to the total number of cases brought before the Board, but not infrequently one case may embrace a large group of individual dwellings or shacks, as the case may be. After condemnation proceedings have been heard and vacation ordered, it then becomes necessary to see that the vacation order be carried out through the assistance of the Police Department. When the premises are vacated, the nuisance is not always entirely abated and proceedings must then be taken towards demolishing the structure and clearing the surface area, in order to completely destroy rat habitations.

The records for the month of January show that 44 insanitary structures were demolished, 37 of these being refugee shacks, four shack shops and stable, two shack stables and one shack fire ruins.

MONTHLY STATEMENT OF DEATHS

Health Officer.

Sir:—Herewith submit report of the work done in the Chemical Laboratory during the month of January, 1912. The tabulated report shows that 465 analyses were made. As usual milk received our closest attention. The 413 samples were taken from the following sources: shippers, 270 samples, containing 6 sufficiently low to warrant arrest, or 2 2-9% arrests; wagons, 101 samples with 11 low or 10% arrests; restaurants, 25 samples with 7 low or 28% arrests. Only one of the low samples from wagons contained 10% of water, the balance were low in butter fat only.

This shows that the milk shipped into the city is very good, but before it reaches the consumer in the homes and restaurants, a great deal of the milk has been skimmed of a large percentage of its butter fat. Would therefore recommend that we continue our investigation begun upon wagons and restaurants.

Since I made special reports on the waters of wells analyzed would add that since the water of these wells show contamination, it would not be amiss to extend our well investigation to all the dairies which ship milk into the city, because the water is used to wash milk cans and containers, and therefore, if it is impure and contaminated, the milk shipped will likewise be contaminated by containers.

Would therefore recommend that this subject receive your earnest consideration.

CHEMICAL LABORATORY—Continued

WATER SAMPLES TAKEN FROM GOLDEN GATE PARK, SPRING VALLEY WATER COMPANY AND COUNTY LINE.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF FEBRUARY, 1912

Six hundred and fifteen deaths were registered this month, 110 more than in February, 1911, and 113 more than in February, 1910. Annual mortality rate in 1911, per one thousand population, was 12.75; this month it is 15.43. In 1910 it was 12.67. The following comparative tables will show the total deaths from all causes during the month of February for the past three years, and also from some of the principal causes:

DEATHS.

	1910	1911	1912		1910	1911	1912
Table of deaths, all causes.....	502	505	615	From—			
From—				Diseases digestive system.....	43	37	56
Tuberculosis.....	56	56	71	Typhoid fever.....	2	5	5
Pneumonia.....	30	27	39	Diphtheria.....	3	1	3
Pneumonia, Broncho.....	13	23	30	Scarlet fever.....	0	0	1
Organic heart disease.....	58	91	80	Whooping cough.....	3	2	2
Cancer (all organs, etc.).....	37	28	36	Diseases early infancy.....	24	14	23
Bright's disease.....	30	23	42	Old age.....	10	5	7
				Deaths from external causes..	53	48	53

BIRTHS.

Births registered, total 552, against 489 in February, 1911, and 501 in the corresponding month of 1910. The annual birth rate in 1911 was 12.34, in 1910 it was 12.64. This month it is 13.94.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of principal cases of contagious diseases reported during the month as compared with the corresponding month in 1910-11:

	1910	1911	1912		1910	1911	1912
Diphtheria.....	79	25	22	Mumps.....	7	49	41
Scarlet fever.....	60	47	25	Pneumonia.....	47	35	65
Smallpox.....	10	1	0	Chickenpox.....	65	67	65
Measles.....	96	92	1160	Tuberculosis.....	124	95	100
Whooping cough.....	28	27	46	Typhoid fever.....	*17	**10	***16

*Of these 14 were of local origin and 3 not local.

**Local origin 7, not local 3.

***Local origin 10, not local 6.

Diphtheria shows a decrease of three cases as compared to the corresponding month in 1911, and 57 cases less were reported in this month than in February, 1910. January just closed had seven cases more than were reported during this month. Scarlet Fever cases show a 50% reduction over 1911, and 60% decrease as compared to 1910. There were 21 cases less reported in this month than during the month of January. No cases of Smallpox were discovered during the month. Mumps show eight cases less than in January; Chicken-pox two cases less. Typhoid Fever shows six cases more than in the same month of 1911, one less than in 1910, and one more than in January just closed. The number of cases reported during this month total 16, and of these 10 were of local origin and six not local.

One thousand one hundred and sixty cases of Measles were reported during this month, or 132 more than in January. This total indicates a marked increase, but at the close of this month it would appear as if the disease were showing signs of abatement, though numerous cases are still being reported. Owing to the large decrease in school attendance occasioned by this invasion, the rules regarding exclusion have been somewhat modified, particularly where "contacts" are concerned. The wave of Measles that swept over the city appeared to be so general in its scope that it was not possible to locate any particular focus of infection.

It will be noted under the report of the division of school medical inspection that 586 cases of Measles, or about one-half of the cases reported, were discovered by the Health Inspectresses of Schools, thus again strongly exemplifying the value of this work. We have every reason to believe that the report of Measles cases for the coming month of March will show a large falling off.

SCHOOL MEDICAL INSPECTION.

Reference to page 16 of this bulletin will give full detailed particulars as to the work being performed in this division. Twelve thousand four hundred and sixty-six pupils were examined by the inspectresses during the month. One thousand six hundred and fifty-four visits were made to homes, and 536 visits to schools. Fifty-three children were excluded from schools on account of Chicken-pox, three from Diphtheria, three from Scarlet Fever, 43 from Mumps, 24 from Whooping Cough, ten from Tonsillitis, two from contagious skin disease, besides the 586 cases of Measles mentioned in the contagious disease report. Eight hundred and forty-four contacts were also excluded.

RABIES IN DOGS

For the first time in the history of this city Canine Rabies made its appearance in numbers sufficient to demand prompt attention on the part of the Health Authorities. In the month of October, 1911, one case of Canine Rabies made its appearance. This was considered extraordinary, inasmuch as it was the first authenticated case of the disease ever recorded here. On February 1st, 1912, the first of 21 cases, which occurred during this month, was brought to the attention of this Department and immediate steps were taken in an effort to prevent the spread of the disease. A conference was called at which were present representatives of the local Health Department, the State Board of Health, the U. S. Authorities, the Society for the Prevention of Cruelty to Animals, the Board of Supervisors, a number of Veterinary Surgeons, several kennel clubs and others interested in dogs. It appeared as if the first steps necessary to be taken would be to control as far as possible the movements of the thousands of dogs throughout the city, and with this end in view an ordinance was drafted and submitted to the Board of Supervisors for their approval, and adoption, reading as follows:

REQUIRING DOGS TO BE KEPT UNDER RESTRAINT.

Be it ordained by the People of the City and County of San Francisco as follows:

Section 1. Every dog not kept within a sufficient enclosure or led and controlled by a line, rope or chain, or not being effectually muzzled so as to prevent such dog from biting persons or animals, is hereby declared to be a menace to public health and safety.

Section 2. Every person owning or having control of any dog shall effectually muzzle it so as to prevent it from biting persons or animals, provided, however, that no dog need be muzzled while kept within a sufficient enclosure or led and controlled by a line, rope or chain. All muzzles shall be properly adjusted and shall be of a design approved by the Department of Public Health.

Section 3. Every dog not kept within a sufficient enclosure or led and controlled by a line, rope or chain, or not muzzled as required by the provisions of Section 2 hereof, shall be immediately impounded in the public pound by any peace officer or the Pound-keeper.

Section 4. Every person violating any of the provisions of this Ordinance shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not more than fifty (50) dollars or by imprisonment in the county jail for not more than fifty (50) days, or by both such fine and imprisonment.

Section 5. This Ordinance shall take effect and be in force from and after its passage.

At this writing no action had been taken towards the adoption of this proposed ordinance, but we have every reason to believe that this will be made a law within a short time.

Steps were taken to immediately notify the general public of the necessity of reporting to the Health Department all cases of dog bites, and urging the advisability of submitting to the Pasteur Treatment, particularly in cases where bacteriological examination of the brain tissue of dogs inflicting bites revealed the fact that they had been suffering from Rabies. During the month 36 dog bite cases were reported. Of this number five submitted to treatment at the hands of the bacteriologist of this Department, and 44 treatments in all were administered. Pasteur Anti-rabic Virus sufficient to cover all cases was supplied by the State Hygienic Laboratory, these treatments being administered free of charge. No cases of human Rabies developed during this month.

The officials of the public pound, realizing the gravity of the situation, exerted themselves to their utmost in an endeavor to impound all dogs running at large, and the result was that 1,045 dogs were taken up during the month, 799 of which were destroyed. The corresponding month of February, 1911, showed that 639 dogs were taken up and 514 destroyed. The foregoing is given as a preliminary statement of the condition with which we are confronted, and the report which will appear in the March bulletin will deal further with this important subject.

MONTHLY STATEMENT OF DEATHS

CAUSES OF DEATH (International Classification)	Deaths reported during month of Feb., 1912	SEX		AGE BY YEARS											SOCIAL RELATION			COLOR

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF MARCH, 1912

Six hundred and fifty-one deaths were registered this month, 80 more than in March, 1911, and 68 more than in March, 1910. Annual mortality rate in 1911 per one thousand population was 14.42; this month it is 16.44. In 1910 it was 14.72. The following comparative tables will show the total deaths from all causes during the month of March for the past three years, and also from some of the principal causes:

DEATHS.

	1910	1911	1912		1910	1911	1912
Table of deaths, all causes.....	583	571	651	From—			
From—				Diseases digestive system.....	40	41	60
Tuberculosis.....	80	58	66	Typhoid fever.....	5	1	1
Pneumonia.....	34	32	45	Diphtheria.....	3	1	5
Pneumonia, Broncho.....	22	15	23	Scarlet fever.....	0	4	0
Organic heart disease.....	84	92	88	Whooping cough.....	4	3	4
Cancer (all organs, etc.).....	43	32	37	Diseases early infancy.....	20	16	17
Brights disease.....	30	43	43	Old age.....	12	7	10
				Deaths from external causes..	47	54	54

BIRTHS.

Births registered, total 577, against 583 in March, 1911, and 581 in the corresponding month of 1910. The annual birth rate in 1911 was 14.72, in 1910 it was 14.67. This month it is 14.56.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of cases of the principal contagious diseases reported during the month as compared with the corresponding month in 1910-11.

	1910	1911	1912		1910	1911	1912
Diphtheria.....	55	23	26	Mumps.....	8	120	36
Scarlet fever.....	41	88	20	Pneumonia.....	47	47	40
Smallpox.....	8	0	1	Chickenpox.....	148	119	62
Measles.....	230	149	836	Tuberculosis.....	161	117	150
Whooping cough.....	41	77	54	Typhoid fever.....	*25	**11	***12

*Of these 22 were of local origin and 3 not local.

**Local origin 4, not local 7.

***Local origin 9, not local 3.

Diphtheria shows an increase of three cases as compared with the corresponding month in 1911, and 29 less than in March, 1910, while this month shows four cases more than in the month of February just closed; scarlet fever, 68 less than March, 1911, and 21 less than in 1910.

Mumps shows five cases less than in February; chickenpox three cases less. Typhoid fever shows one case more than in the same month of 1911, 13 less than in 1910, and four cases less than in February just closed. The number of cases reported during the month total 12, and of these nine were of local origin and three not local.

Eight hundred and thirty-six cases of measles were reported this month, as against 1028 in January of this year, and 1160 in February just ended, 324 cases less than in the preceding month. At the close of March the disease appears to be rapidly lessening in the number of cases reported, and the epidemic is no doubt fast abating. Of the total number of cases reported during the month, the Health Inspectresses of Schools are credited with 412, or nearly 50% of cases recorded.

CANINE RABIES.

The handling of this feature, which was the subject of special mention in my February report, has taxed the capacity of this Department to its very limit. Two persons who had been bitten by rabid dogs, died during the month, manifesting all the symptoms of hydrophobia, and bacteriological examinations of brain tissue in each case confirmed this diagnosis. These examinations were made by the bacteriologist of this Department, by the Federal authorities, the State Hygienic laboratory, and by Stanford University. In each case reports were submitted to the effect that Negri bodies were found, and animal inoculations, including guinea pigs, rabbits, and a dog, were made in the first case, Frank Anderes, and all developed the characteristic symptoms of rabies.

These facts were given publicity through the medium of the press, and as a result many who had previously not shown any particular interest in the subject, or who had openly questioned the existence of the disease, recognized the gravity of the situation.

The Board of Supervisors, on March 18th, passed the ordinance submitted by this Department (which was quoted in full in the February Bulletin) and entitled "Requiring the Muzzling of Dogs," and the Mayor approved same on March 20th. Since the adoption of this law, hundreds of dogs have appeared upon the streets with muzzles of varying types, from the simple strap restraint to the "basket" shape. While not endorsing any particular make of muzzle, this Department has urged the use of the "basket shape" type as being the most humane and effective.

In order to more effectually impress upon the people the importance of the situation, a circular was prepared by the Society for Prevention of Cruelty to Animals, and is here reproduced on account of its important bearing on this subject.

INFORMATION FOR DOG OWNERS.

Distributed by the San Francisco Society for the Prevention of Cruelty to Animals.

You are respectfully notified that under a new ordinance, No. 1829, all **unlicensed dogs running at large** and not kept within a sufficient enclosure or led by a line, rope or chain, are to be impounded and taken to the Public Pound, 2514 Sixteenth Street, corner of Alabama Street. Under Ordinance 1828, all licensed dogs running at large shall be effectually muzzled until July 1, 1912.

Licenses are issued from the Tax Collector's office, 1219 Market Street, near Eighth, and cost \$2.00 per year, beginning July 1st of each year.

Tags on dogs show ownership. If licensed dogs were not tagged there would be no way of keeping the streets free of vagrant, homeless, stray, starving, diseased and vicious dogs. It is a misdemeanor to allow dogs to run at large without a license tag.

It is a misdemeanor, punishable by a fine or imprisonment for any one to **steal a license tag**.

It is unlawful to allow any dog to run at large in any public park or square, punishable by a fine or imprisonment.

It is unlawful to allow any female dog to run at large while in season.

Persons permitting vicious or dangerous dogs to be at large are liable to prosecution. If any dog bites any person or animal, the owner may be arrested and the Court may order the dog muzzled or killed and the owner fined or imprisoned.

If all dog owners would live up to the rules of law and common sense there would be no cause for periodical attacks on dogs and their owners.

IMPORTANT!—Don't let your dog bark or cry all night. Don't let him trespass on your neighbor's property. Don't let him become a nuisance. Don't let him run after and bark at passers-by.

NEW ORDINANCE NO. 1829.

Concerning Dogs Running at Large.

Be it ordained by the People of the City and County of San Francisco as follows:

Section 1. Every person owning or having control of any dog shall keep the same within a sufficient enclosure, and shall not suffer or permit the same to run at large on any public highway, or street, or sidewalk, or alley, or court, or place, or upon any unfenced lot or property, within the City and County of San Francisco; unless a license for the current year be first paid, as required by Ordinance No. 755; and unless such dog has around its neck a collar, or around its leg a strap, having attached thereto a metallic tag or plate issued by the Tax Collector, having thereon the number of the license issued for said dog, and figures indicating the year for which the license tag has been paid. Every dog not kept within a sufficient enclosure or led and controlled by a line, rope or chain shall be deemed running at large within the meaning of this Ordinance.

Section 2. It shall be unlawful for any person to remove any license tag or plate from any dog belonging to another or to place on any dog any tag or plate for use as a license tag except it be issued by the Tax Collector for that particular dog.

Section 3. No person owning or having control of any dog shall suffer or permit the same under any circumstances to run at large in any public park or public square.

Section 4. It shall be unlawful for any person owning or having control of any female dog to suffer or permit the same to run at large while said dog is in season.

Section 5. Every dog running at large in violation of the provisions of this Ordinance shall be immediately impounded in the public pound.

Section 6. If any dog shall bite any person or animal, within the City and County of San Francisco, and the person or animal so bitten was not at the time trespassing upon the person or property of the owner or person having control of such dog, the owner or person having control of such dog shall be deemed guilty of a misdemeanor and upon the trial of any person charged with the violation of this section the Court may order such dog to be muzzled or destroyed within twenty-four hours, and the Chief of Police shall cause such order to be executed.

Section 7. Every person who shall violate any of the provisions of this Ordinance shall be deemed guilty of a misdemeanor and upon conviction thereof, shall be punished by a fine of not more than fifty (50) dollars, or by imprisonment in the county jail for not more than fifty (50) days, or by both such fine and imprisonment.

Section 8. Ordinance No. 1364, approved December 15, 1904, is hereby repealed.

Section 9. This Ordinance shall take effect and be in force on and after its passage.

Finally passed, Board of Supervisors, San Francisco, March 18, 1912.

J. S. DUNNIGAN, Clerk.

JAMES ROLPH, JR., Mayor.

Approved, San Francisco, March 20, 1912.

The figures of the Public Pound show that during this month 1309 dogs were impounded and 1011 destroyed. In the corresponding month of 1911 there were 760 dogs taken up and 591 destroyed, an increase of approximately 100 per cent.

The figures of the Bacteriological Laboratory of this Department show that since October, 1911 (the date of the first case), to March 31st, 1912, two cases of human rabies, 63 of canine and one of feline have been reported and found positive. One hundred and five dog-bites were reported during this month, and 24 persons submitted to the Pasteur Treatment, this being administered free of charge by the City Bacteriologist. A total of 547 treatments were given in this work.

This subject matter will be treated of further in my April report.

BUREAU OF LABORATORIES

WILFRED H. KELLOGG, M. D.—Director

The following tabulation shows in brief the work of the Laboratories during the month of March, 1912. It will be observed that there has been a marked increase in the amount of work performed both in the Chemical and Bacteriological Laboratories. The increase for both divisions amounts to 33% over the monthly average of last year.

The rabies work alone, while accounting for a total of 53 examinations, really amounts to a doubling of the regular work as the search for negri bodies in the brain tissue of rabid animals is a very tedious process, which in many cases must be supplemented by animal inoculations. The appointment of an Assistant Bacteriologist has enabled us to keep abreast with the work, although at times even now, it is necessary for the whole force to continue on duty until 10 and 11 P. M.

EDW. G. KENDALL, Assistant.

J. HOBSON, Helper.

CHEMICAL DIVISION

GEO. AHLERS, First Assistant Chemist.

ELMER C. NORWOOD, Second Assistant Chemist.

E. KILSBY, Helper.

During the month of March, 1912, 364 samples of milk, 1 Cocoonut Oil, 1 Coffee, 2 Wine, 1 Unknown Substance, 6 Ice Cream, 106 Soft Drinks, 1 Butter, 1 Alcohol, 1 Oyster, 1 Bread, 2 Cream, 1 Hamburg, 1 Cabbage Extract, 3 Lubricating Oils, 1 Unknown Fluid, 1 Corned Beef Brine and 37 Water Samples were analyzed. A total of 531 samples.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF APRIL, 1912

Five hundred and fifty-three deaths were registered this month, 51 more than in April, 1911, and fifteen more than in April, 1910. Annual mortality rate in 1911 per one thousand population, was 12.67, this month it is 13.96. In 1910 it was 13.56. The following comparative tables will show the total deaths from all causes during the month of April for the past three years, and also from some of the principal causes:

DEATHS.

	1910	1911	1912		1910	1911	1912
Table of deaths, all causes.....	538	502	553	From—			
From—				Diseases digestive system.....	41	45	47
Tuberculosis.....	81	63	54	Typhoid fever.....	6	3	2
Pneumonia.....	30	14	32	Diphtheria.....	3	1	0
Pneumonia, Broncho.....	14	8	3	Scarlet fever.....	0	2	0
Organic heart disease.....	84	78	80	Whooping cough.....	3	1	1
Cancer (all organs, etc.).....	29	36	39	Diseases early infancy.....	7	20	28
Brights disease.....	32	40	31	Old age.....	14	4	8
				Deaths from external causes..	55	35	41

BIRTHS.

Births registered, total 608, against 518 in April, 1911, and 532 in the corresponding month of 1910. The annual birth rate in 1911 was 13.08, in 1910 it was 13.44. This month it is 15.36.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of cases of the principal contagious diseases reported during the month as compared with the corresponding month in 1910-1911:

	1910	1911	1912		1910	1911	1912
Diphtheria.....	60	22	20	Mumps.....	18	113	35
Scarlet fever.....	36	73	29	Pneumonia.....	43	24	57
Smallpox.....	5	0	5	Chickenpox.....	72	79	34
Measles.....	199	166	250	Tuberculosis.....	144	81	99
Whooping cough.....	31	58	24	Typhoid fever.....	*16	**23	***6

*Of these 10 were of local origin and 6 not local.

**Local origin 8, not local 15.

***Local origin 5, not local 1.

Diphtheria shows a decrease of 40 cases as compared to April, 1910, and 2 less than in the same month of 1911. March just closed had 6 cases more to its credit than this month.

Scarlet fever shows 44 cases less than in March, 1911, and 13 cases less than the same period of 1910. This month shows 9 cases more than in March.

Five cases of smallpox developed during the month as against one discovered in March. In April, 1910, we had 5 cases of this disease while no cases appeared in the same month of 1911.

Two hundred and fifty cases of measles were recorded during the month. This showing as compared with March just closed is very favorable inasmuch as 836 cases were reported in that month, while 1160 cases appeared in February and 1028 in January. The epidemic appears to be well on the decline, and it would seem from our experience and that of other large cities, that an invasion of this disease once well under way seems impossible of control. It simply appears to run its course and then naturally abates itself. It should be noted that of the 250 cases reported, the Inspecting Nurses in the Division of School Medical Inspection discovered 132 or more than fifty per cent of the total.

Mumps show 1 case less than in March; chickenpox 28 cases less.

Typhoid fever has 6 cases to its credit, a decrease of 100 per cent when compared to March, as 12 cases developed during that month. Of the 6 cases occurring in this month, 5 were of local origin. In April, 1910, 16 cases of typhoid fever were reported and in the same month of 1911, twenty-three were recorded.

SCHOOL MEDICAL INSPECTION.

Seventy-four of our 85 schools were covered during the month, and 9932 pupils were examined. Eight hundred and forty-four visits were made to the homes of pupils. Under the head of "Exclusions," 10 were for scarlet fever, 1 for diphtheria, 25 for chickenpox, 132 for measles, 29 for mumps, 34 for whooping cough, 15 for other ailments and 349 contacts.

A full report of this division appears on page 16.

CANINE RABIES.

Continuing my March report on this subject, I submit the following figures taken from the report of the Director of Laboratories for the month of April, as an indication of the proportions to which the work has grown, this statement covering the month of April exclusively:

RABIES EXAMINATIONS.

Animal.	Positive.	Negative.	Still Pending.	Total.
Dogs	66	20	3	89
Cats	1			1
Goats	1			1

Of the dogs proving positive microscopically, 18 were owned and 48 were strays; 49 were killed, 16 died and 1 not recorded; total 66.

Classification: Shepherd 2, Blood Hound 1, Spitz 6, Spaniel 11, Fox Terrier 7, Bull Terrier 5, Bull 1, New Found-land 1, Pointer 2, Great Dane 1, Setter 3, Mongrel 16, not recorded 11; total 66.

PASTEUR TREATMENTS.

Number of patients who began treatment in April	31
Number of patients who completed treatment in April	37
Total number treated during April.....	44
Number of virus injections administered.....	662

From October 1st, 1911, to April 30th, 1912, 137 cases of "Positive" rabies have been reported. Two of these were human, 131 canine, 2 bovine and 2 feline. Ninety-nine dog bites were reported during this month; treatments administered, etc., are shown in the above table of the Bacteriologist.

In furtherance of the work of prevention of the spread of this disease linen tags were prepared and printed, a copy of same being here reproduced as being of interest.

IMPORTANT NOTICE.

The attention of dog owners is called to the following from an ordinance of the Board of Supervisors, passed March 18, 1912, and

Section 2.—Every person owning or having control of any dog shall effectually muzzle it so as to prevent it from biting persons or animals, provided, however, that no dog need be muzzled while kept within a sufficient enclosure or led and controlled by a line, rope or chain. All muzzles shall be properly adjusted and shall be of a design approved by the Department of Public Health.

Section 3.—Every dog not kept within a sufficient enclosure or led and controlled by a line, rope or chain, and not muzzled as required by the provisions of Section 2 hereof, shall be immediately impounded in the public pound by any peace officer or the Poundkeeper.

Section 4.—Every person violating any of the provisions of this Ordinance shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not more than fifty (50) dollars or by imprisonment in the county jail for not more than fifty (50) days, or by both such fine and imprisonment.

TO THE OWNER—This dog is not effectually muzzled and the muzzle is not the design approved by the Department of Public Health as required by Section 2 of Ordinance 1828.

The design approved by the Department of Public Health is the basket-shaped muzzle which, while permitting free movement of the jaws, prevents the dog from biting. The owner is liable for failure to comply with above requirements.

Any further information will be furnished by the Department of Public Health.

Several thousand of these tags were placed in the hands of the Chief of Police, together with instructions for use of same, which read as follows:

"I have the honor to request that the Police Department assist the Department of Public Health in enforcing Ordinance No. 1829 (New Series), requiring that dogs running at large be muzzled.

"This matter was considered at a meeting of the Hospital and Health Committee of the Board of Supervisors on the 3rd inst. and a communication was sent you requesting this co-operation. We find that many of the dogs running at large are ineffectually muzzled, owing to the use of the strap muzzle which, when left loose, permits the dog to open his mouth, and if drawn tight enough to prevent opening his mouth, is inhuman. The Board of Health has approved the basket shaped muzzle, made of either wire or leather, which permits free movement of the jaws while preventing the dog from biting.

"It is earnestly requested that the linen tags which are furnished you herewith be distributed to the Captains of Police with directions that they be attached to the collars of the dogs ineffectually muzzled, so that the owners of said dogs may be notified that the number of the dog license has been noted by the officer, and that if the owner continues to violate the ordinance he will be arrested.

"It is further requested that the police notify all people owning unmuzzled dogs to muzzle the same, when not led on line, rope or chain. Further, if possible, to hold dogs running at large unmuzzled, and notify the pound, who will call and take charge of them.

"The above measures are necessary owing to the prevalence of rabies among dogs in this city."

The foregoing instructions were carried out with the result that many dogs that had been improperly muzzled, were provided with restraints of an effectual and humane type.

The records of the Public Pound show that 1133 dogs were taken during the month and 869 destroyed.

In April, 1911, 596 were taken and 506 destroyed. This shows an increase of approximately 100 per cent over corresponding period of the year previous.

This subject will be given further space in my report for the month of May.

BUREAU OF LABORATORIES

WILFRED H. KELLOGG, M. D.—Director

The table of rabies is especially interesting showing as it does the number and variety of animals found infected with this disease, the breed of dogs infected, the number of people taking the Pasteur treatment for bites by rabid animals and the number of such treatments administered.

On comparison with last month's report an increase of 100% in the number of rabid animals found is a significant commentary on the enforcement of the muzzling ordinance. One rabid dog that bit several people on Market street was wearing at the time a muzzle which could not have been very effective. The figures showing the amount of work performed in both laboratories are exceedingly gratifying as a comparison with last year's records shows an actual doubling of the work:

BACTERIOLOGICAL DIVISION

E. G. KENDALL, Asst. Bact.

E. HUTCHING, Asst. Bact.

J. HOBSON, Helper.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF MAY, 1912.

Five hundred and thirty-seven deaths were registered this month, 18 less than in May of 1911, and three more than in May, 1910. Annual mortality rate in 1911 per one thousand population was 11.68; this month it is 11.30. In 1910 it was 11.24. The following comparative tables will show the total number of deaths from all causes during the month of May for the past three years, and also from some of the principal causes:

DEATHS.

	1910	1911	1912		1910	1911	1912
Table of deaths, all causes.....	534	555	557	From—			
From—				Diseases digestive system.....	42	40	44
Tuberculosis.....	52	62	59	Typhoid fever.....	5	7	2
Pneumonia.....	32	29	18	Diphtheria.....	5	2	2
Pneumonia, Broncho.....	18	5	15	Scarlet fever.....	2	3	0
Organic heart disease.....	72	74	89	Whooping cough.....	7	4	2
Cancer (all organs, etc.).....	32	53	36	Diseases early infancy.....	21	19	12
Brights disease.....	33	41	40	Old age.....	5	8	6
				Deaths from external causes..	44	43	51

BIRTHS.

Births registered, total 560, against 627 in May, 1911, and 584 in the corresponding month of 1910. The annual birth rate in 1911 was 15.84, in 1910 it was 14.74. This month it is 14.03.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of cases of the principal contagious diseases reported during the month as compared with the corresponding month in 1910-11:

	1910	1911	1912		1910	1911	1912
Diphtheria.....	43	23	15	Mumps.....	23	69	18
Scarlet fever.....	50	67	16	Pneumonia.....	59	28	32
Smallpox.....	2	1	4	Chickenpox.....	44	68	59
Measles.....	171	280	91	Tuberculosis.....	122	102	98
Whooping cough.....	61	59	34	Typhoid fever.....	*26	**14	***14

*Of these 21 were of local origin and 5 not local.

**Local origin 8, not local 6.

***Local origin 6, not local 8.

Diphtheria shows a decrease of eight cases as compared with the corresponding month in 1911, and eight less than in May, 1910, while this month shows five cases less than in the month of April just closed; scarlet fever 51 less than in May, 1911, and 34 less than in 1910. This month shows 13 cases less than the preceding month.

Mumps shows 17 cases less than in April; chicken pox 25 more Typhoid fever shows the same number of cases as in May, 1911, 12 less than in 1910 and eight more than in April just closed. The number of cases reported during the month total 14, and of these six were of local origin and eight not local.

Ninety-one cases of measles were reported this month, as against 250 recorded last month, 836 in March of this year; May, 1911, had 280 cases to its credit, and 171 cases were reported in the same month of 1910. From these figures it would appear as if our epidemic of the early part of the year had run its course.

SCHOOL MEDICAL INSPECTION.

Seventy-two schools were covered this month out of 85 in operation.

Eight thousand and twenty-eight pupils were examined in the schools and 542 "home" visits were made by Inspectresses. Two hundred and twenty-four "exclusions" took place—30 for chicken pox, for diphtheria seven, scarlet fever-three, measles 27, mumps nine, whooping cough 25, tonsillitis nine, "contacts" 114.

The report of this Division, which appears on page 16, contains some very interesting data on School Inspection work.

RECORD OF ARRESTS.

Under this report, which appears on page 19, it will be noted that Joseph Fassler, arrested on August 26th, 1910, for violation of Ordinance No. 731 (regulating the keeping of cattle), was "found guilty." In August, 1910, warrants for arrest were issued against 11 dairy and stock men operating within the city limits for violating the ordinance herein mentioned, a particular section thereof reading as follows:

"Any person, firm or corporation may keep two or more cows if the person, firm or corporation so keeping the same shall set apart for the use of each two cows so kept at least one acre of land, and such cows shall have full access thereto."

But one of the defendants (Fassler) went to trial in the Police Court as a "test" case. He was found "guilty" August 19th, 1911, and a fine of \$100 was imposed.

The case was promptly appealed by the defendant and taken to the Superior Court where the judgment of the lower court was sustained, on April 6th, 1912, thus upholding the legality of this ordinance and making it possible for the Health Department to proceed and enforce the law. This will be done as rapidly as legal formalities will permit, and nuisances of long standing will in due course of time be entirely abated.

CANINE RABIES.

Following up my report of April on this subject, would state that the number of cases reported during this month would indicate that the disease is not strongly on the decline, 44 cases of "Positive" canine rabies being registered as against 71 in the month of April. A decrease of approximately 32 per cent.

This decrease is no doubt due partly to the proper muzzling of dogs, and the work of the Public Pound in capturing and destroying stray dogs aids largely in bringing the figures down. The records of the Pound show that during this month 817 dogs were captured and 573 destroyed. In the corresponding month of last year 801 were taken and 567 disposed of. While these figures do not show any marked increase in the number of dogs taken up for this month, it should be borne in mind that in April just closed 1133 were impounded and 869 executed, and in March 1309 were seized and 1011 killed, making a total of stray animals disposed of in the last three months of 2453.

The terms of Ordinance No. 1829 (muzzling of dogs) have apparently not been strictly observed by many dog owners, and as a consequence the Chief of Police has been requested by this Department to issue orders to patrolmen to rigidly enforce this law.

The life of the ordinance in question will expire on June 30th, 1912, and in view of the existing conditions the Board of Supervisors will be asked to extend same until such time as this disease is thoroughly stamped out.

The following figures from the Bacteriological Laboratory covering month of May will no doubt prove of interest:

RABIES EXAMINATIONS.

Animal.	Positive.	Negative.	Still Pending.	Total.
Dogs	46	10	Doubtful 1 Unfinished 1	58
Goats	1	1		2
Coyote		1		1
	<u>47</u>	<u>12</u>	<u>2</u>	<u>61</u>

CLASSIFICATION OF RABID DOGS.

Spaniels	4	Ayrdale Terrier.....	1
Fox Terriers.....	7	Irish Terrier.....	1
Setters	6	Spitz	4
Pomeranian Lap.....	1	Wolf Hound.....	1
Collies	4	Mongrels.....	12
Bulls	2	Not Recorded.....	3

PASTEUR TREATMENTS.

Number of patients who began treatment in May.....	20
Number of patients who completed treatment in May.....	26
Total number treated during May.....	41
Number of virus injections administered	537

Since February 1st, 1912, a total of 299 dog bites have been reported to this office. This matter will be dealt with further in my June report.

BUREAU OF LABORATORIES

WILFRED H. KELLOGG, M. D.—Director

The number of animals examined for rabies is less than the preceding month by about 34%. The number of animals found rabid was 47, as against 70 for April, a decrease of about 32%.

This decrease is due partly to the muzzling of dogs but owing to the lax enforcement of the ordinance regulating such feature, the destruction of stray dogs by the Pound is probably the most important factor.

In the Bacteriological Division, the examination of milk sediment has been begun, this process being in addition to the plating of all samples and the chemical examination. The method used is that recommended by Slack of the Committee on Milk Analysis of the American Public Health Association, with the modification that we stain the smear with a very dilute solution of fuchsin and methylene blue after fixing for a few minutes in equal parts of absolute alcohol and sulphuric ether.

The double staining shows up the bacteria and leucocytes to great advantage.

BACTERIOLOGICAL DIVISION

E. G. KENDALL, Asst. Bact.

E. HUTSCHING, Asst. Bact.

J. HOBSON, Helper.

Annual Rate 16.59

Marriage licenses issued 635

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

FOR THE MONTH OF JUNE, 1912.

Five hundred and twenty-one deaths were registered this month, 18 more than in June, 1911, and 79 more than in June, 1910. Annual mortality rate in 1911 per 1,000 population was 10.59; this month it is 10.96; in 1910 it was 9.30. The following comparative tables will show the total deaths from all causes during the month of June for the past three years and also from some of the principal causes:

DEATHS.

	1910	1911	1912
Table of deaths, all causes.....	442	503	521
Tuberculosis	48	48	53
Pneumonia	15	31	13
Pneumonia, Broncho	18	15	5
Organic heart disease.....	73	65	91
Cancer (all organs, etc.).....	35	39	55
Bright's Disease	24	24	29
Diseases digestive system.....	47	50	58
Typhoid Fever	10	6	6
Diphtheria	6	2	3
Scarlet Fever	1	1	0
Whooping Cough	3	4	0
Diseases early infancy	11	15	25
Old age	12	12	9
Deaths from external causes.....	37	43	49

BIRTHS.

Births registered, total 657, against 602 in June, 1911, and 536 in the corresponding month of 1910. The annual birth rate in 1911 was 15.20, in 1910 it was 13.53. This month it is 16.59.

CONTAGIOUS DISEASES REPORTED.

The following table will indicate the number of cases of the principal contagious diseases reported during the month as compared with the corresponding month in 1910-11:

	1910	1911	1912		1910	1911	1912
Diphtheria.....	33	12	21	Mumps.....	12	13	21
Scarlet fever.....	33	67	6	Pneumonia.....	32	52	19
Smallpox.....	1	1	29	Chickenpox.....	7	23	50
Measles.....	106	171	34	Tuberculosis.....	107	72	122
Whooping cough.....	38	19	37	Typhoid fever.....	*29	**16	***13

*Of these 14 were of local origin and 15 not local.

**Local origin 8, not local 8.

***Local origin 8, not local 5.

Diphtheria shows a decrease of 12 cases as compared to June, 1910, and nine more than in the same month of 1911. May, just closed, had six cases less to its credit than this month.

Scarlet fever shows 61 cases less than in June, 1911, and 27 less than the same period of 1910. This month shows 10 cases less than in May.

Twenty-nine cases of smallpox developed during the month, as against four discovered in March. In June, 1910, we had but one case of this disease, and one also appeared in the same month of 1911.

Thirty-four cases of measles were recorded during this month. May had 91 cases; April, 250; March, 836; February, 1,160. These figures tell the story of the gradual decline of this disease, which appears to be now assuming normal proportions. Of the 32 cases reported, 14 were discovered in school by the Health Inspectresses.

Mumps show three cases more than in May; chickenpox nine cases more.

Typhoid fever has 13 cases to its credit, decrease of one when compared to May. Of the 13 cases occurring in this month, eight were of local origin. In June, 1910, 29 cases were reported and in the same month of 1911, 16 were recorded.

SCHOOL MEDICAL INSPECTION.

Out of an enrollment of 34,431 children in 74 schools, 8,359 pupils were examined by the Nurses and 1,562 by the Inspector.

In addition to this the Inspectresses made 609 "Home Visits."

Exclusions from school as suffering from disease or as "contacts" were made as follows:

Smallpox.....	9
Scarlet Fever.....	3
Measles.....	14
Whooping Cough.....	37
Chickenpox.....	22
Diphtheria.....	3
Mumps.....	9
Other diseases.....	7

"Contacts" numbered 110.

A complete detailed report of this division appears on page 16.

CANINE RABIES.

Continuing my May report on this subject, it will be noted from the figures submitted by the Director of Laboratories that this disease appears to be on the wane. The number of positive animal cases appearing this month were 29; in May 47 were recorded, and April had 71 cases. These figures show the gradual decline of the invasion and the precautions taken by this Department to check its spread have produced results.

The "dog muzzling" ordinance has been renewed, to continue in force until December 31, 1912, and the Chief of Police has issued orders to all patrolmen to vigorously enforce the requirements thereof.

While the complaint appears to be on the decline, it is our intention to pursue our work of prevention until it has resulted in the total eradication of the malady.

One death from hydrophobia was registered during this month. The victim, a man 69 years of age, was bitten by a rabid dog on April 28th, 1912, began taking Pasteur treatment on May 3d and on May 23d treatment was completed, no untoward symptoms showing themselves at that time. He took sick on May 27th and died June 2d with symptoms resembling rabies. An examination of the brain tissue developed presence of Negri bodies, and a rabbit inoculated intracranially with emulsion of brain substance, developed indications of rabies. The rabbit was chloroformed and on post-mortem Negri bodies were found in the brain, thus proving that the diagnosis of rabies in the human case was correct.

The following figures taken from the report of the Bacteriologist for the month of June are submitted as being of interest:

RABIES EXAMINATIONS.

Animal.	Positive.	Negative.	Total.
Dogs	27	7	34
Cats.....	1	0	1
Goats	0	1	1
Coyote	0	4	4
Human	1	0	1
Cow.....	0	1	1
			42

CLASSIFICATION OF RABID DOGS.

Collies	2	Mongrels.....	7
Fox Terriers.....	5	Cocker Spaniels.....	7
Bull Terriers	2	Bulls	2
Spitz	1	Not Recorded.....	5

PASTEUR TREATMENTS.

Number of patients who began treatment in June	13
Number of patients who completed treatment in June.	18
Total number treated during June.....	28
Number of virus injections administered	400

The records of the Public Pound show that during this month 839 dogs were captured and 494 destroyed. In the corresponding month of 1911, the record shows 643 taken and 431 disposed of.

The history of this work will be continued in my July report.

MONTHLY STATEMENT OF DEATHS

BUREAU OF LABORATORIES

WILFRED H. KELLOGG, M. D.—Director

The number of rabies examinations, it will be observed, shows a marked decrease over the figures for the preceding month, the number of positive cases being 29, as against 47 for May.

The total work performed in the laboratories shows an increase over the month before, due to the increasing application of the milk sediment test begun last month. This procedure has demonstrated itself to be the best method of examining milk, as more can be learned regarding the safety of a given sample as an article of diet by examining the stained sediment than by all the other processes together.

A graphic example of the value of the method was furnished by two or three instances in which the slide examination showed numerous streptococci and pus cells. Inspection of the dairies producing the milk resulted in the discovery in one herd of two cases of suppurative disease of the udder, and in another herd several cattle were found suffering from pyemia and abscess of the frontal sinus, following the operation of dehorning.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of July, 1912.

Five hundred and thirty-three deaths were registered during the month, 11 more than in the preceding month. The death rate for June was 13.15 per one thousand of population. This month it is 13.46.

The table here presented will show the rise and fall of the death rate for the month of July from the years 1907 to 1912 (both inclusive).

The number of deaths from principal diseases during the same period are also shown:

DEATHS

	1907	1908	1909	1910	1911	1912
Total, from all causes.....	532	486	462	533	427	533

Diseases early infancy	16	23	29	20	14	30
Old age	11	4	11	6	5	11
External causes	59	54	47	48	41	62

BIRTHS

Births registered, total 602, against 652 in June and 523 in the corresponding month of 1910. The annual birth rate in 1911 was 16.46; in 1910 it was 13.20. This month it is 15.10.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-07.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of July since the year 1907. These comparisons will be found interesting, showing as they do the fluctuations of these diseases for the same monthly period of the different years:

	1907	1908	1909	1910	1911	1912
Diphtheria	38	35	20	27	14	28
Scarlet fever	10	6	23	17	28	2
Measles	60	37	14	37	46	12
Mumps	*	2	3	4	9	12
Whooping Cough	18	5	27	59	27	7
Chicken pox	10	10	4	6	14	22
Variola	11	12	0	1	1	16
Pneumonia	*	24	30	42	27	20
Tuberculosis (Pul.)	*	74	108	115	61	77
†Typhoid fever	42	21	35	26	13	105
†Local origin	36	*	*	15	8	87

*Cases not reported.

Diphtheria shows an increase of 7 cases over the month of June just closed.

Scarlet fever 4 cases less.
Smallpox 13 cases less.
Measles 22 cases less.
Whooping cough 30 cases less.
Chickenpox 28 cases less.
Typhoid fever 92 cases more.

As will be noted by the foregoing comparative table, 105 cases of typhoid fever developed during the month, 87 being of local origin.

An outbreak of this disease occurred, which confined itself principally to the Potrero District in the southern part of the City, particularly in an area of several well-populated blocks, entirely lacking in sewer facilities, the plumbing fixtures of many dwellings draining into cesspools dug out of almost solid rock, these rapidly filling to overflowing and discharging their contents over the surrounding sloping surface area. Undoubtedly the source of origin of many of the cases which developed in this locality (53 in number) can be safely attributed to the insanitary surroundings as herein described, though our investigations pointed strongly to possible milk infection, as in tracing the history of these cases we found that a certain dairy depot was supplying many of the families wherein the disease occurred, and likewise was furnishing milk to several restaurants where some of the victims were in the habit of eating. Acting on the side of precaution, this department at once took the necessary steps to improve the sanitary condition of the dairy depot in question in order to insure the proper handling of their products and thus tend to minimize the possibility of danger of infection from this quarter.

A joint sanitary survey of the affected locality has been made by the Engineers of the Board of Public Works and the officials of the Health Department with the result that public proceedings will be instituted to install the necessary main sewers in this district, and the discontinuance of the use of cesspools which are a constant menace to health, will no doubt operate to prevent a recurrence of a similar epidemic.

In our work of investigation we found that owing to a lack of pressure the locality mentioned herein was suffering on account of an inadequate water supply and upon our urgent request the water company has agreed to construct a reservoir which will, when completed, insure plenty of water for drinking and toilet purposes.

Most of the other cases of typhoid reported outside of the particular district already mentioned were those usually occurring at this season of the year, the history in many instances pointing to infection from food or water used by persons frequenting the various summer resorts, though "carriers" appear to be an important factor in this particular epidemic. The history of this outbreak will be continued in my report covering the month of August.

CANINE RABIES

Compared with the figures as submitted in my June report, the enumeration of cases of this disease indicate a gradual decline. In the preceding month 29 positive animal cases were reported as against 20 for this month.

Two deaths from rabies were registered and post-mortem examinations in each case revealed the presence of Negri bodies in the brain, a coroner's jury in each instance returning a verdict of "death from hydrophobia."

Notwithstanding the persistent efforts of this department to impress upon the public the absolute necessity of recognizing the value of the "dog muzzling" ordinance, it seems to be a law more honored in the breach than in the observance, and the Chief of Police will be called upon to vigorously enforce the provisions of this measure.

As a part of this report the following figures taken from the report of the Bacteriologist of the Department are here submitted:

RABIES EXAMINATIONS

Animal	Positive	Negative	Total
Dogs	17	8	25
Goats	1		1
Calf	1		1
Coyotes		2	2
Cat	1		1
Human	1		1
Total.	21	10	31

PASTEUR TREATMENTS

Number of patients who began treatment in July	4
Number of patients who completed treatment in July	12
Total number treated in July	13
Total number of virus injections administered	141

CLASSIFICATION OF RABID ANIMALS

Cocker spaniels, 2; Mongrels, 19; Irish setter, 1; Chinese chow, 1; Spaniels, 1; Spitz, 2.

The Public Pound during the month took up 618 dogs and destroyed 502. During the same period of 1911 the record shows 334 impounded and 433 disposed of, 99 of these being holdovers from the previous month.

This subject will be given further space in my report to appear in Bulletin for August.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of August, 1912.

Four hundred and ninety-eight deaths were registered during the month, 35 less than in the preceding month. The death rate for July was 13.46 per one thousand of population. This month it is 12.57.

The table here presented will show the rise and fall of the death rate for the month of August, from the years 1907 to 1912, (both inclusive).

The number of deaths from principal diseases during the same period are also shown:

DEATHS

	1907	1908	1909	1910	1911	1912
Total from all causes	490	488	450	499	469	498

Diseases early infancy	18	28	16	19	12	21
Old age	5	7	13	2	7	2
External causes	51	54	50	38	35	45

BIRTHS

Births registered, total 589, against 602 in July. 601 was the record for August 1911 and 554 for the corresponding month of 1910. The annual birth rate in 1910 was 13.99, in 1911 it was 15.18. This month it is 14.88.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-07.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of August since the year 1907. These comparisons will be found interesting, showing as they do the fluctuations of these diseases for the same monthly period of the different years.

	1907	1908	1909	1910	1911	1912
Diphtheria	36	30	27	32	16	19
Scarlet fever	3	11	22	27	13	3
Measles	55	32	11	34	58	12
Mumps	* 1	4	26	3	17	11
Whooping cough	5	17	11	44	16	12
Chickenpox	3	13	2	18	28	7
Variola	9	16	...	1	2	18
Pneumonia	*	10	32	52	22	27
Tuberculosis (Pul.)	*	91	90	114	77	89
†Typhoid fever	32	24	38	42	14	53
†Local origin	36	*	*	7	7	26

*Cases not reported.

Diphtheria shows a decrease of 11 cases as compared to the month of July just closed.

Scarlet fever	1 case more
Variola	2 cases more
Measles	Same as preceding month
Whooping cough	5 cases more
Chickenpox	15 cases less
Typhoid fever	52 cases less

As will be noted typhoid fever cases show a falling off of 50% in the total number reported during the preceding month. 26 cases of local origin developed as against 87 in July, or a net decrease of approximately 70%. This indicates a decided abatement in the endemic mentioned in my July report.

Further investigation of the causes leading to said outbreak revealed a condition that would account in a great measure for the existence of the disease.

Many overflowing cesspools draining to a common center formed a mire of filth, and water pipes exposed in this mass were found broken in several places, caused by vehicles passing over them, thereby permitting direct contamination of the water supply. Garbage, refuse and other decaying animal and vegetable matter littered the streets and flies were very numerous.

Measures were at once taken to improve hygienic conditions by the free use of chloride of lime and cresol compound which were generously employed to disinfect the polluted surface area of streets and yards, and a liberal supply of both of these preparations were given to the residents of the district with instructions to not be sparing in its distribution.

Directions were given relative to construction of proper cesspools (the district being unsewered) and printed notices relative to danger from contact, flies, etc., were delivered to all householders.

Special attention was given to the water supply of the locality affected, with the result that storage reservoirs were thoroughly cleansed and a special tank was installed in order to increase the pressure.

The conclusions arrived at in this endemic are as follows:

1st: That all of the cases in this locality were indirectly, if not directly traceable to milk infection, which infection may have been transient in its nature and which occurred sometime in May and continued through to the middle of June.

2nd: That water was not a factor as far as local cases were concerned.

3rd: That a large number of the cases excepting for the simultaneous dates of onset, could be justly classed as direct "contacts."

4th: That flies as carriers in this outbreak can safely be excluded because of the small per cent of cases that might be indefinitely traced to such source.

5th: That from the mildness of the cases and the repeated negative Widal's, stool and urine reactions, and the rapid recoveries there has been an element of doubt in the minds of the attending physicians as to the correctness of diagnosis in many cases.

6th: That the cases occurring in other parts of the city are of two types so far as source of origin is concerned; the first are a number who patronized restaurants supplied with milk from a suspected dairy depot, and second the others are the result of infection without the city, but which are impossible to work out owing to incomplete or conflicting data, as well as the difficulty experienced in obtaining definite histories.

CANINE RABIES

The number of positive cases of this disease reported during the month (seventeen in number) seems to indicate a slight falling off as compared to July when 20 cases were confirmed, June showing 29 cases.

This may be accounted for in a measure by the fact that the number of dogs running about the streets during the daylight has diminished to some extent. Rather than comply with the provisions of the law which requires dogs running at large to be muzzled or led by a rope or chain, many owners prefer to keep their animals within enclosures during the day and permit them to run about at night unmuzzled. While this practice continues infection is bound to be communicated, and unless dog owners can be impressed with the necessity of observing sensible regulations for the welfare of human beings and likewise the protection of their household pets we may expect to have cases of rabies develop for an indefinite length of time.

Herewith I submit figures taken from the report of the Director of Laboratories covering the month of August:

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total
Dogs	17	7	3	27

Classified as follows: Collie, 1; Bull, 1; Bull Terrier, 1; Fox Terrier, 1; Setter, 1; Spaniels, 2; Spitz, 2; Mongrels, 8.

PASTEUR TREATMENTS

Number of patients who began treatment in August.....	16
Number of patients who completed treatment in August.....	9
Total number treated in August.....	17
Number of virus injections administered.....	339

The Public Pound captured 644 and executed 551 dogs during the month, as compared to 817 impounded and 570 destroyed in August 1911.

REPORT OF CITY PHYSICIAN AND BUREAU OF TROPICAL DISEASES.

HERBERT GUNN, M. D., City Physician.

Number of visits.....	25
Number of patients at clinic, new.....	25
Number of patients at clinic, re-examination.....	26— 51
Number of patients at City Prison.....	89
Number of vaccinations	220
Number of vaccinations, redressings.....	90
Number of special examinations, employees	1

LABORATORY

	Neg.	Pos.	Reax.
Stool examinations	11	7	3
Miscellaneous	8	1	—

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of September, 1912.

Four hundred and eighty deaths were registered during the month, 18 less than in the preceding month. The death rate for August was 12.57 per thousand of population. This month it is 12.12.

The table here presented will show the rise and fall of the death rate for the month of September from the years 1907 to 1912 (both inclusive).

The number of deaths from principal diseases during the same period are also shown:

DEATHS

BIRTHS

Births registered total 581 against 589 in August and 452 in the corresponding month of 1910. The annual birth rate for September, 1911, was 13.78; in 1910 it was 13.81. This month it is 14.67.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-07.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of September since the year 1907:

	1907	1908	1909	1910	1911	1912
Diphtheria	30	36	30	30	13	26
Scarlet fever	17	18	47	26	4	7
Measles	7	31	15	69	150	3
Mumps	* 1	* 5	18	2	22	30
Whooping cough	* 6	* 7	26	26	33	22
Chickenpox	10	7	11	39	54	5
Variola	9	12	0	0	3	14
Pneumonia	*	13	26	43	30	33
Tuberculosis (Pul.)	*	88	112	93	75	76
†Typhoid fever	39	22	26	35	48	23
‡Local origin	*	*	*	17	28	6

*Cases not reported.

Diphtheria shows an increase of 7 cases over the month of August just closed.

Scarlet fever	4 cases more
Variola	4 cases less
Measles	9 cases less
Whooping cough	10 cases more
Chickenpox	2 cases less
Typhoid fever	30 cases less

The foregoing figures relative to Typhoid Fever show a most satisfactory decline of cases of this disease. From 105 in July to 53 in August and 23 in this month is evidence that the efforts of the department to check the spread of this complaint have been productive of results. The endemic mentioned in my August report has been brought to an end. This was accomplished only through untiring and persistent work in the direction of eliminating sources of infection and regulation of "contacts," placing of infected districts in a sanitary condition, and improving the surroundings of certain dairy depots believed to be responsible to a large extent for the outbreak through improper methods of handling milk for delivery.

CANINE RABIES.

Following up my previous reports on this subject, I herewith submit a detailed statement showing history of invasion since October, 1911, and particularly from February, 1912, when the cases began to get numerous.

CASES REPORTED AND FOUND POSITIVE

Dog bites reported in May	59	
Dog bites reported in June	71	
Dog bites reported in July	47	
Dog bites reported in August	66	
Dog bites reported in September	65	548

The figures of the Public Pound show 739 dogs impounded and 581 destroyed during this month. In the corresponding month of 1911, dogs to the number of 689 were taken up, and 549 put to death.

The dog catch, I regret to state, appears to have fallen off to a marked degree, and we will certainly reap the benefit in the next few months of carelessness or indifference on the part of dog owners who allow their animals to run unmuzzled or unleashed, as it is very certain that the disease has not been entirely stamped out.

DISEASES ENCOUNTERED (TROPICAL)

Hookworm	4	Taenia nana	2
Tricocephalus Dispar	6	Ascaris	2
Strongyloides Intestinalis	2		

An address was made, by request, on the subject of Hookworm in California, before the conference of Health Officers at Berkeley, September 26th, 1912, and as a result the following action was taken:—

“It was moved and unanimously carried:

“That it is the sense of the third annual conference of the State, County and Municipal Health Officials that the Hookworm disease has become a serious menace and that steps should be taken to investigate the cause and to check the further spread of the disease, and, furthermore, that the Governor of this State be requested to appoint a commission from the interested organizations to serve without pay toward this end.”

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of October, 1912.

Five hundred and sixty-four deaths were registered during the month, 84 more than in the preceding month. The death rate for September was 12.12 per one thousand population. This month it is 14.23.

The table here presented will show the rise and fall of the death rate for the month of October from the years 1906 to 1912 (both inclusive).

The number of deaths from principal diseases during the same period are also shown:—

DEATHS

	1906	1907	1908	1909	1910	1911	1912
Total from all causes	513	529	498	518	572	541	564
Including deaths from—

Pneumonia	35	24	23	34	25	23	14
Pneumonia, Broncho	26	13	14	18	14	19	19
Organic heart disease	62	63	54	74	80	71	92
Cancer (all organs, etc.)	34	36	28	40	43	32	45
Bright's disease	19	28	34	19	31	25	41
Diseases digestive organs	52	54	45	54	84	77	72
Typhoid fever	40	13	10	6	6	8	5
Diphtheria	3	10	3	—	3	—	1
Scarlet fever	1	—	2	1	1	—	—
Whooping cough	1	2	2	6	1	2	6
Diseases early infancy	18	15	26	17	19	22	19
Old age	10	14	6	8	3	14	2
External causes	46	50	49	57	38	36	55

BIRTHS

Births registered, total 613 against 581 in September. 590 was the record for October 1911, and 583 for the corresponding month of 1910. The annual birth rate in 1910 was 14.72, in 1911 it was 14.90. This month it is 15.48.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of October since the year 1906. These comparisons will be found interesting, showing as they do the fluctuations of these diseases for the same monthly period of the different years:

	1906	1907	1908	1909	1910	1911	1912
Diphtheria	17	41	36	31	22	16	30

*Cases not reported.

Diphtheria shows a decrease of 4 cases as compared to the month of September just closed.

Scarlet fever	3 cases less
Variola	13 cases less
Measles	Same as preceding month
Whooping cough	12 cases more
Chickenpox	29 cases less
Typhoid fever	9 cases more

It will be noted that Typhoid Fever has taken a slight rise when compared to the preceding month, the figures indicating 35 percent increase.

This is not considered as being unusual as reference to the foregoing table will show that this disease rises and falls during the autumnal months with more or less regularity. Twenty of the cases reported were of local origin while in September six were credited to the city proper.

Many cases occurring in other counties are sent to local hospitals for treatment, and histories in numerous instances indicate a source of infection from without the city. These facts should be considered in making comparisons on the fluctuations of this disease.

Smallpox cases show a marked decline as compared to September. This, however, is not an indication that we are entirely immune from an invasion of this complaint. Judging from past experience we may expect to encounter more cases during the winter months than in any other season and the suspension of the compulsory vaccination law no doubt leaves us more open to attack from this quarter which in a great measure could be prevented had we some regulations to prevent the spread of infection through the application of prophylactic measures.

CANINE RABIES

The number of positive cases of this disease still continue to show a steady decline, 9 cases being recorded this month as against 13 in September and 16 in August.

This is a satisfactory showing on paper, yet it must be borne in mind that the danger of cases of this disease suddenly increasing is not entirely remote. Last year at this time one case was reported and no further cases developed until February following when the rapid invasion of cases began and unless the dog population is kept down to the minimum and the multiplication of stray dogs prevented as far as it may be possible to accomplish this end, there is always the possibility of cases recurring.

In an effort to prevent this I communicated with the Superintendent of the Public Pound urging upon his department the necessity of impounding all dogs running at large where the provisions of the "muzzling" ordinance were not being observed. In reply said official stated that at an expense of \$2300 an auto truck had been installed in order to facilitate this work and said machine covers over 1,000 miles per month, thus giving better service than the old plan of using horse drawn vehicles.

A comparative statement was furnished by the Superintendent showing that in the four months of 1910 (July to October, inclusive) 2578 dogs were impounded; during the same period of 1911 the catch numbered 2541; in the same period of 1912 dogs to the number of 2742 were taken.

Through the employment of the extra equipment in the latter part of the fiscal year 1911-12, the records show that 1622 dogs were destroyed in excess of the previous year. This, therefore, with an increase of 201 dogs impounded in the first four months of 1912 over the same period of 1911 and with 1622 dogs less in the canine population over last year shows that the Public Pound officials have been doing good work. During this month 603 dogs were taken and 420 destroyed. During October, 1911, the records show that 701 were captured and 576 put to death.

The following figures taken from the report of the Director of Laboratories is submitted as being of interest in connection with the foregoing statements:

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total
Dogs.....	9	6	2	17

Classified as follows Spaniels, 2; Gordon Setter 1, Fox Terrier, 1; Mongrels, 4; not recorded, 1.

PASTEUR TREATMENTS

Number of patients who began treatment in October.....	11
Number of patients who completed treatment in October.....	3
Total number treated in October.....	14
Number of virus injections administered	194

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of November, 1912.

Four hundred and forty deaths were registered during the month, 24 less than in the preceding month. The annual death rate for October was 14.24 per thousand population. This month is 13.63.

The table here presented will show the rise and fall of the death rate for the Month of November, from the years 1906 to 1912.

The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1906	1907	1908	1909	1910	1911	1912
Total from all causes	571	516	519	533	522	594	540

External causes	48	38	41	56	42	55	53

BIRTHS

Births registered total 570 against 613 in October just closed and 513 in the corresponding month of 1911. The annual birth rate for November, 1911, was 12.96; in 1910 it was 14.40. This month it is 14.40.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-07.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of November since the year 1906:

	1906	1907	1908	1909	1910	1911	1912
Diphtheria	35	45	56	37	28	24	41
Scarlet fever	25	17	66	50	40	22	14
Measles	28	9	213	42	47	245	14
Mumps	*	*2	31	10	89	22	159
Whooping cough	8	*4	19	37	17	47	18
Chickenpox	10	5	63	55	50	77	96
Variola	—	7	16	4	—	1	12
Pneumonia	*	*	18	56	57	34	35
Tuberculosis (Pul.)	*	*	94	104	101	111	105
†Typhoid fever	214	41	30	28	25	37	20
‡Local origin	187	*	—	22	12	23	7

*Cases not reported.

Diphtheria shows a decrease of 11 cases over the month of October, just closed.

Scarlet fever	5 cases more
Variola	11 cases more
Measles	11 cases more
Whooping cough	8 cases less
Chickenpox	62 cases less
Typhoid fever	12 cases less

Typhoid fever cases still continue to show a steady decline, a falling off of 37 per cent being indicated as compared to October cases reported. The ratio of deaths to cases occurring is a fraction less than 1 per cent, thus showing that the mortality from this disease is practically nil.

Measles show 11 cases more than were reported in October but 3 cases being recorded during said month. Doubtless this disease is more prevalent than the figures would indicate, yet we must accept the record as evidence. It is fair to assume that numerous cases occur where a physician is not called in and the parent for various reasons fail to notify the Department of Health. With the method of inspection conducted by the School Medical Division, it is not possible for cases occurring in children attending school to escape notice. When a child is absent from any class-room for several days, the Inspectress of Schools makes a "home" visit to determine the cause, and in this way if any attempt is being made to cover up a case of illness it is promptly discovered.

A comparison with November, 1911, will prove of interest. During that month 231 cases of this disease were reported, this being one of the periods of an invasion of several months' duration, reaching the high-water mark in February, 1912, with 1126 cases, and then as suddenly subsiding.

The favorable showing of this month appears to bear out the statement that outbreaks of this complaint cannot be foreseen, and once an epidemic begins it is difficult to control and may reach large proportions.

In any event, this has been the experience of this department.

Variola shows 11 cases more than in October just closed. In the same month of 1911, but one case was recorded.

As stated in my October report, we may begin to expect at least a mild invasion of smallpox cases during the winter months. Compulsory vaccination would to a large degree tend to avert such an occurrence, but in the absence of this precaution, we can only take measures by prompt and proper isolation to prevent those afflicted from becoming a menace to others.

The minor infectious diseases peculiarly common to childhood, such as whooping cough, chickenpox, etc., seem to fluctuate up and down with considerable regularity, though the last-named disease shows a reduction of 65 per cent in the number of cases as compared to the preceding month.

CANINE RABIES

One death from this disease occurred during the month in the person of a woman, 37 years of age. The symptoms of this victim showed all the indications of rabies. An autopsy by the City Coroner revealed a slight injection of the meninges of the brain.

An examination by the Bacteriologist of this Department of a portion of the brain material revealed the presence of Negri bodies, proving the presence of rabies.

The history of this case was that of a bite inflicted by a stray Spitz dog about two months ago. No Pasteur treatment was administered as the case was not reported.

The number of positive animal cases during this month was five, according to the report of the Bacteriologist. This indicates a steady falling off, as 9 positive cases were recorded during the preceding month.

The following figures from the Bacteriologist are herewith submitted, these covering the present month:

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total
Dogs	4	3	2	9
Human	1	—	—	1
	5	3	2	10

Classified as follows:—Spaniels, 1; Fox Terriers, 2; Mongrels, 1; Human, 1.

PASTEUR TREATMENTS

Number of patients who began treatment in November	2
Number of patients who completed treatment in November	11
Total number treated in November	13
Number virus injections administered	135

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
Nov., 1911	760	618
Nov., 1912	588	521

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of December, 1912.

Six hundred and twenty-seven (627) deaths were registered during the month, 87 more than in the preceding month. The annual death rate for November was 13.63 per thousand population. This month it is 15.80.

The table here presented will show the rise and fall of the death rate for the month of December from the years 1906 to 1912.

The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1906	1907	1908	1909	1910	1911	1912
Total from all causes	601	636	528	570	527	691	627

External causes	62	67	56	49	40	54	63

BIRTHS

Births registered, total 581 against 570 in November just closed and 522 in the corresponding month of 1911. The annual birth rate for December 1911 was 13.71, in 1910 it was 13.47. This month it is 14.67.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-07:

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of December since the year 1906:

	1906	1907	1908	1909	1910	1911	1912
Diphtheria	35	58	51	51	32	27	49
Scarlet fever	18	8	61	50	43	46	15
Measles	12	13	24	55	74	476	8
Mumps	*	*1	45	*1	49	22	140
Whooping cough	5	*	6	33	15	20	4
Chickenpox	9	29	60	57	51	74	78
Variola	...	38	19	6	4	...	6
Pneumonia	*	*	29	45	40	82	67
Tuberculosis (Pul.)	*†	*	103	136	134	108	107
†Typhoid fever	127	37	35	24	45	18	27
†Local origin	107	*	*	15	28	13	13

*Cases not reported.

Diphtheria shows an increase of 8 cases over the month of November just closed.

Scarlet fever	1 case more
Variola	6 cases less
Measles	6 cases less
Whooping cough	14 cases less
Chickenpox	18 cases less
Typhoid fever	7 cases less

Measles cases show a decline as compared to November just closed.

In December of 1911 this disease showed 476 cases reported which is a wide difference as compared to this month with but eight cases to its credit. There does not appear to be any strong evidence that reports on cases are being withheld and while this complaint is generally considered as being more prevalent than is supposed, yet the figures as here given are taken from the official record and are given as such.

While measles shows up very favorably we are confronted with an outbreak of mumps, 140 cases of these being reported during the month, or 19 less than in November. In December 1911 but 22 cases were recorded, 49 in the corresponding month of 1910, being practically nil in the same month of 1909.

Of the 140 cases this month, 80 were discovered by school nurses and promptly excluded from further attendance pending recovery. Sanitary District No. 2, embracing the Western Addition, Richmond and Sunset districts, contributed the largest number of cases, 68. District No. 3, Mission and Ocean View comes next with 42 cases. District No. 1, North Beach and North of Market, developed 27 cases, and District No. 4, South of Market, Potrero, etc., had but three.

Smallpox (Variola) shows a decrease of 50 per cent in cases reported as compared to November. If we can continue this very favorable showing through the winter months it will be cause for congratulation, particularly as we cannot take any measures to protect ourselves through compulsory vaccination.

Diphtheria shows a slight rise over November cases reported. Out of 49 cases recorded during this month, but 2 deaths occurred, thus demonstrating the efficiency of the prompt use of anti-diphtheretic serum.

Under the heading of School Medical Inspection it will be noted that exclusions from school were made as follows: Diphtheria 9, Measles 4, Mumps (already mentioned) 80, Scarlet Fever 1, contacts 224.

This valuable aid towards reducing the danger of infection (by contact particularly) is a strong testimonial to the importance of this work. It is safe to say that without this assistance many more cases of communicable diseases common to children would develop, as the force of sanitary officers at our command would be totally inadequate to handle the situation as perfectly as the Division of School Medical Inspection.

CANINE RABIES

12 positive cases of this disease were reported by the Bacteriologist of this Department during the month.

This is an increase of seven cases over November and three more than in October.

As a precautionary measure the Ordinance requiring dogs to be kept in restraint or muzzled has been renewed to continue from January 1st, 1913. While there is no cause for undue alarm, it is deemed wise to take all necessary steps to protect the public and minimize as far as it may be possible the spread of this disease.

No human cases were recorded during the month.

The bacteriologist submits the following tables of work performed in connection with this invasion during December:

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total
Dogs	12	10		22
Cats		1		1
	12	11		23

Classification of Rabid Dogs:—Mongrels, 5; Spitz, 1; Pointers, 1; Collie, 1; Bull, 1; Boston Bull, 1; Bull Terrier, 1; Cocker Spaniel, 1.

PASTEUR TREATMENTS

Number of patients who began treatment in December	9
Number of patients who completed treatment in December	7
Total number treated in December.....	11
Number virus injections administered.....	219

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
December, 1911	587	490
December, 1912	565	444

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of January, 1913.

Six hundred and twenty-seven (627) deaths were registered during the month, 87 more than in the preceding month. The annual rate for December was 13.63 per thousand population. This month it is 15.80. The table here presented will show the rise and fall of the death rate for the month of January, from the year 1907 to 1913.

The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	625	629	553	601	615	649	752
Including deaths from—							
Tuberculosis	58	85	64	83	63	56	69

Scarlet fever	2		2		3		
Whooping cough	2		4	1	4	1	
Diseases early infancy	18	17	30	22	12	19	19
Old age	13	18	10	14	7	3	6
External causes	50	53	46	68	57	61	71

BIRTHS

Births registered total 592, against 581 in December just closed and 600 in the corresponding month of 1912. The annual birth rate for January 1912 was 15.15, in 1911 it was 13.08. This month it is 14.95.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-07.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of January since the year 1907:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	28	59	53	55	40	29	39
Scarlet fever	30	17	47	59	79	46	18
Measles	199	21	272	81	57	1,028	13
Mumps	*	3	42	2	55	38	249
Whooping cough	*6	2	37	58	16	41	45
Chickenpox	4	45	70	65	52	74	141
Variola		38	4	4	6		7
Pneumonia	*	49	32	78	50	90	74
Tuberculosis (Pul.)	*	83	121	170	124	131	107
†Typhoid fever	44	21	13	17	20	15	24
†Local origin	*	*			9	11	7

*Cases not reported.

Diphtheria shows a decrease of 10 cases over the month of December just closed.

Scarlet fever	3 cases more
Variola	1 case more
Measles	5 cases more
Whooping cough	41 cases more
Chickenpox	63 cases more
Typhoid fever	3 cases more

In January 1912 measles showed 1028 cases reported. This month shows but 13 cases, although mumps figures make up the apparent deficiency, there being 249 cases of this disease recorded during the month as against 140 in December, or an increase of 109 over the month previous.

Of the 249 cases mentioned herein, 167 or 66 per cent of the total number were discovered in the schools under inspection by school nurses and exclusion promptly followed. Owing to an insufficient corps of nurses it is not possible to properly cover all the schools operating in the city and without doubt many "contacts" are spreading the disease despite efforts to check it.

The Mission and Ocean View districts which are practically without school inspection give 144 of the cases reported. Western addition, Richmond, and Sunset contribute 62 cases, North Beach district 35 cases, while south of Market street produced but 8.

The foregoing figures are given merely to illustrate the fact that the districts showing the fewest number of cases are well covered by inspection of school children and we attribute the mildness of the invasion in these localities to this feature of our work.

Smallpox (Variola) gives 7 cases this month as against 6 during December. This is considered a fortunate showing, particularly in view of the fact that numerous cases have occurred in adjacent counties, and without a compulsory vaccination law to protect us, we have to take our chances on invasion.

SCHOOL MEDICAL INSPECTION.

Besides the 167 cases of mumps herein already mentioned the Health Inspectresses made other exclusions as follows:

Chicken pox 88, diphtheria 2, Scarlet fever 2, measles 2, whooping cough 9, tonsilitis 5, "contacts" 280.

Of the 85 schools in the city but 66 are under inspection. Formerly 14 inspectresses were employed but owing to a lack of funds this number has been reduced to 11. The withdrawal of inspection from a number of schools necessarily affected by this change drew forth vigorous protests from both Principals of Schools and the mothers of children attending. They wanted this work to continue as they had experienced the good results obtained. This strong tribute to the efficiency of school medical inspection is indicative of the fact that it has been more than a success, for like most all movements for the general good, it at first met with strong opposition from those who are now its ardent proponents.

It is to be hoped that the scope of this work will be considerably enlarged at the opening of the next fiscal year (July) by the appointment of additional school nurses.

The enrollment of the 66 schools covered, totalled 33,587 pupils—439 visits to schools and 708 "home" visits were made, and 4,734 children were personally examined by the nurses.

A detailed report of the work of this division appears on page 16.

CONDEMNATION OF INSANITARY BUILDINGS.

Not the least important feature of Health Department work is the improvement of sanitary conditions by the rehabilitation or elimination of insanitary buildings and premises. During this month 18 new cases for condemnation proceedings were brought before the Board of Health. Including cases from previous months, 22 condemnations were effected. This brought about 15 "abatement of nuisances"—3 by repair, 12 by demolition. These figures however, hardly give full value for the work really done, as the 12 "demolitions" show that 32 insanitary refugee shacks and two other structures were torn down as the result of such action.

CANINE RABIES

Nine positive cases of this disease were reported by the Bacteriologist during the month, 3 less than in December. No human cases developed during this period.

The following figures are taken from the report of the Bacteriologist for this month:

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total
Dogs	9	6	1	16

Classification of Rabid Dogs:—Cocker spaniel 2, spaniel 1, Gordon setter 1, Fox terrier 1, Mongrel 4.

PASTEUR TREATMENTS

Number of patients who began treatment in January	6
Number of patients who completed treatment in January	7
Total number treated in January	10
Number virus injections administered	140

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
January, 1911	467	387
January, 1912	587	415

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of February, 1913.

Five hundred and sixty-five (565) deaths were registered during the month, 187 less than in the preceding month. The annual death rate for January was 18.99 per thousand population. This month it is 14.26.

The table here presented will show the rise and fall of the death rate for the month of February from the year 1907 to 1913.

The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	554	552	531	502	505	615	565

External causes	48	57	51	53	48	53	52

BIRTHS

Births registered, total 607 against 592 in January just closed and 552 in the corresponding month of 1912. The annual birth rate for February, 1912 was 13.94, in 1911 it was 12.34. This month it is 15.32.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-7.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of February since the year 1907.

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	37	89	54	79	25	22	42
Scarlet fever	32	24	25	60	47	25	36
Measles	272	63	348	96	92	1,160	35
Mumps	*	5	75	7	49	41	459
Whooping cough	15	3	20	28	27	46	21
Chickenpox	25	20	61	65	67	65	267
Variola	—	22	8	10	—	—	3
Pneumonia	*	*	23	47	35	65	68
Tuberculosis (Pul.)	*	*	112	124	—	100	118
†Typhoid fever	25	6	6	17	10	16	22
‡Local origin	—	*	*	*	14	7	6
*Cases not reported.	—	*	*	*	14	7	6
†Cases not reported.	—	*	*	*	14	7	6
‡Cases not reported.	—	*	*	*	14	7	6

Diphtheria shows an increase of 3 cases over the month of January just closed.

Scarlet fever	18 cases more
Variola	4 cases less
Measles	22 cases more
Whooping cough	24 cases less
Chickenpox	126 cases more
Typhoid fever	2 cases less

Mumps cases show a decided increase over the number reported in January when 249 cases were recorded. This month totals up with 459, an increase of about fifty per cent.

Of this number (459) three hundred were reported by School Nurses, or 75% of the total cases were discovered through the medium of school inspection.

In my January report I pointed out that the largest number of cases of this disease were reported from the districts of the city where school inspection work has been curtailed or where same does not apply owing to our limited working force. This same remark applies for this month as 338 cases came out of sanitary district No. 3, embracing the Mission and Ocean View territory, which is practically without inspection.

District No. 1, which includes North Beach, north of Market street and east of Van Ness avenue, contributed 83 cases. This district is well covered by school inspection.

Districts 2 and 4, the former including the Western Addition, Richmond and Sunset, and the latter covering south of Market and the Potrero had 19 cases each to their credit, and these districts are also covered by inspection.

The comparatively few cases reported for the "covered" districts is no doubt accounted for by reason of the fact that exclusions from school promptly follow where cases are found to exist; where such exclusion does not obtain it is to be expected that dissemination of the disease naturally follows.

In this connection it is also to be noted that of the 267 cases of chickenpox reported, 131 or 50 per cent were discovered by the school nurses; 8 cases of diphtheria, 13 of measles, 7 of scarlatina and 9 of whooping cough were also found and exclusion promptly followed in all cases.

The report of "School Medical Inspection" appearing on page 16 is worthy of special reference.

CONDEMNATION OF INSANITARY BUILDINGS.

Following up my mention in the January Bulletin of the work performed by this Department under the foregoing caption, I submit for perusal the following figures taken from the report of the Public Health service for the month ending February 28th, 1913. As the Federal Service acts in conjunction with this department on the work of condemnation of insanitary premises, these figures should prove of interest:

Date of last case of human plague.....	Jan. 30, 1908
Date of last case of rodent plague.....	Oct. 23, 1908
No. of premises inspected.....	4,519
No. of premises destroyed—by owners.....	50
No. of nuisances abated.....	596
No. of poisons placed.....	191,800
No. rats found dead.....	143
No. of rats trapped.....	4,753
No. of rats identified.....	6,054
Mus norvegicus 3,102; Mus alexandrinus, 777; Mus rattus, 1,016; Mus musculus, 1,159.	
No. of rats examined bacteriologically.....	4,593
No. of rats taken dead from steamers, after fumigation. Not included in the above,—	
Kenyon Maru—Alexandrinus, 2.	Tenyo Maru—Alexandrinus 24, Musculus 3.

The records of this department show that during this month as the result of condemnation proceedings 45 insanitary structures were demolished, 33 of these being refugee shacks, 3 stables and 9 other buildings.

CANINE RABIES.

21 positive cases of this disease in dogs and 1 case in a human being is the record for the month of February. In January but nine positive animal cases were noted; at this time last year cases of this disease manifested the same tendency to increase in number, no positive cases appearing between October, 1911 and February, 1912, but in the latter month cases multiplied rapidly. It is to be sincerely hoped that history will not repeat itself to such a marked degree at this particular time, but the fact remains that this complaint is far from being entirely stamped out. One death of a child 7 years of age from this is the toll for the month. The history shows that the victim was bitten on the eyelid by a pet dog, which subsequently developed signs of rabies and suddenly disappeared before observations of its condition could be taken. The child was taken ill and died rather suddenly with characteristic symptoms of the disease, the cause of death being conclusively proven by post-mortem examination at the hands of the City Coroner. Bacteriological examination revealed the presence of Negri bodies in the brain tissue.

The Coroners jury sitting on this case recommended the strict enforcement of the provisions of the "dog muzzling" ordinance relative to the summary destruction of all dogs roaming at large in violation of such law. This recommendation has been endorsed by the Department of Public Health.

The following figures are taken from the report of the Bacteriologist of this department covering the month of February.

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total
Dogs	21	15	1	37
Human	1		1	2
	22	15	2	39

Dogs classified as follows:—Spaniels, 1; Fox terriers, 2; mongrels, 8; bull, 3; poodle, 2; Spitz, 2; Newfoundland, 1; Setter, 1; Chow, 1.

PASTEUR TREATMENTS

Number of patients who began treatment in February	18
Number of patients who completed treatment in February	13
Total number treated in February	21
Number of virus injections administered.....	376

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
February, 1912.....	1,045	799
February, 1913.....	613	439

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of March, 1913.

Six hundred and sixty-four (664) deaths were registered during the month, 99 more than in the preceding month. The annual death rate for February was 14.26 per thousand population. This month it is 16.76

The table here presented will show the rise and fall of the death rate for the month of March from the year 1907 to 1913. The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	591	613	579	583	571	651	664
Including deaths from—

Whooping cough	4	...	2	4	3	4	2
Diseases early infancy	24	22	14	20	16	17	19
Old age	17	7	12	12	7	10	7
External causes	49	60	50	47	54	54	69

BIRTHS

Births registered total 569, against 607 in February just closed and 577 in the corresponding month of 1912. The annual birth rate for March 1912 was 14.56, in 1911 it was 14.72. This month it is 14.36.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-7.

CONTAGIOUS DISEASES REPORTED

The following table will show the number of cases of principal contagious diseases reported during the month of March since the year 1907.

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	33	68	65	55	23	26	38
Scarlet fever	20	52	66	41	88	20	28
Measles	207	121	368	230	149	836	37
Mumps	*	14	111	8	12	36	597
Whooping cough	20	3	37	41	77	54	25
Chickenpox	7	28	28	148	119	62	161
Variola	4	55	3	8	...	1	2
Pneumonia	*	*	51	47	47	40	58
Tuberculosis (Pul.)	*	*	186	161	117	150	110
†Typhoid fever	11	12	21	25	11	12	15
†Local origin	*	*	...	22	4	9	8

*Cases not reported.

Diphtheria shows a decrease of 4 cases over the month of February just closed.

Scarlet fever	8 cases less
Variola	1 case more
Measles	2 cases more
Whooping cough	4 cases more
Chickenpox	101 cases less
Typhoid fever	7 cases less

Mumps continue to show an increase as compared to previous month, 138 cases more being reported than in February just closed, or a gain of 30%.

Sanitary district No. 2 (Western Addition, Richmond & Sunset) contributed the largest number of these cases (258). This section is covered by School Inspection.

District No. 3 (Mission and Ocean View to the County Line) comes next with 232 cases to its credit. This part of the city is without School Inspection.

District No. 1 (North of Market Street, East of Van Ness—including North Beach and Chinese Quarter) had 85 cases within its confines, while District No. 4 (South of Market Street, including Potrero) showed 22 cases. Both of these districts are well covered by School Inspection.

SCHOOL MEDICAL INSPECTION

Of the total number of mumps cases reported for March (597) the School nurses discovered 393 or slightly over 65 per cent of the total.

In addition to the showing made on "Exclusions" for mumps they also located 100 cases of Chickenpox out of a total of 161 reported during the month. 4 cases of diphtheria, 5 of scarlatina, 18 of measles, 24 of whooping cough, 11 of tonsilitis and contagious skin diseases 6.

"Contacts" to number of 615 were also excluded. 71 out of 85 schools were covered by inspection during the month with a total enrollment of 35,811 children.

Five thousand one hundred and fifty-nine (5,159) pupils were examined by nurses, 322 school visits were made, and 979 "home" visits were covered.

Five hundred and seventy children were examined by Inspectors.

The detailed report of this division appearing on page 16 is worthy of perusal.

CANINE RABIES.

Twenty-three cases of this disease were recorded during the month of March, nineteen of these occurred in dogs and four in cats.

No human cases developed during the month. At the same period during last year two cases of human rabies, 63 of canine and 1 of feline were recorded, so the comparison appears to be favorable as showing a decline in the invasion, yet the fact that 14 persons began the Pasteur treatment during the present month is an indication that the disease is not entirely stamped out. The following table shows the Pasteur treatments administered:

Number of patients who began treatment in March	14
Number of patients who completed treatment in March	13
Total number treated during March	22
Total number completed treatment to date	162

RABIES EXAMINATIONS

Animals	Positive	Negative	Doubtful	Total

Monthly Birth Rate per 1,000 of Population.....13.53 Annual Rate 16.23

Marriage Licenses issued (by County Clerk)..... 483

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of April, 1913.

Six hundred and twelve (612) deaths were registered during the month—52 less than in the preceding month. The annual death rate for March was 16.76 per thousand population. This month it is 15.45.

The table here presented will show the rise and fall of the death rate for the month of April from the year 1907 to 1913. The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	561	473	513	538	502	553	612

	15.84	13.34	12.96	13.56	12.67	13.96	15.45

BIRTHS

Births registered total 643 against 569 in the preceding month and 608 in the month of April, 1912. The annual birth rate for April, 1912 was 15.36, in 1911 it was 13.08. This month it is 16.23.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-7.

COMMUNICABLE DISEASES REPORTED

The following table will show the number of cases of principal communicable diseases reported during the month of April since the year 1907.

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	31	82	69	60	22	20	31
Scarlet fever	17	33	51	36	73	29	42
Measles	130	167	204	199	166	250	95
Mumps	*3	14	60	18	113	55	498
Whooping cough	26	4	50	31	58	24	49
Chickenpox	12	29	42	72	79	34	136
Variola	2	38	1	5	—	5	5
Pneumonia	*	*	42	43	24	57	55
Tuberculosis (Pul.)	*	57	157	144	81	99	141
†Typhoid fever	15	9	11	16	23	6	12
†Local origin	*	*	*	10	8	5	5

*Cases not reported.

Diphtheria shows 7 cases less than in March.

Scarlet fever	14 cases more
Variola	3 cases more
Measles	58 cases more
Whooping cough	24 cases more
Chickenpox	25 cases less
Mumps	99 cases less

As it will be noted the cases of mumps show a sharp decline as compared to the month of March. In January of this year 249 cases were reported, in February 459, in March 597 and this month the figures drop to 498 cases.

All of the other diseases in this class, with the exception of chickenpox show an increase over the preceding month.

SCHOOL MEDICAL INSPECTION

Of the 478 cases of mumps reported under the preceding heading, 359 or seventy-two per cent of the total were discovered by the School nurses.

One hundred and twenty-five (125) cases of chickenpox located out of an aggregate of 136 reported for the month must be credited to the work of this division also.

In all, 1357 pupils were excluded from attendance at school during the month—12 found with scarlet fever, 1 with diphtheria, 7 with tonsilitis, 38 with whooping cough, 9 with contagious skin diseases, in addition to the mumps and chickenpox cases already mentioned.

Besides these, there were 763 "contacts," under the "exclusion" list. 70 out of the 85 schools now operating are covered by inspection with an enrollment of 34,836 pupils.

See page 16 for a detailed report on the work of this division.

CONDEMNATION OF INSANITARY STRUCTURES

One hundred and thirty four insanitary buildings, condemned by this Board, were demolished during the month. This number included 124 refugee shacks, 2 stables and 8 other buildings. Twenty-four new cases were brought up for hearing in condemnation proceedings and 23 "re-hearings" were acted upon.

In this connection I quote from the report of the U. S. Public Health Service the following data covering the month ending April 30th, 1913:

Date of last cases of human plague.....	January 30, 1908
Date of last case of rodent plague	October 23, 1908
No. of premises inspected	6,335
No. of premises destroyed (by owners).....	103
No. of nuisances abated	984
No. of poisons placed	101,000
No. of rats found dead	75
No. of rats trapped	6,182
No. of rats identified	7,646
Mus norvegicus 4632; Mus. alexandrinus 714 Mus rattus 901; Mus musculus 1389	
No. of rats examined bacteriologically	5,399 neg.
Rats taken dead from steamers after fumigation (not included above)	
Lyra.....	Rattus 5, Alexandrinus 162
Chiyo Maru.....	Alexandrinus 38
Manchuria	Musculus 66
Sierra	Musculus 38
Trapped on steamer Lyra after fumigation Alexandrus	4

CANINE RABIES.

Eleven positive cases in dogs, one feline and one case in a horse, is the record of this disease for April.

No human cases were recorded during this period. Twenty-three examinations in all were made by the Bacteriologist of the Department, seven proving "negative", one was doubtful and two remained unfinished.

While the number of cases appear to be slowly diminishing, yet it would seem as if the disease is still prevalent and the observance of preventive measures should be seriously considered, until the last vestige of the disease has been stamped out.

The dogs examined were classified by breed as follows: Bull, 1; Fox Terrier, 3; Mastiff, 1; Spaniel, 1; Mongrel, 5.

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
April, 1912	1,133	869
April, 1913	600	409

This shows a very marked difference between the two periods and the reason for this falling off is now being investigated with a view to ascertaining if the dog population is diminishing, or if the enforcement of the "Muzzling" ordinance has any particular bearing on the situation.

I quote from the report of the Bacteriologist of the Department for April the following:

PASTEUR TREATMENTS

Patients commencing treatment in April	4
Patients completed treatments in April	9
Total	13
Total number completed treatment to date	175

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of May, 1913.

Five hundred and forty-eight (548) deaths were registered during the month, 64 less than in the preceding month. The annual death rate for April was 15.45 per thousand population. This month it is 13.83.

The table here presented will show the rise and fall of the death rate for the month of May from the year 1907 to 1913. The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	519	542	535	534	555	537	548
Including deaths from—

External causes	58	61	52	44	43	51	54
	Est. pop. 425,000			Est. pop. 475,000			
Annual rate per 1,000 population	14.65	15.30	15.09	13.48	14.01	13.56	13.83

BIRTHS

Births registered total 582, against 643 in April just closed, and 560 in the corresponding month of 1912. The annual birth rate for May, 1912, was 14.03, in 1911 it was 15.84. This month it is 14.70.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-7.

COMMUNICABLE DISEASES REPORTED

The following table will show the number of cases of principal communicable diseases reported during the month of May, since the year 1907:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	29	59	66	43	23	15	21
Scarlet fever	15	29	50	50	67	16	42
Measles	141	191	192	171	280	91	109
Mumps	*	5	59	23	69	18	330
Whooping cough	24	5	70	61	59	34	51
Chickenpox	8	28	29	44	68	59	119
Variola	6	29	7	2	1	4	6
Pneumonia	*	*	40	59	28	32	39
Tuberculosis (Pul.)	*	92	110	122	102	98	101
†Typhoid fever	42	12	15	26	14	14	26
†Local origin	37	*	*	21	8	6	11
*Cases not reported.				§7 cases from Presidio Reservation.			

Diphtheria shows a decrease of 10 cases over the month of April just closed.

Scarlet fever	Same number cases
Variola	1 case more
Measles	14 cases more
Whooping cough	2 cases less
Chickenpox	17 cases less
Typhoid Fever	14 cases more

Mumps show a marked decrease as compared to previous month, there being 168 cases less reported than in April, a falling off by 35 per cent.

Sanitary District No. 2 (Western Addition, Richmond and Sunset) had the largest number of cases (160). This section is covered by School Inspection.

District No. 3 (Mission and Ocean View to the County Line) is next with 102 charged against it. This part of the city is without School Inspection.

District No. 1 (North of Market Street, East of Van Ness—including North Beach and Chinese Quarter) contributed 37 cases, while District No. 4 (south of Market Street, including Potrero) showed 31 cases. Both of these districts are well covered by School Inspection.

SCHOOL MEDICAL INSPECTION

226 of the 330 cases of mumps shown under the table of communicable diseases were reported by the School Nurses, or 69 per cent of the total.

Of 119 cases of chickenpox reported 73 should be credited to the same corps, or 61 per cent.

In addition to this, 39 cases of measles, 19 of whooping cough, 4 of scarlatina and 1 of diphtheria were discovered and prompt exclusion followed in all cases.

Besides these above enumerated 426 "contacts" were sent home; the total number of exclusions for all causes aggregating 795 or 562 less than in the month of April.

71 out of 85 schools were covered by inspection during the month with a total enrollment of 33,536 pupils. 8,185 pupils were examined by nurses and 938 by the Medical Inspectors. 738 "home" visits were made by Nurses.

On page 16 will be found a detailed report of the work of this division.

CONDEMNATION OF INSANITARY STRUCTURES

Through condemnation proceedings 26 insanitary buildings were demolished during this month, consisting of 6 refugee shacks, 1 stable and 19 other structures; 16 new cases were presented to the Board for hearing and 18 "abatements" were recorded, including cases pending from previous months.

The report of the U. S. Public Health Service for the month ending May 31st, 1913, is here submitted as being of interest in connection with this part of my report:

Date of last cases of human plague.....	January 30, 1908
Date of last case of rodent plague	October 23, 1908
No. of premises inspected	7,059
No. of premises destroyed (by owners).....	181
No. of nuisances abated	1,128
No. of poisons placed	77,800
No. of rats found dead	93
No. of rats trapped	6,417
No. of rats identified	7,868
Mus norvegicus 4,987; Mus rattus 861; Mus alexandrinus 681; Mus musculus 1,339.	
No. of rats examined bacteriologically	5,290 neg.
1 Mole; 1 Gopher.	
Rats taken dead from steamers after fumigation (not included above)	
Persia	Rattus, 11, Alexandrinus 4
Serapis	Musculus 11
Shinyo Maru	Rattus 1, Alexandrinus 10
Enterprise	Musculus 1

CANINE RABIES.

2 positive cases in humans and 5 in dogs is the record of this malady for the month of May.

Of the human cases, one occurred in the person of a man 23 years of age with a history of a dog bite on the hand two months previous to his death. The bite was not reported to the Health Department and Pasteur treatment was not administered. The victim died on May 22nd showing all characteristic symptoms of rabies.

The second case was that of a girl 4 years of age, bitten on the cheek by a dog, the wound being cauterized immediately and Pasteur treatment inaugurated the following day. On May 26th, some days after treatment had been continued, and before complete immunity could be established, the child died after indicating all the signs of rabies.

The cause of death in each of these cases was given as rabies after autopsy by the City Coroner, examination of the brain tissue by the Bacteriologist of this department and animal inoculation.

In the rendering of their verdict in each of these cases the Coroner's jury recommended a strict enforcement of the "dog muzzling" ordinance and the Chief of Police has given his assurance that said recommendation will be carried into effect by his department.

While the number of "positive" cases of this disease in dogs is smaller than in April (or 6 less) it would appear from the human cases herein quoted, that all danger from this complaint has not been removed.

The report of the Bacteriologist of this Department shows that 12 rabies examinations were made during the month, 7 proving positive, 4 negative and 1 doubtful.

Dogs found rabid were classified by breed as follows: Fox terrier 1, Spaniel 1, St. Bernard 1, Mongrel 2.

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
May, 1912	870	573
May, 1913	672	345

PASTEUR TREATMENTS

4 patients began treatment in May, and 6 completed treatment. Total treated during the month, 8, and 179 completed treatment to May 31st.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of June, 1913.

Five hundred and thirty-eight (538) deaths were registered during the month, 10 less than in the preceding month. The annual death rate for May was 13.83 per thousand population. This month it is 13.58.

The table here presented will show the rise and fall of the death rate for the month of June from the year 1907 to 1913. The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	503	481	476	442	503	521	538
Including deaths from—

Annual rate per 1,000 population	14.19	13.57	12.02	11.16	12.69	13.15	13.58

BIRTHS

Births registered total 653 against 582 in the preceding month and 657 in the month of June, 1912. The annual birth rate for June, 1912, was 16.59, in 1911 it was 15.20. This month it is 16.48.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-7.

COMMUNICABLE DISEASES REPORTED

The following table will show the number of cases of principal communicable diseases reported during the month of June, since the year 1907.

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	24	57	38	33	12	21	28
Scarlet fever	13	23	42	33	67	6	28
Measles	105	188	108	106	171	34	41
Mumps	*	10	25	12	13	21	†64
Whooping cough	14	7	23	38	19	37	15
Chickenpox	12	33	29	7	23	50	24
Variola	3	28	1	1	1	29	3
Pneumonia	*	18	37	32	52	19	37
Tuberculosis (Pul.)	*	50	88	107	72	122	77
†Typhoid fever	22	35	28	29	16	13	24
†Local origin	*	*	*	14	8	8	15
*Cases not reported.				†3 from Presidio.			

Diphtheria shows	7 cases more than in May
Scarlet Fever	14 cases less
Variola	3 cases less
Measles	68 cases less
Whooping Cough	36 cases less
Chicken Pox	95 cases less
Mumps	266 cases less

It will be noted that the mumps cases as compared to the preceding month, show a large falling off, a steady decline in the number of cases of this disease being apparent during the past four months.

With the exception of Diphtheria, all the communicable diseases, especially those common to childhood, show fewer cases than in May just closed. June is the "vacation" month in all the schools, hence this favorable showing may be attributed to the scattering of the children during this period, eliminating to a large extent the danger of contact with its attendant results.

SCHOOL MEDICAL INSPECTION

Notwithstanding the fact that all of the schools covered by this Bureau closed early in the month for annual vacation yet the record of the visits made etc., (see page 16) shows that considerable work was accomplished, 1212 pupils having been examined by the nurses, and 310 "home" visits covered. 53 "exclusions" were made, 6 for chicken pox, 18 for mumps, 1 for scarlet fever, 5 for whooping cough, 1 for tonsilitis, and 22 contacts making the total.

At the opening of June 35,127 were enrolled in the schools covered by inspection.

18 out of the 64 cases of mumps reported under the heading of "communicable diseases" were discovered by the school nurses.

5 of the 15 whooping cough cases reported are credited to this division.

6 out of 24 cases of chicken pox were also discovered by the nurses.

CONDEMNATION OF INSANITARY STRUCTURES

Twenty (20) insanitary structures were destroyed during this month, as the result of condemnation proceedings by the Board of Health, thus ridding the community of that many rat harbors with their disease breeding surroundings. Among these were 14 nondescript structures and dwellings, 3 refugee shacks and 3 stables. 18 "new" cases were presented for hearing, 30 old cases were brought up for "re-hearing" and 30 cases were "abated," 8 by repair, 2 by vacation and 20 by demolition.

The following is a detailed report of anti-plague operations of the United States Public Health Service in San Francisco, California, for the month ended June 30, 1913:

Date of last cases of human plague.....	January 30, 1908
Date of last case of rodent plague	October 23, 1908
No. of premises inspected	6,510
No. of premises destroyed (by owners).....	125
No. of nuisances abated	842
No. of poisons placed	132,000
No. of rats found dead	83
No. of rats trapped	6,754
No. of rats identified	8,079
Mus norvegicus, 5,238; Mus alexandrinus, 624; Mus rattus, 972; Mus musculus, 1,245.	
No. of rats examined bacteriologically	5,439
2 gophers, 1 mole.	
Rats taken dead from steamers after fumigation (not included above)	
China	Alexandrinus 2
Honolulu	Rattus, 1; Alexandrinus, 17; Musculus 2
Shinyo Maru	Rattus, 9; Alexandrinus 33
Harpalyce	Rattus, 6; Alexandrinus 19
Trapped on Shinyo Maru after fumigation.....	Rattus, 1; Alexandrinus 5
Topeka (dead)	3

CANINE RABIES

It is with pleasure that we are able to announce that no cases of human rabies developed during the month of June.

3 "positive" cases in animals were reported by the Bacteriologist of this department, 2 of these being in dogs and 1 in a goat. 8 suspects were examined during the month, three proving positive, three negative, one doubtful and one is yet unfinished.

The "dog muzzling" ordinance which had been in effect since March, 1912, expired by limitation on June 30, 1913. An effort was made to have same continued in force for a longer period, but the Board of Supervisors in their wisdom decided that this action did not appear to be necessary.

The records of the bacteriologist of this Department covering the month of June show the following data:

PASTEUR TREATMENTS

4 patients began treatment in this month, 2 completed treatment, a total of 6 for the period.

69 Virus injections were administered and to June 30th one hundred and seventy-nine persons had completed treatment.

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Destroyed
June, 1912	839	494
June, 1913	883	382

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of July, 1913.

Five hundred and twenty-one (521) deaths were registered during the month, 17 less than in the preceding month. The annual death rate for June was 13.58 per thousand population. This month it is 13.15.

The table here presented will show the rise and fall of the death rate for the month of July from the year 1907 to 1913. The number of deaths from principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	532	486	462	533	427	533	521

Annual rate per 1,000 population	14.70	13.71	11.66	13.46	10.77	13.46	13.15

BIRTHS

Births registered total 641, against 653 in June just closed and 602 in the corresponding month of 1912. The annual birth rate for July, 1912 was 15.10, in 1911 it was 16.46. This month it is 16.18.

The comparative table of births appearing on Page 8 will show the rise and fall of the birth rate by months since 1907-8.

COMMUNICABLE DISEASES REPORTED

The following table will show the number of cases of principal communicable diseases reported during the month of July since the year 1907:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	38	35	20	27	14	28	19
Scarlet fever	10	6	23	17	28	2	7
Measles	60	37	14	37	46	12	17
Mumps		2	3	4	9	12	14
Whooping cough	18	5	27	59	27	7	16
Chickenpox	10	10	4	6	14	22	12
Variola	11	12		1	1	16	3
Pneumonia		24	30	42	27	20	22
Tuberculosis (Pul.)		74	108	115	61	77	100
†Typhoid fever	42	21	35	15	13	105	45
†Local origin	36	*	*	4	8	87	21

*Cases not reported.

Diphtheria shows	9 cases less than were reported in mo. of June.
Scarlet fever	7 cases less
Variola	same number of cases
Measles	24 cases more
Whooping cough	1 case more
Chickenpox	12 cases less
Typhoid fever	21 cases more

Mumps show 50 cases less than in previous month, the number of cases of this disease rapidly declining for the past two months, indicating that the recent invasion has run its course.

SCHOOL HEALTH INSPECTION

All the public schools were closed during this month owing to regular annual vacation, yet considerable work was accomplished through the medium of "Home Inspections."

1 case of scarlet fever, 1 of diphtheria, 6 of chickenpox, 7 of mumps, 22 of whooping cough, 6 of contagious skin diseases and 52 contacts were discovered, 95 cases in all, and notices of exclusion from school were served in each case.

3,095 children were examined during the month by nurses and 188 home visits were made.

A detailed tabulated report of the work done in this division appears on page 16.

CONDEMNATION OF INSANITARY STRUCTURES

18 refugee shacks, 4 stables and 9 nondescript structures were demolished during the month as the result of action by the Board of Health. Eleven "new" cases were brought up for condemnation proceedings and "re-hearings" were held in numerous old cases. Many of these matters come before the Board of Health several times before being finally disposed of, and the routine work thus imposed reaches large proportions. 25 "cases" were cleared from the calendar during the month, 5 by "repair," 2 by "vacation" and 18 by "demolition."

The report of the surgeon in charge of Field Operations, U. S. Public Health Service, working jointly with this Department is herewith reproduced as covering the month of July, 1913:

Date of last cases of human plague.....	January 30, 1908
Date of last case of rat plague	October 23, 1908
No. of premises inspected	5,685
No. of premises destroyed (by owners).....	59
No. of nuisances abated	814
No. of poisons placed	81,900
No. of rats found dead	74
No. of rats trapped	7,070
No. of rats identified	8,235
Mus norvegicus, 5,375; mus alexandrinus, 615; mus rattus, 1,153; mus musculus, 1,092.	
No. of rats examined bacteriologically	5,581 neg.
Rats taken dead from steamers after fumigation (not included above)	
Tenyo Maru	Rattus, 0; Alexandrinus 79
Iaqua	Rattus, 7; Alexandrinus 8
Aztec	Rattus, 5; Alexandrinus 2
City of Sydney	Rattus, 7; Alexandrinus 14
City of Para	Rattus, 47; Alexandrinus 40
San Jose	Rattus, 2; Alexandrinus 22
Schooner Annie Johnson	Musculus 27
Trapped on steamers, not included above	
Aztec	Alexandrinus 1
Niles	Rattus, 1; Alexandrinus 1
City of Para	Rattus, 1

CANINE RABIES

No human cases of this disease were recorded during the month.

Four "positive" cases in dogs were reported by the bacteriologist, out of four examinations made, and this statement has a favorable look when compared to conditions as they existed a year previous when 20 "positive" cases in dogs were recorded, and two deaths from rabies in humans occurred.

Notwithstanding this showing the Department is exercising strict vigilance where cases of dog bite are reported and urges upon every person suffering from such bites to submit to Pasteur treatment where any doubt whatever exists as to the condition of the dog inflicting the wound.

The infected dogs found during the month were classified by breed as follows: Bull terrier 1, fox terrier 2, mongrel 1.

The following statement will show Pasteur treatments administered: 3 persons began treatment in July, 5 completed treatments and 110 virus injections were administered. 186 persons have submitted to this treatment since February, 1912, to date.

DOG CATCH

The records of the public pound show the following:

	Dogs Impounded	Destroyed
July, 1912	618	502
July, 1913	772	521

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of August, 1913.

Four hundred and ninety-eight (498) deaths were registered during the month, 23 less than in the preceding month. The annual death rate for July was 13.15 per thousand population. This month it is 12.57.

The table here presented will show the rise and fall of the death rate for the month of August, from the year 1907 to 1913. The number of deaths from some of the principal causes during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes:.....	490	488	450	499	469	498	498

Annual rate per 1,000 population.....	13.80	12.57	11.36	12.60	11.84	12.57	12.57

BIRTHS

Births registered total 733, against 641 in July just closed and 589 in the corresponding month of 1912. The annual birth rate for August, 1912, was 14.88, in 1911 it was 15.18. This month it is 18.51.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1907-8.

COMMUNICABLE DISEASES REPORTED

The following table will show the number of cases of principal communicable diseases reported during the month of August since the year 1907:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	36	30	27	32	16	19	14
Scarlet fever	3	11	22	27	13	3	21
Measles	55	32	11	34	58	12	16
Mumps	1	4	26	3	17	11	38
Whooping cough	5	17	11	44	16	12	38
Chickenpox	3	13	2	18	28	7	18
Variola	9	16		1	2	18	
Pneumonia		10	32	52	22	27	17
Tuberculosis (Pul.)		91	90	114	77	89	101
†Typhoid fever	32	24	38	42	14	53	27
†Local origin	36	*	*	7	7	26	15

* Cases not reported.

Diphtheria shows a decrease of 5 cases as compared to July just closed.
 Scarlet fever 15 cases more
 Variola 3 cases less
 Measles 1 case less
 Whooping cough 22 cases more
 Chickenpox 6 cases more
 Typhoid fever 18 cases less

Mumps show an increase over the previous month, there being 24 cases more reported than in July, which had 14 charged to it. This, however, is a normal showing and compares very favorably with the figures for June, which showed 64 cases, while May had 330 to its credit.

SCHOOL HEALTH INSPECTION

This division was augmented on August 1st by the appointment of four additional nurses, thus enabling the department to cover 82 out of the 85 schools operating in the city, with a total enrollment of 37,446 pupils. There were but two school weeks during this month, the scholars assembling during the second week, after the midsummer vacation.

9,500 pupils were examined by nurses and 334 "home visits" were made.

Exclusions from school on account of communicable diseases were made as follows: Diphtheria, 2; scarlatina, 10; chickenpox, 15; whooping cough, 14; mumps, 24; contagious skin diseases, 29; "contacts," 113.

A detailed report showing the work of this division appears on page 16.

CONDEMNATION OF INSANITARY STRUCTURES

Owing to the Board of Health being on its annual vacation no action was taken during this month on complaints against insanitary structures requiring to be heard before the Board. Under this heading we reproduce the following report submitted by the United States Public Health Service:

"The following is a detailed report of anti-plague operations of the U. S. Public Health Service in San Francisco, California, for the month ended August 31, 1913:

Date of last case of human plague.....	January 30, 1908
Date of last case of rodent plague.....	October 23, 1908
No. of premises inspected	5,684
No. of premises destroyed (by owners).....	45
No. of nuisances abated	779
No. of poisons placed	166,000
No. of rats found dead	93
No. of rats trapped	6,590
No. of rats identified	7,790
Mus norvegicus, 5,009; mus alexandrinus, 707; mus rattus, 964; mus musculus, 1,110.	
No. of rats bacteriologically examined	5,839
No. of rats taken dead from steamers after fumigation (not included above)	
China	Alexandrinus 3
Siberia	Alexandrinus 14
Acapulco	Rattus, 73; Alexandrinus 73
Algoa	Alexandrinus 1
Enterprise	Musculus 1
Persia	Rattus, 7; Alexandrinus 13
2 gophers, 2 squirrels.	

J. D. LONG.
Surgeon in Charge Field Operations.

REPORT OF CITY PHYSICIAN, N. ROSENCRANTZ, M. D.

Owing to the pressing need of the services of a City Physician, this position was re-created after remaining vacant for some months, this official assuming his duties on August 1st.

A brief statement of the work performed during this month is herewith given:

Visits to residences.....	28
Visits to City Prison	14
Medical patients at City Prison	26
Vaccinations performed:—	
At City Prison	53
At Emergency Hospitals	33
Redressings—at Emergency Hospital	140
Total visits made	42

RABIES.

No human cases of this malady developed during the month.

Seven examinations of suspected animals were made. Three "positive" cases were reported by the Director of Laboratories: 1 dog, 1 cat, 1 horse. Three proved "negative" while one showed as "doubtful."

PASTEUR TREATMENTS.

No. patients beginning treatments in August.....	1
No. patients completed treatments in August.....	2
Total treated in August	3
Virus injections administered	15
Total number of persons completed treatments to Aug. 31, 1913.....	186

DOG CATCH

The following figures were furnished by the Public Pound:

	Dogs Impounded	Destroyed
August, 1912.....	644	551
August, 1913.....	700	482

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of September, 1913.

Five hundred and nineteen (519) deaths were registered during the month, 21 more than in the preceding month. The annual death rate for August was 12.57 per thousand population. This month it is 13.10.

The table here presented will show the rise and fall of the death rate for the month of September from the year 1907 to 1913:

Deaths from some of the principal causes during the same period are also shown:

DEATHS.

Variola	9	12	0	0	3	14	2
Pneumonia	*	13	26	43	30	33	37
Tuberculosis (Pul.)	*	88	112	93	75	76	125
†Typhoid fever	39	22	26	35	48	23	23
†Local origin	*	*	15	17	28	6	10

*Cases not reported.

Diphtheria shows 15 cases more than in August.
 Scarlet fever 4 cases more
 Variola 2 cases more
 Measles 7 cases less
 Whooping cough 9 cases more
 Chickenpox 6 cases more
 Mumps 9 cases less

SCHOOL HEALTH INSPECTION.

The report of this division appearing on page 16 will prove to be most interesting as showing the additional work that is being accomplished with a full corps of nurses.

Eighty-two schools out of the total eighty-five operating in the city are now covered by inspection. During the month 42,138 school children were under observation and of this number 14,240 were examined by the School Nurses, while 1,106 were examined by the Chief Medical Inspector and his two Assistants.

547 visits were made to schools and 713 home visits covered.

Exclusions numbering 520 were made for the following reasons:

Children found suffering with diphtheria, 8; with scarlet fever, 10; with whooping cough, 62; with measles, 4; with mumps, 36; with chickenpox, 15; contagious skin diseases, 7; contacts, 378.

Reference should be made to the detailed report on page 16 in order to appreciate the magnitude of this work.

CONDEMNATION OF INSANITARY STRUCTURES.

The Board of Health resumed its sittings during this month after its annual vacation and 22 new cases were presented for hearing in condemnation proceedings and 15 re-hearings were taken up. Nuisances were abated as follows: By repair, 4; by demolition, 31; by vacation, 2.

As a result of this work 99 insanitary structures were demolished, i. e., refugee shacks, 65; stables, 6; other structures, 28.

I reproduce herewith the following report of the Public Health Service covering this month:

"The following is a detailed report of anti-plague operations of the United States Public Health Service in San Francisco, California, for the month ended September 20, 1913:"

Date of last case of human plague.....	January 30, 1908
Date of last case of rodent plague.....	October 23, 1908
No. of premises inspected.....	6,808
No. of premises destroyed (by owners).....	56
No. of nuisances abated.....	692
No. of poisons placed.....	207,700
No. of rats found dead.....	93
No. of rats trapped.....	6,228
No. of rats identified.....	7,253
Mus norvegicus, 4,645; mus alexandrinus, 671; mus rattus, 1,001; mus musculus, 936.	
No. of rats bacteriologically examined.....	5,413 neg.
No. of garbage cans stamped.....	1,227
No. of rats taken dead from steamers after fumigation (not included above)	
Peru	Rattus, 19; Alexandrinus, 12
Nile	Rattus, 1; Alexandrinus, 17
Ranier	Rattus, 25; Alexandrinus, 21
Pennsylvania	Rattus, 32; Alexandrinus, 1
Jason	Musculus, 11; Rattus, 2; Alexandrinus, 0
Wilhelmina	Rattus, 0; Alexandrinus, 1
Wilhelmina (Trapped after fumigation).....	Rattus, 1

Respectfully,
J. D. LONG,
Surgeon in Charge Field Operations.

REPORT OF CITY PHYSICIAN, N. ROSENCRANTZ, M. D.

Herewith is presented a summary of the work performed by the City Physician during this month:

Visits to residences.....	44
Treated at office.....	44
Total.....	88
Two surgical operations performed.	
Visits to City Prison (daily).....	25
New medical cases treated.....	51
Old medical cases treated.....	110
Total.....	161
5 surgical operations performed.	
39 chronic hypo morphinists treated.	
Vaccination Record:—	
Vaccinated at Central Emergency Hospital.....	31
Vaccination redressings.....	90
Vaccinations at City Prison.....	150
Total.....	271
3 specimens taken and sent to Laboratory for analysis.	

RABIES.

No human cases of this disease were reported during the month.

The Director of Laboratories reports that 6 examinations of suspected animals were made, 2 dogs and 1 cat proving "positive," 2 dogs "negative," one "doubtful."

PASTEUR TREATMENTS.

Three patients began treatment during this month and three completed treatment. 75 virus injections were administered since February, 1912; to date 189 persons have taken the Pasteur treatment.

DOG CATCH

	Impounded	Destroyed
September, 1912.....	739	581
*September, 1913.....	668	404

*Cats to the number of 509 were also destroyed.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of October, 1913.

Six hundred and twenty-four deaths were registered during the month, 105 more than in the preceding month. The death rate for September was 13:10 per one thousand population. This month it is 15:75.

The table here presented will show the rise and fall of the death rate for the month of October from the year 1907 to 1913 (both inclusive).

Deaths from some of the principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913
Total from all causes	529	498	518	572	541	564	624

External causes	50	49	57	38	36	55	71
Est. Pop. 425,000	Est. Pop. 475,000						
Annual rate per 1,000 population.....	14.88	14.04	13.08	14.44	13.65	14.23	15.75

BIRTHS

Births registered total 694 against 623 in September. 590 was the record for October, 1911 and 583 for the corresponding month of 1910. The annual birth rate in 1910 was 14.72, in 1911 it was 14.90. This month it is 17.53.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1907.

COMMUNICABLE DISEASES REPORTED

The following table will show the number of cases of principal communicable diseases reported during the month of October since the year 1907. These comparisons will probably prove of interest, showing as they do the fluctuations of those diseases for the same period of the different years:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	41	36	31	22	16	30	32
Scarlet Fever	13	56	33	25	16	9	18
Measles	4	79	18	36	208	3	6
Mumps	*	13	6	28	16	74	29
Whooping Cough	2	37	36	15	36	10	83
Chickenpox	6	33	25	52	60	34	74
Variola	15	34				1	1
Pneumonia	*	12	50	46	34	15	33
Tuberculosis (Pul.)	*	131	132	131	125	84	134
†Typhoid Fever	54	40	42	20	74	32	38
†Local origin	*	*	23	12	54	20	17

*Cases not reported.

Diphtheria shows an increase of 3 cases as compared to the month of September just closed.

Variola	1 case less.
Scarlet fever	7 cases less.
Measles	3 cases less.
Whooping cough	36 cases more.
Chickenpox	50 cases more.
Typhoid fever	15 cases more.

SCHOOL HEALTH INSPECTION.

On page 16 appears a full tabulated report of the work that is being done in this division and should be consulted for the details of this important branch of Health Department labor. The following data has been taken from said report and is reproduced here as being of interest:

42,800 children in 82 schools are under inspection and observation.

8,656 pupils were examined by school nurses during the month and 966 were passed upon by the medical staff.

426 "school" visits were made by the nurses and 596 "home" visits were covered during the same period.

250 children were excluded from attendance for the following reasons:

Found afflicted with diphtheria 12, with Scarlet Fever 11, with Chickenpox 22, with Measles 12, with Mumps 5, with Whooping Cough 45, with Trachoma 1. In addition to these 142 "contacts" to various ailments were barred from attendance, pending expiration of quarantine period.

CONDEMNATION OF INSANITARY PREMISES.

Sixteen "new" cases were presented to the Board of Health for hearing in "condemnation" proceedings and twenty-seven "re-hearings" were also acted upon.

Seven nuisances were abated, 2 by repair, 5 by demolition.

One refugee shack, one stable and three other structures were demolished as a partial result of these proceedings.

Herewith is reproduced the report of the U. S. Public Health Service, which is continually co-operating with this Board in the work of sanitation.

"The following is a detailed report of the anti-plague operations of the U. S. Public Health Service in San Francisco, California, for the month ended October 31, 1913:"

Date of last case of human plague	January, 30, 1908
Date of last case of rodent plague	October 23, 1908
No. of premises inspected	8,148
No. of premises destroyed (by owners)	22
No. of nuisances abated	923
No. of poisons placed	386,200
No. of rats found dead	74
No. of rats trapped	6,696
No. of rats identified	7,940
Mus norvegicus 5,127; mus alexandrinus, 560;	
Mus rattus, 1,027; Mus musculus, 1,273.	
No. of rats bacteriologically examined, (negative)	5,500
No. of garbage cans stamped	2,000
Squirrels, 2; Weasel, 1.	
No. of rats trapped on steamers after fumigation, (not included above).	
Hong Kong, Alexandrinus, 1;	
Umatilla, Alexandrinus, 1.	

No. of rats taken dead from steamers after fumigation, (not included above.)

Respectfully,

J. D. LONG,

Surgeon in Charge Field Operations.

REPORT OF CITY PHYSICIAN N. ROSENCRANTZ, M. D.

The following shows the work done in this branch of the Division of Public Charities during the month of October:

Field Work:	
Visits to residences	53
Treated at office	47
Total	100
City Prison Work:	
Visits to city prison (daily)	34
New Medical cases treated	80
Old medical cases treated	159
Total	239
Vaccination Record:	
Vaccinations at Central Emergency Hospital	11
Redressings	30
Vaccinations at City Prison	242
Total	283

RABIES.

No human cases recorded during this month.

The report of the Bacteriologist shows 8 examinations of animals: 7 dogs, 1 horse, 2 cases in dogs proved "positive"; 5 negative, 1 horse, negative.

PASTEUR TREATMENTS.

Five persons began treatment during the month and one completed treatment.

Ninety-four virus injections were administered. From February 1912 to date, 190 persons have submitted to this treatment.

DOG CATCH

	Impounded	Destroyed
October, 1912	603	420
*October, 1913	642	429

*350 cats also destroyed.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the month of November, 1913.

Five hundred and twenty-eight deaths were registered during the month, 96 less than in the preceding month. The annual death rate for October was 15.75 per thousand population. This month it is 13.33.

The table here presented will show the rise and fall of the death rate for the month of November from the year 1907 to 1913. The number of deaths from some of the principal diseases during the same period are also shown:

Annual rate per 1,000 population.....	17.88	14.64	13.44	13.77	15.00	13.63	13.33

BIRTHS

Births registered total 625 against 694 in October just closed and 570 in November of 1912. The annual birth rate for November 1911 was 12.96; in 1910 it was 14.10. This month it is 15.78.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1906-7.

COMMUNICABLE DISEASES.

The following table will show the number of cases of principal contagious diseases reported during the month of November since the year 1907:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	45	56	37	28	24	41	43
Scarlet fever	17	66	50	40	22	14	30
Measles	9	213	42	47	245	14	11
Mumps	*2	31	10	89	22	159	23
Whooping cough	*4	19	37	17	47	18	40
Chickenpox	5	63	55	50	77	96	77
Variola	7	16	4	—	1	12	4
Pneumonia	*	18	56	57	34	35	31
Tuberculosis (Pul)	*	94	104	101	111	105	105
†Typhoid fever	41	30	28	25	37	20	28
†Local origin	*	*	22	12	23	7	15

*Cases not reported.

Diphtheria shows an increase of 11 cases over the month of October just closed.

Scarlet fever	12 cases more
Variola	3 cases more
Measles	5 cases more
Whooping cough	43 cases less
Chickenpox	3 cases less
Typhoid fever	10 cases less

SCHOOL HEALTH INSPECTION.

42,631 children enrolled in the 82 schools under inspection were under observation during the month—489 "school" and 573 "home" visits were made.

16,913 pupils were examined by the Nurses and 876 by the members of the medical staff.

34 exclusions from school were made on account of chicken pox, for diphtheria 6, for measles 13, for mumps 4, for tonsillitis 19, for whooping cough 5, for contagious skin diseases 7. These do not include 137 "contacts" also excluded.

See page 16 for full detailed report of this Bureau.

CONDEMNATION OF INSANITARY BUILDINGS.

17 new cases for condemnation proceedings were presented to the Board of Health, and 37 "rehearings" were passed upon. 15 nuisances were abated, 7 by repair, and 8 by demolition. The structures demolished included 3 stables and 6 nondescript buildings.

The report of the United States Public Health Service is herewith reproduced:

"The following is a detailed report of anti-plague operations of the United States Public Health Service in San Francisco, California, for the month ended November thirtieth, nineteen thirteen:"

Date of last case of human plague.....	January 30, 1908
Date of last case of rodent plague.....	October 23, 1908
No. of premises inspected	4,792
No. of premises destroyed	14

Respectfully,

J. D. LONG,

Surgeon in Charge Field Operations.

REPORT OF INSPECTOR OF INDIGENTS.

THERESA E. GILE (Graduate Nurse)—Inspector.

The report of this division for November is herewith reproduced as being of interest, inasmuch as this branch of the department is deemed to be of much importance regulating as it does the matter of admission to hospitals and other institutions, of those requiring treatment at the public expense.

Through the medium of this inspection abuse of privilege is prevented and only those who are a real charge upon the city are admitted for treatment and care.

DISPOSAL OF PATIENTS APPLYING FOR HOSPITAL CARE DURING NOVEMBER, 1913.

Sent to City and County Hospital.....	256
Recurrent Infirmary cases.....	14
Sent to San Francisco Relief Home.....	33
Recurrent Relief Home cases	18
Sent to S. F. Tuberculosis Hospital	43
Recurrent Tubercular cases	30
Sent to Isolation Hospital	6
Referred to Clinics for treatment.....	40
Referred to Clinics for dressings.....	5
Referred to Clinics for medicine.....	8
Referred to Societies	12
Referred to relatives	9
Applicants referred to own county.....	7
Investigations	333
Number of calls	56

LENGTH OF RESIDENCE OF NON-RESIDENTS APPLYING FOR HOSPITAL CARE, MONTH OF NOVEMBER, 1913.

Less than one week	8
Less than one month	7
Less than two months	9
Less than three months	4

DISPOSAL OF ABOVE APPLICANTS.

Sent to S. F. Tuberculosis Hospital.....	6
Sent to City and County Hospital.....	22
Residents refused San Francisco Infirmary.....	5
Residents refused S. F. Relief Home.....	4
Collected \$32.00 for care of patients able to pay.	

REPORT OF CITY PHYSICIAN N. ROSENCRANTZ, M. D.

Field Work:—

Visits to residences	70
Treated at office	28

Total 98

Took up work of investigation of accident cases occurring on Geary Street Municipal Railway from November 15th. Five cases handled during the past month.

Vaccination Record:—

Vaccinated at City Prison.....	228
4 specimens taken and sent to Bacteriological Laboratory for analysis.

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of December, 1913.

Six hundred and thirty-three (633) deaths were registered during the month, 105 more than in the preceding month. The annual death rate for November was 13.33 per thousand population. This month it is 15.98.

The table here presented will show the rise and fall of the death rate for the month of December from the year 1907 to 1913.

Deaths from some of the principal diseases during the same period are also shown:

DEATHS.

	1907	1908	1909	1910	1911	1912	1913

BIRTHS.

Births registered total 641 against 625 in November just closed and 581 in the corresponding month of 1912. The annual birth rate for December, 1912, was 14.67; in 1911 it was 13.71. This month it is 15.78.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1907-08:

CONTAGIOUS DISEASES REPORTED.

The following table will show the number of cases of principal contagious diseases reported during the month of December since the year 1907:

	1907	1908	1909	1910	1911	1912	1913
Diphtheria	58	51	51	32	27	49	43
Scarlet fever	8	61	50	43	46	15	30
Measles	13	24	55	74	476	8	21
Mumps	*1	45	*1	49	22	140	13
Whooping cough	*	6	33	15	20	4	57
Chickenpox	29	60	57	50	74	78	89
Variola	38	19	6	4	—	6	2
Pneumonia	*	29	45	40	82	67	41
Tuberculosis (pulmonary)	*	103	136	134	108	107	104
†Typhoid fever	37	35	24	45	18	27	32
†Local origin	*	*	15	28	13	13	20

*Cases not reported.

Diphtheria shows the same number of cases as the month of November just closed.

Scarlet fever same number of cases
 Variola 2 cases less
 Measles 10 cases less
 Whooping cough 15 cases more
 Chickenpox 12 cases less
 Typhoid fever 4 cases more

SCHOOL HEALTH INSPECTION.

42,569 children in 82 schools were under inspection during this month, 8,373 of these being examined by nurses and 1,100 by the medical inspectors. 458 visits to schools were made and "home" visits to the number of 802 were covered.

296 "exclusions" were enforced for the following diseases:—Diphtheria 10, scarlatina 11, whooping cough 29, measles 8, mumps 14, chickenpox 55, tonsilitis 15. In addition to the foregoing, "contacts" to the number of 154 were also excluded from attendance. A tabulated report with full details of the work done in this division appears on page 16.

CONDEMNATION OF INSANITARY BUILDINGS.

As a result of Board action, 8 insanitary structures were demolished during this month, consisting of two stables and 6 "temporary" buildings. Sixteen "new" cases for condemnation proceedings were presented and 22 rehearings were acted upon.

In conjunction with this work of general sanitation, I herewith present the following report of the Federal service:—

"The following is a detailed report of anti-plague operations of the U. S. Public Health Service in San Francisco, California, for the month ended December 31, 1913:—

Date of last case of human plague.....	January 30, 1908
Date of last case of rodent plague.....	October 23, 1908
No. of premises inspected.....	5,052
No. of premises destroyed.....	10
No. of nuisances abated.....	695
No. of poisons placed.....	330,500
No. of rats found dead.....	32
No. of rats trapped.....	6,392
No. of rats identified.....	7,742
M. norvegicus, 4,662; m. alexandrinus, 713; m. rattus, 1,049; m. musculus, 1,318.	
No. of rats bacteriologically examined.....	6,101 neg.
No. of garbage cans stamped.....	1,543
No. of rats taken dead from steamers after fumigation (not included above)—

J. D. LONG,
Surgeon, in charge Field Operations."

CANINE RABIES

The Director of Laboratories reports 4 examinations of dog "suspects" during the month, 3 proving "positive," one working out "negative." Of the "positive" cases one was a Fox terrier, 1 a cocker spaniel and 1 mongrel.

The records of the Public Pound show the following comparative figures:

	Dogs Impounded	Dogs Destroyed
December, 1912	565	444
*December, 1913	398	308

*161 Cats also destroyed.

In December, 1912, there were 12 "positive" cases of this disease out of 22 animals examined. On comparison this would indicate that the malady has decreased to a large extent.

PASTEUR TREATMENTS

To December 31, 1913, two hundred persons had submitted to and completed the Pasteur treatment. 1 patient began treatment during this month, and 4 completed treatment, 59 virus injections being administered.

REPORT OF INSPECTOR OF INDIGENTS.

THERESA E. GILE (Graduate Nurse)—Inspector.

DISPOSAL OF PATIENTS APPLYING FOR HOSPITAL CARE DURING DECEMBER, 1913.

Sent to City and County Hospital.....	224
Recurrent Infirmary Cases	20
Sent to San Francisco Relief Home	27
Recurrent Relief Home cases	5
Sent to S. F. Tuberculosis Hospital	36
Recurrent Tubercular cases	21
Sent to Isolation Hospital	16
Sent to Lane Hospital	2
Sent to University of California Hospital	6
Sent to California Refuge for Girls	3
Sent to Detention Hospital	2
Sent to Associated Charities	8
Investigations	356
Number of calls	105
Refused from San Mateo County	8
Refused from Fresno County	12
Refused from Modoc County	1

LENGTH OF RESIDENCE OF NON-RESIDENTS APPLYING FOR HOSPITAL CARE, MONTH OF DECEMBER, 1913.

Less than one week	2
Less than one month	4
Less than two months	2
Less than three months	8

DISPOSAL OF ABOVE APPLICANTS

Sent to S. F. Tuberculosis Hospital	4
Sent to City and County Hospital	10
Sent to Isolation Hospital	2
Residents refused San Francisco Infirmary	10
Residents refused S. F. Relief Home	11

CASH RECEIVED FOR ASSISTANCE OF INDIGENTS

From Associated Charities	\$ 5.00
From Mayor's Office	5.00
From Chief of Police	10.00
Total	\$ 20.00
Collected \$22.50 for care of patients able to pay.	

REPORT OF CITY PHYSICIAN N. ROSENCRANTZ, M. D.

Field Work:—

Visits to Residences	52
Investigation of accidents—Geary St. Municipal line.....	4
Investigation of accidents—Union St. Municipal line	1
Visits to City Prison	25
Total	82
Patients treated at office	17

Treatments administered:—

Medical (new cases)	91
Medical (old cases)	54
Total	145
Vaccinations at City Prison	317
Specimens taken for Bacteriological analysis	1

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of January 1914.

Six hundred and eleven (611) deaths were registered during the month, 22 less than in the preceding month. The annual rate for December was 15.98 per thousand population. This month it is 15.43. The table here presented will show the rise and fall of the death rate for the month of January, from the year 1908 to 1914.

The number of deaths from principal causes during the same period are also shown:

DEATHS.

	1908	1909	1910	1911	1912	1913	1914
Total from all causes.....	629	553	601	615	649	752	611

	Est. pop. 425,000			Est. pop. 475,000			
Annual rate per 1,000 population.....	17.76	13.92	15.58	15.52	16.39	18.99	15.43

BIRTHS.

Births registered total 605 against 641 in December just closed. In January, 1913, the registration was 592. The annual birth rate for January, 1913, was 14.95; in 1912 it was 15.15. This month it is 15.27.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1907-8.

COMMUNICABLE DISEASES REPORTED.

The following table will show the number of cases of principal communicable diseases reported during the month of January since the year 1908:

	1908	1909	1910	1911	1912	1913	1914
Diphtheria	59	53	55	40	29	39	44
Scarlet fever	17	47	59	79	46	18	36
Measles	21	272	81	57	1028	13	46
Mumps	3	42	2	55	38	249	30
Whooping cough	2	37	58	16	41	45	122
Chickenpox	45	70	65	52	74	141	193
Variola	38	4	4	6		7	12
Pneumonia	49	32	78	50	90	74	37
Tuberculosis (pulmonary)	83	121	170	124	131	107	119
†Typhoid fever	21	13	17	20	15	24	28
†Local origin	*	*	*	9	11	7	13

*Cases not reported.

Diphtheria shows an increase of 1 case over the month of December just closed.

Scarlet fever	6 cases more
Variola	10 cases more
Measles	25 cases more
Whooping cough	65 cases more
Chickenpox	104 cases more
Typhoid fever	4 cases less

SCHOOL HEALTH INSPECTION.

Of the foregoing mentioned communicable diseases the following were discovered and reported by the nurses in the Division of School Health Inspection, i. e., Diphtheria 9, Scarlet Fever 11, Measles 8, Mumps 12, Whooping Cough 111, Chickenpox 141.

In addition to these cases, four of Tonsilitis were found and 268 "contacts" were ordered excluded from school attendance.

83 schools with an enrollment of 43,436 pupils were under inspection during this month. 574 "school" visits were covered and 891 "home" visits were made.

12,952 pupils were examined and passed upon by the nurses corps, and 948 were examined by the Medical Inspector.

See page 16 for the detailed report of work accomplished in this division.

CONDEMNATION OF INSANITARY BUILDINGS.

17 new cases were presented to the Board for action in condemnation proceedings, and 24 "re-hearings" were disposed of.

27 "abatement of nuisances" was the result of the month's work, and 20 insanitary structures were demolished, 6 of these being refugee shacks, 4 stables and 10 other structures.

In connection with this work of general sanitation the Federal officer in charge of Field Operations submits the following statement:

"The following is a detailed report of anti-plague operations of the United States Public Health Service in San Francisco, California, for the month ended Jan. 31, 1914:

Date of last case of human plague.....	January 30, 1908
Date of last case of rodent plague.....	October 23, 1908
No. of premises inspected.....	6,747
No. of premises destroyed.....	20
No. of nuisances abated.....	688
No. of poisons placed.....	302,900
No. of rats found dead.....	60
No. of rats trapped.....	5,858
No. of rats identified.....	7,001
One Squirrel	

M. norvegicus, 3,980; m. alexandrinus, 858; m. rattus, 1,079; m. musculus, 1,084.

No. of rats bacteriologically examined..... 4,026 neg.

No. of garbage cans stamped..... 1,013

No. of rats taken dead from steamers after fumigation (not included above)—

	Rattus	Alexandrinus	Musculus
Str. Strathdom	0	0	0
Str. Korea	0	0	0
Ship Campigny	0	0	0
Str. Sherman	0	0	0
Str. Chiyo Maru	0	112	0
Bark Marie	6	33	2
Str. Eureka	89	41	0
Str. City of Para	0	17	0
Str. Vienna	95	13	0
Str. China	0	1	0

Respectfully,

J. D. LONG,
Surgeon, in charge Field Operations."

CANINE RABIES

No human cases of this malady were recorded during the month.

The Director of Laboratories reports 3 examinations of dog "suspects," 2 of which proved positive and 1 doubtful.

In January, 1913, there were nine "positive" cases in animals reported and no human cases developed during that month.

PASTEUR TREATMENTS

1 person began treatment during the month. The total number of treatments completed since February, 1912, amounts to 201.

The following figures were furnished by the Public Pound:

	Dogs Impounded	Dogs Destroyed
January, 1913	587	415
*January, 1914	352	248

*151 cats also executed.

REPORT OF INSPECTOR OF INDIGENTS.

THERESA E. GILE (Graduate Nurse)—Inspector.

DISPOSAL OF PATIENTS APPLYING FOR HOSPITAL CARE DURING JANUARY, 1914.

Sent to City and County Hospital.....	253
Recurrent Infirmary Cases	60
Sent to San Francisco Relief Home.....	62
Recurrent Relief Home Cases	10
Sent to S. F. Tuberculosis Hospital.....	42
Recurrent Tubercular Cases	12
Sent to Isolation Hospital	20
Sent to University of Cal. Hospital.....	10
Sent to California Refuge for Girls.....	5
Sent to Detention Hospital.....	3
Sent to Associated Charities.....	12
Investigations	412
Number of Calls	64
Refused from other counties.....	23

INCREASES OVER MONTH OF DECEMBER, 1913.

City and County Hospital, increase over December.....	31 cases
Relief Home	35 "
Tuberculosis Hospital	12 "
Isolation Hospital	4 "
University of Cal. Hospital, increase in beds over December	8
Residents refused San Francisco Infirmary	12
Residents refused San Francisco Relief Home.....	11

CASH RECEIVED FOR ASSISTANCE OF INDIGENTS

For Relief Home	\$ 60.00
For City and County Hospital	5.00
Total	\$ 65.00

REPORT OF CITY PHYSICIAN N. ROSENCRANTZ, M. D.

Field Work—

Visits to Residences	53
Investigation of accidents—Geary St. Mun. Ry.	5
Investigation of accidents—Union St. Mun. Ry.	2
Visits to City Prison	26
Total	86
Patients treated at office	11

Treatments Administered at City Prison:—

Medical cases (new)	70
Medical cases (old)	40
Total	110
Vaccinations performed at City Prison	246

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For the Month of February, 1914.

Five hundred and eighty-seven (587) deaths were registered during the month, 24 less than in the preceding month. The annual death rate for January was 15.43 per thousand population. This month it is 14.82.

The table here presented will show the rise and fall of the death rate for the month of February from the year 1908 to 1914. The number of deaths from some of the principal diseases during the same period are also shown:—

DEATHS.

	1908	1909	1910	1911	1912	1913	1914
Total from all causes.....	552	531	502	505	615	565	587
Including death from—							
Tuberculosis (pulmonary)	82	55	56	56	71	54	76
Pneumonia (Lobar)	47	23	30	27	39	34	25
Organic heart disease	63	68	58	91	80	85	76
Cancer (all organs, etc.)	35	39	37	28	36	44	53
Brights Disease	28	39	30	23	42	50	39
Diseases digestive system	38	37	43	37	56	39	39

Diphtheria	11	6	3	2	3	3	6
Scarlet fever		1			1		
Whooping cough		3	3	1	2	1	10
Diseases early infancy	15	29	24	14	23	13	17
Old age	6	16	10	5	7	6	6
External causes	57	51	53	48	53	52	63
Est. pop. 425,000	Est. pop. 475,000						
Annual rate per 1,000 population.....	15.48	13.40	12.67	12.75	15.43	14.26	14.82

BIRTHS.

Births registered total 585 against 605 in January just closed and 607 in the corresponding month of 1913. The annual birth rate for February, 1913, was 15.32, in 1912 it was 13.94. This month it is 14.77.

The comparative table of births appearing on page 8 will show the rise and fall of the birth rate by months since 1907-8.

COMMUNICABLE DISEASES REPORTED.

The following table will show the number of cases of principal communicable diseases reported during the month of February since the year 1908:—

	1908	1909	1910	1911	1912	1913	1914
Diphtheria	89	54	79	25	22	42	46
Scarlet fever	24	25	60	47	25	36	73
Measles	63	348	96	92	1160	35	103
Mumps	5	75	7	49	41	459	30
Whooping cough	3	20	28	27	46	21	227
Chickenpox	20	61	65	67	65	267	174
Variola	22	8	10			3	10
Pneumonia	*	23	47	35	65	68	50
Tuberculosis (pulmonary)	*	112	124	95	100	118	129
†Typhoid fever	6	6	17	10	16	22	25
†Local origin	*	*	14	7	6	8	16

*Cases not reported.

Diphtheria shows an increase of 2 cases over the month of January just closed.

Scarlet fever.	37 cases more
Variola	2 cases less
Measles	57 cases more
Whooping cough	105 cases more
Chickenpox	16 cases less
Typhoid fever	3 cases less

SCHOOL HEALTH INSPECTION.

40,735 pupils in 83 schools were under inspection during the month. Of these, 13,451 were examined by nurses, and 984 by Medical Inspectors.

Of the communicable diseases shown in the preceding table the school nurses discovered 10 cases of diphtheria, 32 of scarlet fever, 46 of measles, 22 of mumps, 145 of whooping cough and 127 of chickenpox.

In addition to these there were 9 cases of tonsilitis, and 2 of trachoma located, while 341 "contacts" were also excluded from attendance at school.

On page 16 will be found a detailed report of the work of this division.

CONDEMNATION OF INSANITARY BUILDINGS.

Sixteen cases were brought before the Board of Health during this month for hearing in condemnation proceedings while nine re-hearings on continued cases were also taken up.

A total of 44 insanitary premises were declared "abated," 16 by repair, 27 by demolition and 1 by vacation; these consisting of 25 refugee shacks, 1 stable, 1 nondescript structure.

We include as a part of Board action work the report of the Federal Officer in charge of field operations:—

"The following is a detailed report of anti-plague operations of the United States Public Health Service in San Francisco, California, for the month ended Feb. 28, 1914:—

Date of last case of human plague.....	January 30, 1908
Date of last case of rodent plague.....	October 23, 1908
No. of premises inspected.....	5,698
No. of premises destroyed.....	24
No. of nuisances abated.....	992
No. of poisons placed.....	179,733
No. of rats found dead.....	41
No. of rats trapped.....	4,569
No. of rats identified.....	5,609
M. norvegicus, 3,258; m. alexandrinus, 625; m. rattus, 726; m. musculus, 1,000.	
One Squirrel	
No. of rats bacteriologically examined.....	4,532 neg.
No. of rats taken dead from steamers after fumigation (not included above)—	

	Rattus	Alexandrinus	Musculus
Steamer Aztec	13	18	0
Str. Falls of Clyde	---	3	0
Str. Coos Bay	58	23	0
Str. Ramses	---	---	0
Str. Nile	2	13	0
Transport Thomas	5	4	0
Str. Algoa	19	20	0
Sc. Wm. Bowden	13	16	0
Str. Shabonee	---	---	0
City of Sydney	---	41	1
Nippon Maru	12	38	0
Sc. Annie Johnson	---	---	30

Respectfully,
J. D. LONG,
Surgeon, in charge Field Operations."

CANINE RABIES

The Director of Laboratories reports 8 examinations of dog "suspects" during the month, 2 of which worked out "positive," 6 "negative."

In February of 1913 there were 21 "positive" cases in dogs, and one human case which resulted fatally, also developed during that month.

For comparative purposes the following figures taken from the records of the Public Pound, are given:—

	Dogs Impounded	Dogs Destroyed
February, 1913	613	439
*February, 1914	399	257

*184 Cats also destroyed.

PASTEUR TREATMENTS

3 patients began this treatment during the month, and 2 of these completed treatment. Since October, 1911, a total of 201 persons have taken this treatment.

REPORT OF INSPECTOR OF INDIGENTS.

THERESA E. GILE (Graduate Nurse)—Inspector.

DISPOSAL OF PATIENTS APPLYING FOR HOSPITAL CARE DURING FEBRUARY, 1914.

Sent to the City and County Hospital.....	205
Recurrent Infirmary cases	38
Sent to San Francisco Relief Home	42
Recurrent Relief Home cases	10
Sent to S. F. Tuberculosis Hospital	55
Recurrent Tubercular cases	20
Sent to Isolation Hospital	13
Sent to Associated Charities	14
Sent to Children's Hospital	6
Sent to Clinics	91
Sent to University of California Hospital	10
Investigations	506
Number of Calls	83
Refused from other counties	96

CASH RECEIVED FOR ASSISTANCE OF INDIGENTS

Received for Relief Home	\$ 45.00
Received for City and County Hospital	12.00

REPORT OF CITY PHYSICIAN N. ROSENCRANTZ, M. D.

Field Work:—

Visits to residences	66
Investigation of accidents—Geary St. Municipal Ry.....	8
Liability and Compensation Act	2
Visits to City Prison	22
Total	98
Patients treated at office	19

Treatments administered at City Prison:—

Medical cases (new)	85
Medical cases (old)	41
Total	136
Vaccinations performed at City Prison	216
Total number of all visits made	447
